1. Toward scalable III-nitride quantum dot structures for quantum photonics	1
Pei-Cheng Ku, Tuba Sarwar, Brandon Demory, and Chu-Hsiang Teng	
1. Introduction	1
2. Site-controlled quantum dot heterostructures	5
3. Tailoring exciton–photon interactions	17
4. Conclusion	21
References	23
2. Microcavity exciton polaritons	29
Long Zhang, Jiaqi Hu, and Hui Deng	
1. Introduction	29
2. Exciton polaritons in semiconductor microcavity	30
3. Control of polariton modes	46
4. Exciton polaritons in new materials	59
5. Summary	73
References	74
Further reading	87
3. Ultrastrong light–matter coupling in semiconductors	89
Nicolas Marquez Peraca, Andrey Baydin, Weilu Gao, Motoaki Bamba, and Junichiro Kono	
1. Introduction	89
2. Theory of ultrastrong light–matter coupling	96
3. Experimental demonstrations of ultrastrong coupling	113
4. Summary and outlook	136
Acknowledgments	137
References	137
4. Quantum integrated photonic circuits	153
Samir Bounouar, Marcelo Davanco, and Stephan Reitzenstein	
1. Introduction	154
2. Numeric modeling and optimization	156

3. Fabrication technologies	164
4. Homogenous waveguide systems	180
5. Heterogeneous waveguide systems	195
6. Outlook	215
7. Conclusion	219
References	220
5. Quantum optics with quantum dot ensembles	235
Marc Aßmann and Manfred Bayer	
1. Introduction	235
2. Enhancement of quantum dot spontaneous emission: Purcell effect	236
3. Superradiance	239
4. Superradiance from quantum dot lasers	241
5. Photon statistics excitation spectroscopy	251
6. Quantum-optical spectroscopy	258
7. Summary	263
Acknowledgments	264
References	264
6. Valley excitons: From monolayer semiconductors to moiré superlattices	269
Hongyi Yu, Xiaodong Xu, and Wang Yao	
1. Introduction	269
2. Valley excitons in monolayers	272
3. Valley excitons in moiré superlattices	281
References	298
7. Quantum light from optically dressed quantum dot states in microcavities	305
Glenn S. Solomon, Andreas Muller, and Edward Flagg	
1. Introduction	305
2. Controlling the emission properties using optical dressing	311
3. Creating entangled photon states with optical dressing of the biexciton–exciton cascade	317
4. Creating indistinguishable photons from the emission from quantum dots in separate samples	326
5. An optical spin read-out method for a quantum dot using the AC Stark effect	333
Acknowledgments	342
References	342

8. Coherent control of a semiconductor quantum dot ensemble	347
Takeshi Suzuki and Rohan Singh	
1. Introduction	347
2. Optical Bloch equations and coherent control	349
3. Two-dimensional coherent spectroscopy	357
4. Coherent control of a semiconductor QD ensemble	370
5. Summary and outlook	380
References	381
 9. Single-photon nonlinear optics with a semiconductor quantum dot	 387
Shuo Sun and Kai Müller	
1. Introduction	387
2. Quantum dot as a two-level system: Photon blockade and photon-induced tunneling	389
3. Quantum dot as a three-level system: A single-photon switch and transistor	398
4. Summary and outlook	411
References	412
 10. Quantum-light shaping and quantum spectroscopy in semiconductors	 417
Mackillo Kira, Georgios Roumpos, and Steven T. Cundiff	
1. Introduction to quantum spectroscopy	418
2. Theoretical background for quantum-light shaping (QLS)	424
3. Theory of the quantum-light shaping	430
4. Quantum-light shaping algorithm	435
5. All-experimental quantum-light shaping	441
6. Discussion and outlook	449
Appendix	451
References	456
