Foreword xv

Preface xix
- Audience xix
- Organization xx
- Features xxii
- Obtaining the Example Programs xxiii
- Acknowledgments xxiv
- How to Contact Us xxvi

1 Introduction to Neuro-Fuzzy and Soft Computing 1
- 1.1 Introduction 1
- 1.2 Soft Computing Constituents and Conventional Artificial Intelligence 1
  - 1.2.1 From Conventional AI to Computational Intelligence 3
  - 1.2.2 Neural Networks 6
  - 1.2.3 Fuzzy Set Theory 6
  - 1.2.4 Evolutionary Computation 7
- 1.3 Neuro-Fuzzy and Soft Computing Characteristics 7

I Fuzzy Set Theory 11

2 Fuzzy Sets 13
- 2.1 Introduction 13
- 2.2 Basic Definitions and Terminology 14
- 2.3 Set-theoretic Operations 21
- 2.4 MF Formulation and Parameterization 24

2.4.1 MFs of One Dimension 24
2.4.2 MFs of Two Dimensions 30
2.4.3 Derivatives of Parameterized MFs 34
2.5 More on Fuzzy Union, Intersection, and Complement* 35
2.5.1 Fuzzy Complement* 35
2.5.2 Fuzzy Intersection and Union* 36
2.5.3 Parameterized T-norm and T-conorm* 40
2.6 Summary 42
Exercises 42

3 Fuzzy Rules and Fuzzy Reasoning 47
3.1 Introduction 47
3.2 Extension Principle and Fuzzy Relations 47
3.2.1 Extension Principle 47
3.2.2 Fuzzy Relations 50
3.3 Fuzzy If-Then Rules 54
3.3.1 Linguistic Variables 54
3.3.2 Fuzzy If-Then Rules 59
3.4 Fuzzy Reasoning 62
3.4.1 Compositional Rule of Inference 63
3.4.2 Fuzzy Reasoning 64
3.5 Summary 70
Exercises 70

4 Fuzzy Inference Systems 73
4.1 Introduction 73
4.2 Mamdani Fuzzy Models 74
4.2.1 Other Variants 79
4.3 Sugeno Fuzzy Models 81
4.4 Tsukamoto Fuzzy Models 84
4.5 Other Considerations 85
4.5.1 Input Space Partitioning 86
4.5.2 Fuzzy Modeling 87
4.6 Summary 89
Exercises 90

II Regression and Optimization **93**

5 Least-Squares Methods for System Identification **95**
5.1 System Identification: An Introduction 95
5.2 Basics of Matrix Manipulation and Calculus 97
5.3 Least-Squares Estimator 104
5.4 Geometric Interpretation of LSE 110
5.5 Recursive Least-Squares Estimator 113
5.6 Recursive LSE for Time-Varying Systems* 116
5.7 Statistical Properties and the Maximum Likelihood Estimator* 118
5.8 LSE for Nonlinear Models 122
5.9 Summary 125
Exercises 126

6 Derivative-based Optimization **129**
6.1 Introduction 129
6.2 Descent Methods 129
6.2.1 Gradient-based Methods 130
6.3 The Method of Steepest Descent 133
6.4 Newton's Methods 134
6.4.1 Classical Newton's Method 134
6.4.2 Modified Newton's Methods* 136
6.4.3 Quasi-Newton Methods* 139
6.5 Step Size Determination 141
6.5.1 Initial Bracketing 141
6.5.2 Line Searches 142
6.5.3 Termination Rules* 146
6.6 Conjugate Gradient Methods* 148
6.6.1 Conjugate Directions* 148
6.6.2 From Orthogonality to Conjugacy* 149
6.6.3 Conjugate Gradient Algorithms* 152
6.7 Analysis of Quadratic Case 154
6.7.1 Descent Methods with Line Minimization 156
6.7.2 Steepest Descent Method without Line Minimization 156
6.8 Nonlinear Least-squares Problems 160
6.8.1 Gauss-Newton Method 161
6.8.2 Levenberg-Marquardt Concepts 163
6.9 Incorporation of Stochastic Mechanisms 166

6.10 Summary 168
Exercises 168

7 Derivative-Free Optimization 173
7.1 Introduction 173
7.2 Genetic Algorithms 175
7.3 Simulated Annealing 181
7.4 Random Search 186
7.5 Downhill Simplex Search 189
7.6 Summary 193
Exercises 194

III Neural Networks 197

8 Adaptive Networks 199
8.1 Introduction 199
8.2 Architecture 200
8.3 Backpropagation for Feedforward Networks 205
8.4 Extended Backpropagation for Recurrent Networks 210
8.4.1 Synchronously Operated Networks: BPTT and RTRL 212
8.4.2 Continuously Operated Networks: Mason's Gain Formula* 215
8.5 Hybrid Learning Rule: Combining Steepest Descent and LSE 219
8.5.1 Off-Line Learning (Batch Learning) 220
8.5.2 On-Line Learning (Pattern-By-Pattern Learning) 222
8.5.3 Different Ways of Combining Steepest Descent and LSE 222
8.6 Summary 223
Exercises 223

