Preface to the Fourth Edition	xi
Preface to the Third Edition	xiii
Preface to the Second Edition.....	xv
Preface to the First Edition.....	xvii
Authors	xix
1 Randomization.....	1
1.1 The Idea of a Randomization Test	1
1.2 Aspects of Randomization Testing Raised by the Example	7
1.3 Confidence Limits by Randomization	10
1.4 Randomization and Observational Studies	12
2 The Bootstrap	15
2.1 Resampling with Replacement	15
2.2 Standard Bootstrap Confidence Limits.....	15
2.2.1 The Standard Bootstrap Confidence Interval	16
2.3 Simple Percentile Confidence Limits.....	19
2.4 Bias-Corrected Percentile Confidence Limits	25
2.5 Accelerated Bias-Corrected Percentile Limits.....	29
2.6 Other Methods for Constructing Confidence Intervals	36
2.7 Transformations to Improve Bootstrap-t Intervals	40
2.8 Parametric Confidence Intervals	41
2.9 A Better Estimate of Bias.....	41
2.10 Bootstrap Tests of Significance.....	42
2.11 Balanced Bootstrap Sampling.....	44
2.12 Bootstrapping with Models for Count Data.....	45
3 Monte Carlo Methods	47
3.1 Monte Carlo Tests.....	47
3.2 Generalized Monte Carlo Tests.....	49
3.3 Implicit Statistical Models.....	53
4 Some General Considerations.....	55
4.1 Questions about Computer-Intensive Methods	55
4.2 Power	55
4.3 Number of Random Sets of Data Needed for a Test	56
4.4 Determining a Randomization Distribution Exactly	60
4.5 The Number of Replications for Confidence Intervals.....	62
4.6 More Efficient Bootstrap Sampling Methods.....	64
4.7 The Generation of Pseudo-Random Numbers.....	64
4.8 The Generation of Random Permutations.....	65

5 One- and Two-Sample Tests	67
5.1 The Paired Comparisons Design	67
5.2 The One-Sample Randomization Test	71
5.3 The Two-Sample Randomization Test	72
5.4 Bootstrap Tests	75
5.5 Randomizing Residuals	76
5.6 Comparing the Variation in Two Samples	78
5.7 A Simulation Study	80
5.8 Comparison of Two Samples on Multiple Measurements	83
6 Analysis of Variance	89
6.1 One-Factor Analysis of Variance	89
6.2 Tests for Constant Variance	91
6.3 Testing for Mean Differences Using Residuals	92
6.4 Examples of More Complicated Types of Analysis of Variance	96
6.5 Procedures for Handling Unequal Variances	113
6.6 Other Aspects of Analysis of Variance	114
Exercises	115
7 Regression Analysis	119
7.1 Simple Linear Regression	119
7.2 Randomizing Residuals	121
7.3 Testing for a Non-Zero β Value	124
7.4 Confidence Limits for β	124
7.5 Multiple Linear Regression	125
7.6 Alternative Randomization Methods with Multiple Regression	128
7.7 Bootstrapping with Regression	143
7.8 Further Reading	143
Exercises	145
8 Distance Matrices and Spatial Data	147
8.1 Testing for Association between Distance Matrices	147
8.2 The Mantel Test	148
8.3 Sampling the Randomization Distribution	150
8.4 Confidence Limits for Regression Coefficients	152
8.5 The Multiple Mantel Test	154
8.6 Other Approaches with More Than Two Matrices	155
8.7 Further Reading	171
Exercises	173
9 Other Analyses on Spatial Data	179
9.1 Spatial Data Analysis	179
9.2 The Study of Spatial Point Patterns	179

9.3	Mead's Randomization Test.....	180
9.4	Tests for Randomness Based on Distances	184
9.5	Testing for an Association between Two Point Patterns	186
9.6	The Besag-Diggle Test.....	187
9.7	Tests Using Distances between Points	189
9.8	Testing for Random Marking	191
9.9	Further Reading	193
	Exercises	196
10	Time Series.....	197
10.1	Randomization and Time Series.....	197
10.2	Randomization Tests for Serial Correlation	198
10.3	Randomization Tests for Trend.....	203
10.4	Randomization Tests for Periodicity	208
10.5	Irregularly Spaced Series	215
10.6	Tests on Times of Occurrence.....	217
10.7	Discussion on Procedures for Irregular Series	219
10.8	Bootstrap Methods.....	223
10.9	Monte Carlo Methods.....	223
10.10	Model-Based versus Moving Block Resampling	225
10.11	Further Reading	227
11	Survival and Growth Data	229
11.1	Bootstrapping Survival Data.....	229
11.2	Bootstrapping for Variable Selection.....	231
11.3	Bootstrapping for Model Selection.....	233
11.4	Group Comparisons	234
11.5	Growth Data	234
11.6	Further Reading	239
	Exercises	242
12	Non-Standard Situations	243
12.1	The Construction of Tests in Non-Standard Situations.....	243
12.2	Species Co-Occurrences on Islands.....	243
12.3	Alternative Switching Algorithms	253
12.4	Examining Time Changes in Niche Overlap	255
12.5	Probing Multivariate Data with Random Skewers	262
12.6	Ant Species Sizes in Europe	266
13	Bayesian Methods	271
13.1	The Bayesian Approach to Data Analysis	271
13.2	The Gibbs Sampler and Related Methods	272
13.3	Biological Applications.....	276
13.4	Further Reading	277

14 Conclusion and Final Comments	279
14.1 Randomization	279
14.2 Bootstrapping	279
14.3 Monte Carlo Methods in General	280
14.4 Classical versus Bayesian Inference	281
Appendix: Software for Computer-Intensive Statistics	283
References	299
Index	331
