

# Contents

<b>Chapter I A Brief Historical Excursus</b> . . . . .	1
1. Introduction . . . . .	1
1.1. Production as a characteristic of human societies . . . . .	1
1.2. Two notions of “wealth” . . . . .	2
1.3. Natural resources and produced wealth . . . . .	2
1.4. Beyond economic analysis . . . . .	3
1.5. Interindustry analysis . . . . .	4
2. François Quesnay . . . . .	5
2.1. The <i>Tableau Économique</i> . . . . .	5
2.2. A graphical representation . . . . .	6
2.3. A double-entry table . . . . .	7
3. David Ricardo . . . . .	8
3.1. A one-sector model . . . . .	8
3.2. A two-sector model . . . . .	12
3.3. The essential features of the Ricardian system . . . . .	15
3.4. Extension to many sectors . . . . .	16
3.5. Unresolved problems . . . . .	17
4. Karl Marx . . . . .	19
4.1. Simple reproduction . . . . .	19
4.2. Marx’s own solution of the “transformation problem” . . . . .	20
4.3. Bortkiewicz’ solution . . . . .	22
5. The Marginalists . . . . .	24
5.1. The “pure exchange” model and the optimum allocation of resources . . . . .	24
5.2. Léon Walras . . . . .	26
5.3. Knut Wicksell . . . . .	27
6. Wassily Leontief and Piero Sraffa . . . . .	32
<b>Chapter II The Transactions, or Input–Output, Table</b> . . . . .	35
1. A simple economic system and its transactions table . . . . .	35
1.1. Remarks on method . . . . .	35
1.2. The commodity flows . . . . .	35

1.3. A distinction between technical requirements and consumption requirements . . . . .	36
1.4. The input-output table . . . . .	37
1.5. Notions of national accounting . . . . .	39
2. Practical devices and procedures . . . . .	40
2.1. Adjusting the theoretical scheme to meet empirical reality . . . . .	40
2.2. Problems of aggregation and disaggregation . . . . .	40
2.3. The calendar year as the time unit . . . . .	41
2.4. Peculiar "industries" . . . . .	41
2.5. The final sector . . . . .	42
2.6. The intermediate stages in the formation of prices . . . . .	43
2.7. Replacement of the means of production . . . . .	43
2.8. A practical procedure concerning net and gross investment . . . . .	44
2.9. An interindustry table for the stocks of capital goods . . . . .	44
3. Actual applications . . . . .	45
3.1. The main input-output tables compiled so far . . . . .	45
3.2. Planning aims and theoretical aims . . . . .	46
<b>Chapter III A Linear Model of Production . . . . .</b>	<b>48</b>
1. The transactions table in algebraic terms . . . . .	48
1.1. Back to a simplified economic system . . . . .	48
1.2. The transactions table . . . . .	48
2. An algebraic reformulation . . . . .	50
3. The accounting nature of the formulation used so far . . . . .	50
4. An interpretation of the $a_{ij}$ 's as coefficients of production . . . . .	51
5. Two systems of equations . . . . .	52
6. On the use of matrix algebra . . . . .	53
<b>Chapter IV The Leontief System . . . . .</b>	<b>54</b>
1. Two systems of linear equations . . . . .	54
2. The closed Leontief system . . . . .	55
2.1. The term "closed" explained . . . . .	55
2.2. A necessary condition for economically meaningful solutions . . . . .	55
3. The solutions of the closed system . . . . .	57
3.1. Relative prices and relative quantities . . . . .	57

3.2. A sufficient condition to ensure non-negative solutions . . . . .	58
4. The open Leontief system . . . . .	59
4.1. Asymmetry between the interindustry relations and the final sector . . . . .	59
4.2. The open system . . . . .	60
4.3. A "dual" price system . . . . .	61
5. The solution of the open system . . . . .	61
5.1. A unique solution . . . . .	61
5.2. Solution with economic meaning . . . . .	62
6. The labor requirements . . . . .	63
7. An economic interpretation of the inverse matrix . . . . .	63
7.1. The direct and indirect requirements . . . . .	63
7.2. Numerical example . . . . .	65
8. An iterative method of computing the Leontief inverse matrix . . . . .	66
8.1. Expansion as power series . . . . .	66
8.2. Economic meaning of the power series expansion . . . . .	67
9. The limitations of the Leontief system . . . . .	69
<b>Chapter V The Sraffa System . . . . .</b>	<b>71</b>
1. Production of commodities by means of commodities . . . . .	71
2. The assumptions . . . . .	71
3. The price system . . . . .	72
4. Search for a relation that may render the price system determinate . . . . .	74
5. Relative prices corresponding to various levels of the rate of profit . . . . .	74
5.1. Extreme cases and intermediate cases . . . . .	74
5.2. A pure labor theory of value . . . . .	75
5.3. The maximum rate of profit . . . . .	76
5.4. The viability condition . . . . .	78
5.5. A pure capital theory of value . . . . .	78
5.6. The general case . . . . .	80
5.7. Price changes as an effect of changes in the rate of profit . . . . .	82
6. The relationship between the wage rate and the rate of profit . . . . .	84