9 Supervised Learning Neural Networks 226
9.1 Introduction 226
9.2 Perceptrons 227
9.2.1 Architecture and Learning Rule 227
9.2.2 Exclusive-OR Problem 229
9.3 Adaline 230
9.4 Backpropagation Multilayer Perceptrons 233
9.4.1 Backpropagation Learning Rule 234
9.4.2 Methods of Speeding Up MLP Training 236

9.4.3 MLP's Approximation Power 238
9.5 Radial Basis Function Networks 238
9.5.1 Architectures and Learning Methods 238
9.5.2 Functional Equivalence to FIS 241
9.5.3 Interpolation and Approximation RBFNs 242
9.5.4 Examples 244
9.6 Modular Networks 246
9.7 Summary 250
Exercises 251

10 Learning from Reinforcement 258
10.1 Introduction 258
10.2 Failure Is the Surest Path to Success 259
10.2.1 Jackpot Journey 259
10.2.2 Credit Assignment Problem 262
10.2.3 Evaluation Functions 263
10.3 Temporal Difference Learning 264
10.3.1 TD Formulation 265
10.3.2 Expected Jackpot 266
10.3.3 Predicting Cumulative Outcomes 268
10.4 The Art of Dynamic Programming 270
10.4.1 Formulation of Classical Dynamic Programming 270
10.4.2 Incremental Dynamic Programming 272
10.5 Adaptive Heuristic Critic 273
10.5.1 Neuron-like Critic 273
10.5.2 An Adaptive Neural Critic Algorithm 274
10.5.3 Exploration and Action Selection 277
10.6 Q-learning 278
10.6.1 Basic Concept 278
10.6.2 Implementation 279
10.7 A Cost Path Problem 281
10.7.1 Expected Cost Path Problem by TD methods 282
10.7.2 Finding an Optimal Path in a Deterministic Minimum Cost Path Problem 283
10.7.3 State Representations for Generalization 287
10.8 World Modeling* 288
10.8.1 Model-free and Model-based Learning* 288
10.8.2 Distal Teacher* 289

10.8.3 Learning Speed* 289
10.9 Other Network Configurations* 290
10.9.1 Divide-and-Conquer Methodology* 290
10.9.2 Recurrent Networks* 291
10.10 Reinforcement Learning by Evolutionary Computation* 292
10.10.1 Bucket Brigade* 292
10.10.2 Genetic Reinforcers* 292
10.10.3 Immune Modeling* 293
10.11 Summary 293
Exercises 294

11 Unsupervised Learning and Other Neural Networks 301
11.1 Introduction 301
11.2 Competitive Learning Networks 302
11.3 Kohonen Self-Organizing Networks 305
11.4 Learning Vector Quantization 308
11.5 Hebbian Learning 310
11.6 Principal Component Networks 312
11.6.1 Principal Component Analysis 312
11.6.2 Oja's Modified Hebbian Rule 316
11.7 The Hopfield Network 316
11.7.1 Content-Addressable Nature 317
11.7.2 Binary Hopfield Networks 318
11.7.3 Continuous-Valued Hopfield Networks 321
11.7.4 Traveling Salesperson Problem 324
11.7.5 The Boltzmann Machine 326
11.8 Summary 327
Exercises 328

IV Neuro-Fuzzy Modeling 333

12 ANFIS: Adaptive Neuro-Fuzzy Inference Systems 335
12.1 Introduction 335
12.2 ANFIS Architecture 336
12.3 Hybrid Learning Algorithm 340
12.4 Learning Methods that Cross-fertilize ANFIS and RBFN 341
12.5 ANFIS as a Universal Approximator* 342

12.6 Simulation Examples 345
12.6.1 Practical Considerations 345
12.6.2 Example 1: Modeling a Two-Input Sinc Function 346
12.6.3 Example 2: Modeling a Three-Input Nonlinear Function . 348
12.6.4 Example 3: On-line Identification in Control Systems 351
12.6.5 Example 4: Predicting Chaotic Time Series 353
12.7 Extensions and Advanced Topics 360
Exercises 363

13 Coactive Neuro-Fuzzy Modeling: Towards Generalized ANFIS 369
13.1 Introduction 369
13.2 Framework 370
13.2.1 Toward Multiple Inputs/Outputs Systems 370
13.2.2 Architectural Comparisons 370
13.3 Neuron Functions for Adaptive Networks 372
13.3.1 Fuzzy Membership Functions versus Receptive Field Units 373
13.3.2 Nonlinear Rule 376
13.3.3 Modified Sigmoidal and Truncation Filter Functions 380
13.4 Neuro-Fuzzy Spectrum 382
13.5 Analysis of Adaptive Learning Capability 385
13.5.1 Convergence Based on the Steepest Descent Method Alone 385
13.5.2 Interpretability Spectrum 386
13.5.3 Evolution of Antecedents (MFs) 387
13.5.4 Evolution of Consequents (Rules) 389
13.5.5 Evolving Partitions 390
13.6 Summary 393
Exercises 395

