List of Figures *page* x
Preface xv

1 Introduction and Overview 1
1.1 Brain Enthusiasm: The Relevance of Distinguishing Fact from Fiction 2
1.2 The Basis of Neural Signals 4
1.2.1 Information Transfer in Neurons 7
1.2.2 Signal Processing 10
1.2.3 Other Signals in the Brain: Molecular and Hemodynamic Signals 13
1.2.4 Maps in the Brain: From the Activity of Single Neurons to Signals without Single-Neuron Resolution 15
1.3 A Short Overview of Methods in Human Neuroscience 18
1.3.1 Techniques to Measure Brain Structure 19
1.3.2 Techniques to Measure Hemodynamic Correlates of Neural Activity 20
1.3.3 Techniques to Measure Electrophysiological Activity 22

Part I Structural Neuroimaging 29

2 The Physics behind Magnetic Resonance Imaging (MRI) 31
2.1 The Effect of Magnetic Fields on the Human Body 32
2.2 From Resonance to Imaging 35
2.3 How Do These Physical Principles Give Rise to an Image with Anatomical Structure? 40
2.4 The Hardware of a Scanner 42
2.5 Parameters That Are Chosen by the User 45

3 Structural Imaging Methods 48
3.1 Structural T1-Weighted MRI 49
3.1.1 Quality Check 49
3.1.2 Finding Structure in Anatomical Images and Normalization 50
3.1.3 Approaches to Investigate Brain Morphometry 56
3.1.4 Statistical Analysis and Interpretation 57
3.1.5 Voxel-Based Lesion-Symptom Mapping 58
3.1.6 The Relevance of Brain Structure for Behavior and Mind 58
3.2 Diffusion Tensor Imaging (DTI) 61
3.2.1 Data Acquisition 62
3.2.2 Data Analysis 64

3.2.3 The Relevance of Anatomical Connectivity for Behavior and Mind 67
3.3 Magnetic Resonance Spectroscopy (MRS) 68
3.3.1 Data Acquisition 69
3.3.2 Data Analysis 72
3.3.3 The Relevance of Molecular Indices for Behavior and Mind 73

Part II Hemodynamic Neuroimaging 77

4 Hemodynamic Imaging Methods 79
4.1 Hemodynamics and Its Relationship to Neural Activity 81
4.1.1 The Hemodynamic Response Function 81
4.1.2 The Relationship between the HRF and Different Aspects of Neural Activity 84
4.2 Functional Magnetic Resonance Imaging (fMRI) 88
4.2.1 Blood-Oxygenation-Level Dependent fMRI 89
4.2.2 Arterial Spin Labeling fMRI 91
4.2.3 The Relevance of fMRI for Behavior 92
4.3 Positron Emission Tomography (PET) 92
4.3.1 The Physics of PET 93
4.3.2 Using PET for Measuring Neural Activity 94
4.3.3 Unique Contributions of PET 95
4.4 Functional Near-Infrared Spectroscopy (fNIRS) 96
4.5 A Comparison of Research with fMRI, PET, and fNIRS 98

5 Designing a Hemodynamic Imaging Experiment 102
5.1 Think Before You Start an Experiment 103
5.2 Which Conditions to Include: The Subtraction Method 104
5.2.1 The Subtraction Method 104
5.2.2 Considerations about the Subtraction Method 106
5.3 How to Present the Conditions: The Block Design 108
5.3.1 The Block Design and the Hemodynamic Response Function 108
5.3.2 The Block Design in Practice in fMRI and fNIRS 111
5.3.3 A Few Examples of Classical Studies Using a Block Design 113
5.4 The Event-Related Design 115
5.5 The Baseline or Rest Condition 118
5.5.1 The Role of a Baseline in Task-Based fMRI 118
5.5.2 Regions Activated during a Resting Baseline 120
5.6 Task and Stimuli in the Scanner 122

6 Image Processing 127
6.1 Software Packages 127
6.2 Properties of the Images 130

6.3 Preprocessing Step 1: Slice Timing 131
6.4 Preprocessing Step 2: Motion Correction 132
6.5 Preprocessing Step 3: Coregistration 135
6.6 Preprocessing Step 4: Normalization 137
6.7 Preprocessing Step 5: Spatial Smoothing 137