6.1. Income distribution and changes in the relative prices . . . . .	84
6.2. The special case of uniform capital intensity . . . . .	86
6.3. The general case . . . . .	87
7. Reduction of prices to "dated" quantities of labor . . . . .	89
7.1. A convergent series of quantities of labor . . . . .	89
7.2. A series of "layers" of wages and profits . . . . .	91
8. The system of physical quantities . . . . .	92
9. The "standard system" . . . . .	95
9.1. A logical exercise . . . . .	95
9.2. The viability condition once again . . . . .	97
9.3. "Standard commodity" and "standard net product" . . . . .	97
9.4. Labor embodied in the standard net product . . . . .	99
9.5. Numerical example . . . . .	101
10. Basic commodities and non-basic commodities . . . . .	104
10.1. Definitions . . . . .	104
10.2. A definition in terms of reducible and irreducible matrices . . . . .	104
10.3. A reformulation . . . . .	105
10.4. Numerical example . . . . .	107
10.5. The economic meaning of the distinction between basic and non-basic commodities . . . . .	108
10.6. Relations with the distinction between necessary and luxury goods . . . . .	108
10.7. An assumption on the physical own-rates of reproduction of the basic and non-basic commodities . . . . .	109
10.8. An unusual case . . . . .	110
11. Autonomy of the two systems considered (the price system and the physical quantity system) . . . . .	111
12. Price system and income distribution . . . . .	112
12.1. The standard net product as the <i>numéraire</i> of the price system . . . . .	112
12.2. The $\pi$ - $w$ relation in the standard system . . . . .	114
12.3. The same linear relation valid for the actual system, with the one proviso that $w$ be expressed in terms of the standard commodity . . . . .	115
12.4. No assumptions on returns to scale . . . . .	116
12.5. "Labor commanded" and the standard net product . . . . .	117
12.6. Perfect regularity of the "layers" of wages and profits in the standard net product . . . . .	118

12.7. The standard commodity and the theory of income distribution . . . . .	119
<b>Appendix to Chapter V. Marx's Problem of the "transformation of values into prices of production" . . . . .</b>	<b>122</b>
1. Introductory remark . . . . .	122
2. An "ideal" price system . . . . .	122
3. The "value system" . . . . .	123
4. The "price-of-production system" . . . . .	126
5. A comparison . . . . .	127
6. The "standard system" as a special case . . . . .	130
7. The "transformation of values into prices of production" . . . . .	134
8. Uniform "organic composition of capital", another special case . . . . .	137
9. The linear operator which effects the "transformation" . . . . .	140
10. Price system and rate of surplus value . . . . .	142
11. Numerical example . . . . .	144
12. Concluding remarks . . . . .	149
<b>Chapter VI The Choice of Technique . . . . .</b>	<b>151</b>
1. A multiplicity of methods of production . . . . .	151
2. The criterion of profitability . . . . .	151
2.1. Minimum cost . . . . .	151
2.2. Dependence on technology and on income distribution . . . . .	152
3. The choice of technique for non-basic commodities . . . . .	152
3.1. A choice made at the level of the single non-basic industry . . . . .	152
3.2. Limited effects of the choice . . . . .	155
4. The choice of technique for basic commodities . . . . .	155
4.1. A choice involving the economic system as a whole . . . . .	155
4.2. The technological frontier of income distribution possibilities . . . . .	156
4.3. Analytical properties of the technological frontier . . . . .	158
5. Choice of technique in general . . . . .	160
5.1. The problem stated . . . . .	160

