Preface 11

1

Introduction 13

1.1 Introduction to Empirical
Propagation Methods 13

1.2 Introduction to Geographical
Information Systems 14

1.3 Advantages of Combining Empirical
Propagation Methods with Geographical
Information Systems 15

1.4 Structure of the Book 16

References 17

2

Empirical Propagation
Methods 19

2.1 Fundamentals of the Empirical

Propagation Methods	19
2.2 Okumura-Hata Model	21
2.3 Cost 231-Hata Model	22
2.4 Ibrahim-Parsons Model	23
2.5 McGeehan and Griffiths Model	24
2.6 Atefi and Parsons Model	24
2.7 Sakagami-Kuboi Model	25
2.8 Ikegami Model	26
2.9 Walfisch and Bertoni Model	27
2.10 Xia and Bertoni Model	29
2.11 Cost 231-Walfisch-Ikegami Model	30
2.12 Stanford University Interim Model	32
2.13 Ericsson Model	34
2.14 Eibert and Kuhlman Model	34
2.15 Analysis of the Required Geometric Parameters to Apply the Empirical Propagation Methods	36
References	38

3

Geographical Information Systems 41

3.1 GIS Definition	42
3.2 GIS Architecture and Components	43

3.2.1	Spatial Databases	44
3.2.2	Edition and Visualization Tools	46
3.2.3	Map Servers	48
3.2.4	High-Level APIs	50
3.2.5	Data Providers	51
3.2.6	User Code	52
3.2.7	Full-Stack Frameworks	53
3.3	Spatial Data Manifestations	54
3.3.1	Raster Data	54
3.3.2	Vector Data	56
3.3.3	Map Types	58
3.3.4	Layers	63
3.3.5	Coordinate Systems	64
3.4	Which GIS Components to Use?	66
3.5	How Will Each Type of Data be Useful?	67
3.5.1	Maps	68
3.5.2	Terrain Height	68
3.5.3	Roads	69
3.5.4	3D Building Shapes	69
3.5.5	Environment Type	70
3.5.6	Geocoding	70
3.5.7	Social Data	71
3.6	GIS Comparison	71
3.6.1	Spatial Databases	72
3.6.2	Edition and Visualization Tools	72
3.6.3	Map Servers	74
3.6.4	High Level APIs	75
3.6.5	Data Providers	76
3.6.6	GIS Offered as Full-Stack Frameworks	78
	References	80

4

Description of the Application 83

- 4.1 Combination of a GIS and a Semiempirical Propagation Method 84
 - 4.1.1 OpenStreetMap 87
 - 4.1.2 Propagation Model 89
- 4.2 Technologies Used 89
- 4.3 Main Features of the Application 91
- 4.4 How to Develop the Application 98
- 4.5 Future Improvements of the Application 106
- References 109

5

Applications 113

- 5.1 Electromagnetic Spectrum 114
- 5.2 Types of Cells in Cellular Networks 114
- 5.3 Main Applications 118
 - 5.3.1 Planning and Optimization of Radio Communication Systems 119
 - 5.3.2 Broadcasting 123
- 5.4 Secondary Applications 125
 - 5.4.1 Precision Agriculture Applications 125
 - 5.4.2 Educational, Research, and Training Applications 127
 - 5.4.3 Applications for Emergency Service Providers 130
 - 5.4.4 Humanitarian Use, Military Defense,

and Public Security	130
5.4.5 Terrain Exploration	131
5.4.6 Other Applications	134
5.5 Computer Software Applications	135
References	138
About the Authors	141
Index	145
