

TABLE OF CONTENTS

ABBREVIATIONS

1	INTRODUCTION	1
1.1	PARKINSON'S DISEASE	1
1.1.1	Epidemiology	1
1.1.2	Clinical manifestation	1
1.1.3	Etiology	3
1.1.4	Neuropathological hallmarks	5
1.1.5	Basal ganglia pathophysiology	6
1.1.6	Therapeutic approaches	7
1.2	AUTOPHAGY	8
1.3	MEMBRANE CONTACT SITES	9
1.3.1	Function of Membrane Contact Sites	9
1.3.2	Microtubules and Rab7	10
1.3.3	Contact site proteins	11
1.3.4	Cholesterol	15
2	AIMS AND OBJECTIVES	19
3	MATERIALS AND METHODS	20
3.1	Materials	20
3.2	Cell culture and transfection	20
3.3	Immunofluorescence	21
3.4	Cholesterol depletion and enrichment	21
3.5	Particle counting and analysis	22
3.6	Time-lapse microscopy	22
3.7	Statistical analysis	23
4	RESULTS	24
4.1	Effects of endogenous and exogenous cholesterol on viability and aggregate clearance	24
4.1.1	Impaired endogenous cholesterol synthesis does not impair Rab7 functioning	24
4.1.2	Exogenous cholesterol supply is prevented by the use of serum free medium	25
4.1.3	Rab7 functioning is required for cell viability	25
4.1.4	Cholesterol addition promotes aggregate clearance	27
4.1.5	Low ER cholesterol promotes FYCO1-mediated transport	31
4.2	Effect of sterol depletion on particle transport	33
4.2.1	Simvastatin inhibits mobility of autophagic vesicles	33
4.2.2	Simvastatin inhibits mobility of alpha-synuclein particles	34
4.2.3	Cholesterol depletion inhibits maturation, not fusion	36
4.3	Role of contact sites in fusion and maturation	37
4.3.1	Contact sites are required for fusion	37
4.3.2	VAP-A deficiency does not impair Rab7 function	38
4.3.3	Rab7 functioning is linked to VAP-A	39
4.4	Role of specific contact site adaptors for aggregate clearance and vesicle movement	40
4.4.1	ORP1L in transport and synuclein clearance	40
4.4.2	The role of ORP5 in transport and synuclein clearance	48
4.4.3	Influence of NPC1 on ER-endosome contact sites	54
4.4.4	Role of STARD3-mediated ER to endosome cholesterol transport on aggregate clearance	55
5	DISCUSSION	57
5.1	Low ER cholesterol immobilizes particles	57
5.2	Cholesterol gradients determine the direction of endosome transport	58

5.3	Blocking endogenous cholesterol synthesis reverses the direction of transport	59
5.4	Autophagosomes are not influenced by cholesterol gradients.....	62
5.5	Cholesterol affects lysosomal acidification and fusion via Rab7	63
5.6	ORP5 influences transport via multiple pathways	63
5.7	Rab7 induces transport of LNAVs to the cell center	64
5.8	Cholesterol overload prevents clearance	64
5.9	Cholesterol and alpha-synuclein aggregation	66
5.10	Conclusion	66
5.11	Outlook	67
6	ABSTRACT	68
7	REFERENCES	70
	ACKNOWLEDGEMENTS	80
	DECLARATION	81
	CURRICULUM VITAE	83
