

Contents

<i>Preface</i>	vii
<i>Chapter 1 What national income accounts are about</i>	1
<i>Chapter 2 What is national product?</i>	7
1 Productive and non-productive activities	
2 Intermediate products and final products	
3 Three methods of measuring national product	
4 The 'production boundary'	
5 The arbitrary nature of the production boundary	
6 Transaction in 'second-hand' goods and financial assets	
7 Domestic product versus national product	
8 National product at market prices and at factor cost	
<i>Chapter 3 GNP, welfare and the 'quality of life'</i>	38
1 Limitations of the GNP concept	
2 Alternative measures	
3 GNP, welfare and choice	
<i>Chapter 4 The components of final output</i>	62
1 The two main uses of final product	
2 Consumption: introduction	
3 Consumption: private consumption	
4 Consumption: public consumption	
5 Investment: introduction	
6 Investment: domestic fixed capital formation	
7 Investment: changes in stocks	
8 Investment: exports less imports	
9 The components of final demand: summary and symbolic representation	
10 Eight alternative concepts of total product	
<i>Chapter 5 The system of accounts</i>	92
1 Nature of double-entry accounting	
2 The production account	
3 The counterpart entries to the items in the production account	
4 The capital account	
5 The household account	
6 The government account	

CONTENTS

<i>Chapter 6 The system of accounts and economic theory</i>	113
1 Matrix presentation of accounting system	
2 The 'input-output' table	
3 Application of input-output table	
4 The accounting framework and economic theory	
5 Accounting equations and behavioural equations	
6 Economic 'models'	
<i>Chapter 7 Equality and the distribution of income</i>	129
1 Introduction	
2 Factor shares	
3 The size distribution of income	
<i>Chapter 8 What makes national product change? (I)</i>	158
1 The short-run and the long-run	
2 'Leakages' and 're-injections' in the circular flow of incomes	
3 How 'planned' savings and investment are made equal	
4 How far does adjustment process go?	
5 A quick method of finding the equilibrium level of income and output	
<i>Chapter 9 What makes national product change? (II)</i>	179
1 The consumption function and the equilibrium conditions	
2 The multiplier	
3 The 'static' and the 'dynamic' multipliers	
4 More about leakages and injections	
5 Introducing government and foreign trade into income determination	
6 The full equilibrium conditions	
7 Diagrammatic presentation of full equilibrium conditions	
8 Planned and actual savings and investment in the full model	
<i>Chapter 10 What is a 'change' in national product?</i>	214
1 What is the problem?	
2 The analytical tools	
3 Comparisons of real income and of real output	
4 Quality change	
<i>Chapter 11 The measure of changes in national product</i>	255
1 Real income and the budget line	
2 Choice of prices and the bias in real income comparisons	
3 The index number spread in output comparisons	
4 The relationship between quantity indices and price indices	

5	The use of quantity and price indicators	
6	Methods of estimating changes in real national product	
	<i>Appendix: Summary of main concepts used</i>	286
	<i>Answers to exercises</i>	294
	<i>Index</i>	301