5.2. Logical priority of the choice of technique for basic commodities . . . . .	161
5.3. Multiplicity of methods of production in all industries . . . . .	162
5.4. The case of different commodities being required by different techniques . . . . .	164
5.5. A synthesis . . . . .	166
6. "Nonsubstitution" . . . . .	167
6.1. Introductory remarks . . . . .	167
6.2. "Nonsubstitution theorems" . . . . .	167
6.3. Theoretical irrelevance of changes in the input proportions, and thus of substitution, in the general case . . . . .	168
7. Reswitching of technique and traditional capital theory . . . . .	169
7.1. Samuelson's "surrogate production function" . . . . .	169
7.2. Nonexistence in general of a monotonic relation between rate of profit and capital/output (and capital/labor) ratios . . . . .	171
7.3. The marginal theories of capital and income distribution called into question . . . . .	172
8. Misconceptions concerning an accounting expression . . . . .	174
8.1. Solow's "rate of return" . . . . .	174
8.2. An alternative verbal expression for "rate of profit" . . . . .	175
9. Concluding remarks . . . . .	177
<b>Appendix to Chapter VI. Linear programming, substitution, and the meaning of the price system . . . . .</b>	<b>180</b>
1. Introductory remark . . . . .	180
2. Linear programming . . . . .	180
3. A "dual" linear program . . . . .	182
4. Relations between the "primal" and the "dual" programs . . . . .	182
5. The phenomenon of substitution . . . . .	184
6. The traditional meaning of prices . . . . .	185
7. Nonsubstitution . . . . .	185
8. On substitution as a short-run phenomenon . . . . .	186
9. Irrelevance of substitution in the general case . . . . .	187
10. On "marginal productivities" . . . . .	188

11. Nonscarce goods with positive prices . . . . .	189
12. The meaning of production prices . . . . .	189
<b>Chapter VII An Introduction to Dynamic Production Models . . . . .</b>	<b>191</b>
1. Population growth and constant technical coefficients . . . . .	191
2. Physical growth and the price system . . . . .	192
2.1. Constant coefficients and growth of the labor force . . . . .	192
2.2. Growth of the physical quantities . . . . .	193
2.3. Net product divided between consumption and new investment . . . . .	193
2.4. Growth of total consumption and invariance of its composition . . . . .	194
2.5. New investments . . . . .	194
2.6. The dynamic-equilibrium solution . . . . .	195
2.7. The full-employment condition . . . . .	195
2.8. Implications for consumption choice . . . . .	196
2.9. Invariance of the price structure . . . . .	197
2.10. A rate of inflation . . . . .	198
3. The relation between per capita consumption and the rate of growth . . . . .	199
3.1. The price system and the physical quantity system as dual to each other . . . . .	199
3.2. A strictly decreasing relationship between per capita consumption and rate of growth . . . . .	200
3.3. The maximum rate of growth . . . . .	203
3.4. The particular cases of a linear relation . . . . .	204
3.5. The same relation valid for the actual system, provided that the net product and capital are evaluated at prices $\mathbf{p}^*$ . . . . .	207
4. Choice of proportions and rate of growth . . . . .	208
4.1. The physical rate of net surplus . . . . .	208
4.2. Restriction on choice imposed by the rate of growth . . . . .	209
4.3. Numerical example . . . . .	210
4.4. Concluding remarks . . . . .	211
5. The von Neumann model . . . . .	212
5.1. A multiplicity of techniques . . . . .	212
5.2. The technique which maximizes the rate of growth . . . . .	212
5.3. Relations with the standard system and with Sraffa's prices . . . . .	214

5.4. A restriction similar to that of the Sraffa system . . . 215

6. A relationship between the rate of growth and the rate of profit . . . . . 216

6.1. A capitalists' propensity to save smaller than unity . 216

6.2. The "Cambridge equation" . . . . . 217

6.3. Extension to the case of a positive workers' propensity to save . . . . . 218

6.4. Determinants of the composition of consumption . 218

7. The efficiency criterion in the process of capital accumulation . . . . . 219

7.1. The rate of growth of labor as an exogenously given datum . . . . . 219

7.2. The technological frontier of the consumption-and-growth possibilities . . . . . 219

7.3. Properties of the technological frontier . . . . . 221

7.4. The criterion of efficiency . . . . . 222

7.5. The efficiency criterion and the profitability criterion . . . . . 222

7.6. The "golden rule" of capital accumulation . . . . . 223

**Mathematical Appendix. An Elementary Introduction to Matrix Algebra . . . . . 226**

1. Introductory remarks . . . . . 226

2. Definitions . . . . . 226

3. Vectors . . . . . 228

4. Matrices . . . . . 235

5. Partitioning of matrices . . . . . 240

6. Determinants . . . . . 243

7. The rank of a matrix . . . . . 249

8. Systems of linear equations . . . . . 251

9. Eigenvalues and eigenvectors . . . . . 257

10. Non-negative matrices . . . . . 266

11. The Perron-Frobenius theorems . . . . . 267
