Preface	vii		
Geological map symbols	ix		
<b>1. Geological maps</b>	<b>1</b>	<b>3. Folding</b>	<b>33</b>
1.1 What are geological maps?	1	3.1 Cylindrical and noncylindrical folding	33
1.2 How is such a geological map made?	1	3.2 Basic geometrical features of a fold	33
1.3 What is the completed geological map used for?	2	3.3 Terms relating to the orientation of folds	33
<b>2. Uniformly dipping beds</b>	<b>3</b>	3.4 The tightness of folding	38
2.1 Introduction	3	3.5 Curvature variation around the fold	38
2.2 Dip	3	3.6 Symmetrical and asymmetrical folds	39
2.3 Plunge of lines	4	3.7 Types of noncylindrical fold	40
2.4 Strike lines	5	3.8 Layer thickness variation around folds	40
2.5 Apparent dip	6	3.9 Structure contours and folds	41
2.6 Outcrop patterns of uniformly dipping beds	6	Classroom exercise	42
2.7 Representing surfaces on maps	7	3.10 Determining the plunge of a fold from structure contours	42
2.8 Properties of contour maps	8	3.11 Lines of intersection of two surfaces	44
2.9 Drawing vertical cross sections through topographical and geological surfaces	9	3.12 Determining the plunge of a fold from the dips of fold limbs	44
Worked example	11	Worked example	44
2.10 Three-point problems	12	3.13 Sections through folded surfaces	45
Worked example	12	Classroom experiment	45
2.11 Outcrop patterns of geological surfaces exposed on the ground	13	3.14 The profile of a fold	46
Worked example	13	3.15 Horizontal sections through folds	46
2.12 Buried and eroded parts of a geological surface	14	Worked example	46
Worked example	14	3.16 Construction of true fold profiles	47
2.13 Contours of burial depth (isobaths)	14	3.17 Recognition of folds on maps	48
Worked example	15	Worked example	48
2.14 V-shaped outcrop patterns	15	3.18 Hinge points and axial surface traces	48
Worked example	16	Worked example	49
2.15 Structure contours from outcrop patterns	16	3.19 Constructing hinge lines on maps	49
Worked example	16	3.20 Determining the nature of folds on maps	49
2.16 Geological surfaces and layers	16	3.21 Cross-sections through folded areas	50
2.17 Stratigraphic thickness	17	Worked example	51
Worked example	19	3.22 Noncylindrical folds and structure contours	51
2.18 Isochores and isopachs	19	3.23 Inliers and outliers	51
2.19 Topographic effects and map scale	20	<b>4. Faulting</b>	<b>67</b>
		4.1 Fault planes	68
		Worked example	68
		4.2 Slip and separation	68
		4.3 Separation terms	70
		Worked example	72
		4.4 Repetition and omission of strata	73

Worked example	73	<b>6. Igneous rocks</b>	<b>97</b>
<b>4.5 Determining the slip of a fault</b>	<b>73</b>	<b>6.1 Intrusive igneous rocks</b>	<b>97</b>
Worked example	75	<b>6.2 Extrusive igneous rocks</b>	<b>102</b>
<b>4.6 Components of slip</b>	<b>75</b>	<b>7. Folding with cleavage</b>	<b>109</b>
Worked example	76	<b>7.1 Foliations</b>	<b>109</b>
<b>4.7 Classification of faults based on slip</b>	<b>77</b>	<b>7.2 Axial-plane foliations</b>	<b>109</b>
<b>5. Unconformity</b>	<b>89</b>	<b>7.3 The relationship of cleavage to bedding</b>	<b>110</b>
<b>5.1 Types of unconformity</b>	<b>89</b>	Worked example	111
<b>5.2 Overstep and overlap</b>	<b>89</b>	Further reading	115
<b>5.3 Subcrop maps</b>	<b>90</b>	Index	117
Worked example	90		
Worked example	90		
<b>5.4 The geological usefulness of unconformities</b>	<b>92</b>