V Advanced Neuro-Fuzzy Modeling 401

14 Classification and Regression Trees 403
14.1 Introduction 403
14.2 Decision Trees 404
14.3 CART Algorithm for Tree Induction 406
14.3.1 Tree Growing 407
14.3.2 Tree Pruning 413
14.4 Using CART for Structure Identification in ANFIS 416

14.5 Summary 421
Exercises 421

15 Data Clustering Algorithms 423
15.1 Introduction 423
15.2 K-Means Clustering 424
15.3 Fuzzy C-Means Clustering 425
15.4 Mountain Clustering Method 427
15.5 Subtractive Clustering 431
15.6 Summary 432
Exercises 432

16 Rulebase Structure Identification 434
16.1 Introduction 434
16.2 Input Selection 435
16.3 Input Space Partitioning 436
16.4 Rulebase Organization 441
16.5 Focus Set–Based Rule Combination 446
16.6 Summary 447
Exercises 448

VI Neuro-Fuzzy Control 451

17 Neuro-Fuzzy Control I 453
17.1 Introduction 453
17.2 Feedback Control Systems and Neuro-Fuzzy Control: An Overview 454
17.2.1 Feedback Control Systems 454
17.2.2 Neuro-Fuzzy Control 458
17.3 Expert Control: Mimicking An Expert 458
17.4 Inverse Learning 460
17.4.1 Fundamentals 460
17.4.2 Case Studies 463
17.5 Specialized Learning 465
17.6 Backpropagation Through Time and Real-Time Recurrent Learning 469
17.6.1 Fundamentals 469
17.6.2 Case Studies: the Inverted Pendulum System 470
17.7 Summary 476

Exercises 477

18 Neuro-Fuzzy Control II 480
18.1 Introduction 480
18.2 Reinforcement Learning Control 480
18.2.1 Control Environment 480
18.2.2 Neuro-Fuzzy Reinforcement Controllers 481
18.3 Gradient-Free Optimization 483
18.3.1 GAs: Coding and Genetic Operators 484
18.3.2 GAs: Formulating Objective Functions 488
18.4 Gain Scheduling 489
18.4.1 Fundamentals 489
18.4.2 Case Studies 491
18.5 Feedback Linearization and Sliding Control 493
18.6 Summary 496
Exercises 497

VII Advanced Applications 501

19 ANFIS Applications 503
19.1 Introduction 503
19.2 Printed Character Recognition 503
19.3 Inverse Kinematics Problems 507
19.4 Automobile MPG Prediction 510
19.5 Nonlinear System Identification 514
19.6 Channel Equalization 516
19.7 Adaptive Noise Cancellation 523

20 Fuzzy-Filtered Neural Networks 535
20.1 Introduction 535
20.2 Fuzzy-Filtered Neural Networks 536
20.3 Application 1: Plasma Spectrum Analysis 538
20.3.1 Multilayer Perceptron Approach 538
20.3.2 Fuzzy-Filtered Neural Network Approach 539
20.4 Application 2: Hand-Written Numeral Recognition 540
20.4.1 One Dimensional Fuzzy Filters 541
20.4.2 Two Dimensional Fuzzy Filters 542

20.5 Genetic Algorithm–based Fuzzy Filters 543
20.5.1 A General Model 543
20.5.2 Variations and Discussion 545
20.6 Summary 549

21 Fuzzy Sets and Genetic Algorithms in Game Playing 551
21.1 Introduction 551
21.2 Variants of Genetic Algorithms 551
21.3 Using Genetic Algorithms in Game Playing 553
21.4 Simulation Results of the Basic Model 556
21.5 Using Fuzzily Characterized Features 559
21.6 Using Polyploid GA in Game Playing 560
21.7 Summary 564

22 Soft Computing for Color Recipe Prediction 568
22.1 Introduction 568
22.2 Color Recipe Prediction 569
22.3 Single MLP approaches 569
22.4 CANFIS modeling for Color Recipe Prediction 571
22.4.1 Fuzzy Partitionings 572
22.4.2 CANFIS Architectures 573
22.4.3 Knowledge-embedded structures 576
22.4.4 CANFIS Simulation 576
22.5 Color Paint Manufacturing Intelligence 577
22.5.1 Manufacturing Intelligence Architecture 579
22.5.2 Knowledge Base 580
22.5.3 Multi-elites Generator 581
22.5.4 Fuzzy Population Generator 581
22.5.5 Fitness Function 582
22.5.6 Genetic Strategies 584
22.6 Experimental Evaluation 587
22.7 Discussion 589
22.8 Concluding Remarks and Future Directions 591

A Hints to Selected Exercises 595

B List of Internet Resources 598

C List of MATLAB Programs 601

D List of Acronyms 604
