Foreword	vii
1 Introduction	1
2 Main Characteristics of the Model	4
Main properties	4
General assumptions	7
3 The Variables and Equations	11
Shortage	11
Household demand and purchases	24
The firms' demand and purchases	26
Production	30
Investment	38
Employment	54
Real wages and household savings	55
Input-output relations	57
Stocks	61
4 Some General Properties of the Model	65
Simple properties	65
Normal path, Harrod-Neumann path	68

5	Control and Stability	75
	Controllability	75
	Endogenous description of the control	76
	Control by norms	77
	Examination of stability	81
	Normal path: non-Walrasian long-term equilibrium	88
6	Efficiency and Employment	93
	Efficiency of consumption	93
	Input-output proportions and shortage	95
	The extensive period: absorption of reserve labour	102
	The intensive period: full employment, labour shortage	109
	Growth rates in the extensive and intensive periods	114
	Transition from the extensive to the intensive period: choice of technique	117
7	Closing Remarks	122
	The role of shortage	123
	The immanent regularities of a socialist economy	125
Appendix A	Summary of the Model	127
	Notation	127
	Equations	130
Appendix B	Statistical Tables	135
Appendix C	Illustrative Computation: Estimation of the Shortage Macroindex	139
Index		143
