CHAPTER 1 Introduction	1
1.1 Introduction	1
1.2 Overview of content	3
1.3 Materials overview	4
1.4 General format of presentation	10
1.5 Introduction to body architecture and terminology	13
References	15
CHAPTER 2 Design and material utilization	17
Objective	18
Content	18
2.1 Introduction	18
2.2 Historical perspective and evolving materials technology	19
2.2.1 Body zones and terminology	20
2.2.2 Distinction between body-on-chassis and unitary architecture	20
2.2.3 Early materials and subsequent changes	20
2.3 Finite element analysis	28
2.3.1 Materials for Autobodies	28
2.4 One manufacturer's approach to current design	33
2.4.1 Product requirements	33
2.4.2 Structural dynamics	33
2.4.3 Design for static stiffness	34
2.4.4 Crashworthiness	35
2.4.5 Weight efficiency	36
2.5 Panel dent resistance and stiffness testing	42
2.6 Fatigue	44
2.6.1 Designing against fatigue	46
2.7 Alternative body architecture	48
2.7.1 The unitary aluminum body	48
2.7.2 The pressed spaceframe (or base unit) concept – steel	49
2.7.3 Pressed aluminum spaceframes and associated designs	53
2.7.4 The ASF aluminum spaceframe utilizing castings and profiles	56
2.7.5 Examples of hybrid material designs	62
2.7.6 Designs based on carbon fiber or CFRP	64
2.7.7 Magnesium	74

2.8	Integration of materials into designs	74
2.8.1	General	74
2.8.2	Other materials used in body design	75
2.9	Engineering requirements for plastic and composite components	84
2.10	Cost analysis	85
	Learning points	90
	References	90
CHAPTER 3	Materials for consideration and use in automotive body structures	93
	Objective	94
	Content	94
3.1	Introduction	94
3.2	Material candidates and selection criteria	98
3.2.1	Consistency: a prime requirement	100
3.3	Steel	101
3.3.1	Steel reduction and finishing processes	103
3.3.2	Surface topography	111
3.3.3	Effects in processing	117
3.3.4	Higher strength steels	117
3.4	Aluminum	128
3.4.1	Production process	128
3.4.2	Alloys for use in body structures	129
3.5	Magnesium	132
3.6	Polymers and composites	133
3.6.1	Introduction	133
3.6.2	Thermoplastics	133
3.6.3	Thermosets	134
3.6.4	Polymer and composite processing	135
3.6.5	Advanced composites for competition cars	137
3.7	Repair	139
	Learning points	142
	References	143
CHAPTER 4	The role of demonstration, concept and competition cars	145
	Objective	146
	Content	146
4.1	Introduction	146
4.2	The ECV 3 and ASVT	147
4.3	Collaborative development programs	153
4.3.1	ULSAB and ULSAB 40	153
4.3.2	FreedomCAR program	155

4.3.3	FutureSteelVehicle program	157
4.3.4	SuperLIGHT-CAR project	161
4.3.5	RWTH Aachen University FRP reinforcement program	162
4.4	Concept cars	162
4.5	Competition cars	171
4.5.1	Introduction	171
4.5.2	F1 car structures — why composites?	173
4.5.3	History	173
4.5.4	Extent of use	174
4.5.5	Duty — the survival cell structure	174
4.5.6	Rule conformity and weight	175
4.5.7	Structural efficiency	177
4.5.8	F1 — A good match for composites	177
4.5.9	Design	178
4.5.10	Chassis loading	179
4.5.11	Analysis	180
4.5.12	Materials database	181
4.5.13	Testing	182
4.5.14	Survival cell proving	182
4.5.15	Survival cell crush and penetration	182
4.5.16	Survival cell impact	183
4.5.17	Impact absorber design	184
4.5.18	Construction	185
4.5.19	Tooling	185
4.5.20	Materials	185
4.6	Rally cars	186
4.7	Hypercars	187
	Learning points	189
	References	190
CHAPTER 5	Component manufacture	193
	Objective	194
	Content	194
5.1	Steel formability	194
5.1.1	Sheet metal pressworking	194
5.1.2	Sheet properties and test procedures	198
5.1.3	Effect of surface topography	203
5.1.4	Effect of zinc coatings	205
5.1.5	Tooling materials	205
5.1.6	Hydroforming	208
5.2	Aluminum formability	215
5.2.1	Simultaneous engineering approach to design with aluminum	216
5.2.2	Superplastic forming	225