7 Basic Statistical Analyses 142
7.1 Statistical Analyses: The General Linear Model 142
7.1.1 Simple Linear Regression 142
7.1.2 Multiple Linear Regression 143
7.1.3 The General Linear Model Applied to fMRI Data 144
7.1.4 Data Cleaning prior to Applying the GLM 145
7.1.5 The Efficiency of a Design and Correlation between Predictors 146
7.2 Determining Significance and Interpreting It 148
7.2.1 Calculating a Simple Test Statistic: A *t*-Contrast 148
7.2.2 Correction for Multiple Comparisons, or How to Avoid Brain Activity in Dead Salmon 151
7.2.3 Combining Data across Participants: Second-Level Whole-Brain Analyses 154
7.2.4 Region-of-Interest Analyses 155
7.2.5 Another Statistical Caveat: Double Dipping and Circular Analyses 157
7.2.6 Statistical Inference 159

8 Advanced Statistical Analyses 163
8.1 Functional Connectivity: Designs and Analyses 163
8.1.1 Correlations in Brain Activity 164
8.1.2 The Interpretation of Correlations in Brain Activity 165
8.1.3 Modeling Directional Functional Connectivity 168
8.1.4 Task-Related Modulations of Connectivity 171
8.1.5 Resting-State fMRI (RS fMRI) 173
8.2 Multi-voxel Pattern Analyses 176
8.2.1 A Schematic Tutorial of MVPA 176
8.2.2 A Specific Example of MVPA 178
8.2.3 The Potential of MVPA to Move beyond Neophrenology 181
8.2.4 What Do We Measure with MVPA? 183
8.3 Functional MRI Adaptation 188

Part III Electrophysiological Neuroimaging 191

9 Electromagnetic Field of the Brain 193
9.1 Electrophysiological Activity of the Brain 194
9.1.1 From Neurons to Electric Field 194

9.1.2 Magnetic Field of the Neural Activity 197
9.1.3 From the Field to Sensors 198
9.2 Electromagnetic Field Signals 198
9.2.1 Properties of the Field Signal 200
9.2.2 Dimensions and Resolution of the Field Signal 204
9.3 Brain Dynamics vs. Mind Dynamics 206

10 Electroencephalography and Magnetoencephalography 209
10.1 Electroencephalography (EEG) 210
10.1.1 EEG Electrodes 211
10.1.2 EEG Amplifier 218
10.1.3 Procedure for Data Acquisition 219
10.2 Magnetoencephalography (MEG) 221
10.2.1 MEG Sensors 222
10.2.2 Magnetically Shielded Room 226
10.2.3 Procedure for MEG Data Acquisition 227
10.3 Comparison between EEG and MEG 228

11 Basic Analysis of Electrophysiological Signals 231
11.1 Preprocessing 232
11.1.1 Noise 232
11.1.2 Montage 235
11.1.3 Segmentation and Visual Inspection 236
11.1.4 Independent Component Analysis for Preprocessing 236
11.1.5 Filtering for Preprocessing 238
11.1.6 Resampling 240
11.2 Main Signal Processing 241
11.2.1 Spectral Analysis 241
11.2.2 Event-Related Potential Analysis 246
11.3 Statistical Tests 249

12 Advanced Data Analysis 252
12.1 Short Time Fourier Transform and Wavelet Transform 252
12.1.1 Short Time Fourier Transform 252
12.1.2 Wavelet Transform 255
12.1.3 STFT or Wavelet? 258
12.2 Phase Analysis 259
12.2.1 Computation of the Phase 259
12.2.2 Phase Synchrony 260
12.2.3 Network Analysis 262
12.2.4 Inter-trial Phase Coherence 265
12.2.5 Trial Averaging Revisited 267
12.3 Autoregression and Granger Causality 269

12.3.1 Autoregression 269
12.3.2 Granger Causality 271

Part IV Complementary Methods 275

13 Multi-modal Imaging 277
13.1 The Spatial and Temporal Unfolding of Visual Category Representations 278
13.2 Simultaneous Application of EEG and fMRI 281
13.3 M/EEG Source Localization 284
13.4 Differentiating between Representational and Access Theories of Disorders 286
13.5 Clinical Diagnostics with Multi-modal Imaging 289

14 Causal Methods to Modulate Brain Activity 292
14.1 Microstimulation and Deep Brain Stimulation 293
14.2 Focused Ultrasound Stimulation (FUS) 297
14.3 Transcranial Magnetic Stimulation (TMS) 298
14.4 Transcranial Current Stimulation (TCS) 303

Glossary 309
