Kurzfassung	I
Summary	III
Figures	XI
Tables	XIV
Abbreviations	XVI
1 Introduction	1
2 Constructed Wetlands for the Advanced Treatment of Combined Sewer Overflows	6
2.1 Purification processes	7
2.1.1 Filtration.....	8
2.1.2 Sorption.....	10
2.1.3 Ion exchange	13
2.1.4 Biochemical processes	14
2.2 Removal efficiencies	17
2.2.1 Standard parameters	17
2.2.1.1 Oxygen-depleting substances	17
2.2.1.2 Nitrogen compounds.....	18
2.2.1.3 Phosphorous compounds	20
2.2.2 Heavy metals.....	21
2.2.3 Micropollutants	22
2.2.4 Pathogens	25
2.3 Influencing factors on purification processes	28
2.3.1 Water flow and mass transfer	28
2.3.2 Filter material characteristics	31
2.3.3 Clogging	33
2.3.4 Operating conditions.....	34
2.3.5 Throttled outflow and filtration velocity	35

2.3.6 Filter vegetation.....	36
2.3.7 Temperature.....	37
2.3.8 pH value.....	37
2.3.9 Soil vapor and oxygen level.....	37
2.3.10 Redox conditions.....	39
3 Material and Methods.....	40
3.1 Design of experiments.....	45
3.2 Community Level Physiological Profiling.....	47
3.2.1 Experimental design.....	49
3.2.2 Theory behind the experimental method.....	52
3.2.3 Theoretical experiment evaluation and data editing.....	52
3.2.4 Multivariate statistic: PCA and CCorA.....	56
3.2.5 CLPP and the connection to retention soil filters.....	59
3.3 Redox potential.....	61
3.3.1 Chemical processes.....	61
3.3.2 Redox potential in soils.....	63
3.3.3 Influences on the redox potential.....	64
3.3.3.1 Oxygen availability and water saturation.....	64
3.3.3.2 Nutrient availability.....	65
3.3.3.3 Vegetation.....	66
3.3.3.4 pH value.....	66
3.3.3.5 Temperature.....	67
3.3.4 Use of the redox potential to assess the removal efficiency.....	67
3.3.4.1 Redox potential as a control variable in municipal wastewater treatment.....	67
3.3.4.2 Use of the redox potential for mapping the filter state.....	68
4 Elimination of micropollutants in four test-scale constructed wetlands treating combined sewer overflow: influence of filtration layer height and feeding regime.....	71
4.1 Abstract.....	72

4.2	Introduction	72
4.3	Material and Methods	74
4.3.1	Pilot-scale plant	74
4.3.2	Composition and preparation of combined sewage for the study	75
4.3.3	Sampling regime	75
4.3.4	Laboratory analysis	76
4.4	Results	77
4.5	Discussion	80
4.5.1	Diclofenac	81
4.5.2	Carbamazepine	82
4.5.3	Metoprolol	84
4.5.4	Sulfamethoxazole	84
4.5.5	Bisphenol A	85
4.5.6	Benzotriazole	86
4.5.7	Correlations	86
4.5.7.1	Influence of design and operation	86
4.5.7.2	Influence of TOC and DOC concentrations	88
4.6	Conclusions	88
4.7	Acknowledgements	89
4.8	References	89
4.9	Supplementary Material	90
5	Reduction of bacteria and somatic coliphages in constructed wetlands for the treatment of combined sewer overflow (retention soil filters)	97
5.1	Abstract	98
5.2	Introduction	98
5.3	Methods	100
5.3.1	Loading regime and sampling	101
5.3.2	Microbial analysis	102

5.3.3 Further analysis.....	103
5.3.4 Statistical evaluation.....	103
5.4 Results.....	103
5.4.1 Escherichia Coli	104
5.4.2 Intestinal enterococci.....	105
5.4.3 Somatic coliphages	106
5.4.4 Correlations.....	107
5.5 Discussion	107
5.5.1 Influence of antecedent dry period	108
5.5.2 Influence of filtration layer height.....	108
5.5.3 Series connection of RSF 3a+3b.....	109
5.5.4 Influence of TOC and SS concentrations.....	110
5.6 Conclusions	110
5.7 Acknowledgements.....	110
5.8 References	110
6 Redox potential as a method to evaluate the performance of retention soil filters treating combined sewer overflows.....	111
6.1 Abstract.....	112
6.2 Introduction	112
6.3 Material and Methods.....	113
6.3.1 Loading regime and sampling	114
6.3.2 Eh measurement.....	115
6.3.3 Statistical analysis.....	115
6.4 Results and discussions.....	116
6.4.1 Conceptual model of the typical Eh curve following a loading event.....	116
6.4.2 Variations to the conceptual model of the typical Eh curve.....	117
6.4.3 Range of variations	119
6.4.4 Initial potential	120

6.4.5 Duration of the aerobic phase, drop and recovery phase of the Eh	121
6.4.6 Drop of the Eh curve (phase d)	122
6.4.7 Correlation between Eh and removal efficiency	123
6.4.7.1 COD	123
6.4.7.2 Ammonium	125
6.4.7.3 Phosphorous	127
6.4.7.4 Indicator organisms	129
6.4.7.5 Diclofenac	130
6.5 Conclusions	131
6.6 Acknowledgements	133
6.7 References	133
7 Assessing the role of microbial communities in the performance of constructed wetlands used to treat combined sewer overflows	134
7.1 Abstract	135
7.2 Introduction	135
7.3 Materials and methods	137
7.3.1 Set-up of the pilot scale retention soil filters	137
7.3.2 Sampling and processing of samples	139
7.3.3 Statistical Analysis	142
7.4 Results and Discussion	144
7.4.1 Removal efficiencies of the RSFs	144
7.4.2 Microbial Activity	144
7.4.3 Microbial community function	145
7.4.4 Overall relationship between removal efficiency and microbial community function	146
7.4.5 Identification of the microbial community structure	150
7.5 Conclusions	155
7.6 CRediT authorship contribution statement	155
7.7 Declaration of competing interest	155

7.8	Acknowledgements	156
7.9	References	156
7.10	Supplementary Material	157
8	Synopsis.....	159
8.1	Impact of operational parameters.....	159
8.1.1	Filter configuration.....	159
8.1.2	Redox potential	162
8.1.3	Microbial activity.....	163
8.2	Recommendations for system design	166
8.3	Unsettled issues.....	167
9	Conclusions	169
10	References	171