5.3	Manufacture of components in magnesium	228
5.4	Production of polymer parts	231
5.4.1	CFRP for EV and the future	233
	Learning points	237
	References	238
CHAPTER 6	Component assembly: materials joining technology	241
	Objective	241
	Content	241
6.1	Introduction	242
6.2	Welding	242
6.2.1	Resistance welding	242
6.2.2	Single-sided spot welding	253
6.2.3	Fusion welding	253
6.2.4	Laser welding	255
6.2.5	Friction stir welding	258
6.3	Adhesive bonding	260
6.4	Weldbonding	263
6.5	Mechanical fastening	263
	Learning points	265
	References	266
CHAPTER 7	Corrosion and protection of the automotive structure	269
	Objective	270
	Content	270
7.1	Introduction	270
7.2	Relevant corrosion processes	271
7.2.1	Corrosion of aluminum and other non-ferrous body materials	273
7.2.2	Mechanism of paint degradation	274
7.3	Effective design principles	276
7.3.1	Styling	276
7.3.2	Subassemblies	277
7.3.3	Panels	277
7.4	Materials used for protection of the body structure	278
7.4.1	Zinc-coated steels – types and use for automotive construction	278
7.4.2	Painting of the automotive body structure	289
7.4.3	Environmental improvements in the automotive paint process	292
7.4.4	Supplementary protective systems	293

7.5	Empirical vehicle and laboratory comparisons	295
7.5.1	Vehicle assessments	295
7.5.2	Laboratory tests	295
7.6	Introduction to electrochemical methods	297
	Learning points	304
	References	306
CHAPTER 8	Environmental and safety considerations	309
	Objective	309
	Content	310
8.1	Introduction	310
8.2	Effect of body mass and emissions control	311
8.3	Life-cycle analysis	317
8.4	Recycling and ELV considerations	325
8.4.1	The European recycling program	325
8.4.2	The manufacturer's policy	331
8.4.3	Progress worldwide	335
8.5	Hygiene	337
8.5.1	Heavy metal restrictions	338
8.6	BIW design for safety	339
8.6.1	Euro NCAP frontal impact test	339
8.6.2	Euro NCAP car-to-car side impact test	342
8.6.3	Euro NCAP side-impact pole test	343
8.6.4	Euro NCAP pedestrian protection tests	344
8.6.5	Improving safety performance	345
8.6.6	Influence of materials	347
8.6.7	Formula 1 safety regulations	351
	Learning points	354
	References	355
CHAPTER 9	Future trends in automotive body materials	357
	Objective	358
	Content	358
9.1	Introduction	358
9.2	Geographic aspects	360
9.2.1	Current utilization and vehicle demographics	360
9.2.2	The influence of geography	361
9.2.3	Geographic development of the industry	363
9.2.4	The Japanese influence	365
9.3	Quantitative assessment	370
9.4	Factors influencing material change in the future	370
9.4.1	Influence of environmental controls	371
9.4.2	Emissions control and fuel systems	371

9.4.3 Actual BIW material effects	373
9.4.4 Recycling and ELV legislation	375
9.4.5 Effects of future design and engineering trends	376
9.4.6 Advances in manufacturing technology	379
9.4.7 Improvements in materials specification – trends and requirements	381
9.5 Combined effect of factors on materials utilization within ‘expected’ and ‘accelerated’ timescales	387
9.5.1 Possible consequences regarding BIW materials	391
Learning points	394
References	395
