## List of content

<b>1</b>	<b>Introduction.....</b>	<b>1</b>
1.1	Fermentation technology.....	1
1.1.1	Syngas fermentation.....	3
1.2	Online monitoring at lab scale.....	6
1.3	Objective of this thesis.....	7
<b>2</b>	<b>Online monitoring by applying the anaerobic respiratory activity monitoring system (anaRAMOS) reveals iron(II) limitation in YTF medium for <i>C. ljungdahlii</i>.....</b>	<b>9</b>
2.1	Introduction.....	9
2.2	Materials and methods.....	10
2.2.1	Strain and medium.....	10
2.2.2	Cultivation conditions.....	10
2.2.3	Offline analysis.....	11
2.3	Results and discussion.....	12
2.3.1	Adaption of the cultivation conditions.....	12
2.3.2	Reference cultivation.....	12
2.3.3	Identification of the cultivation phases observed in the reference cultivation.....	14
2.3.4	Iron(II) supplementation for unlimited growth.....	18
2.4	Conclusion.....	23
<b>3</b>	<b>Online measurement of the carbon dioxide transfer rate reveals influence of different trace elements and of ventilation on product spectrum and CO<sub>2</sub> production of <i>C. ljungdahlii</i> cultivated on fructose.....</b>	<b>24</b>
3.1	Introduction.....	24
3.2	Materials and methods.....	26
3.3	Results and discussion.....	26
3.3.1	Influence of trace elements (TE).....	26
3.3.2	Influence of iron(II).....	29

3.3.3	Influence of cobalt(II) .....	32
3.3.4	Influence of nickel(II) .....	33
3.3.5	Comparison of iron(II) or iron(II) + nickel(II) addition .....	36
3.3.6	Influence of ventilation rate on the CO <sub>2</sub> exhaust .....	38
3.4	Conclusion .....	40
<b>4</b>	<b>Transfer of <i>C. ljungdahlii</i> cultivation from YTF medium to ATTC 1754 medium</b> .....	<b>41</b>
4.1	Introduction .....	41
4.2	Materials and methods .....	41
4.2.1	Organism and cultivation medium .....	41
4.2.2	Experimental procedure .....	42
4.3	Results and discussion .....	43
4.3.1	Comparison of YTF medium and ATCC 1754 medium .....	43
4.3.2	Establishment of a reference cultivation process .....	45
4.3.3	Variation of the buffer concentration .....	46
4.4	Conclusion .....	48
<b>5</b>	<b>Online monitoring of syngas cultivation in quasi-continuously ventilated shake flasks .....</b>	<b>49</b>
5.1	Introduction .....	49
5.2	Materials and methods .....	49
5.2.1	Serum bottle cultivation .....	49
5.2.2	Description of the syngas RAMOS and experimental settings .....	50
5.2.3	Organism and cultivation medium .....	52
5.2.4	Experimental procedure .....	52
5.2.5	OD to cell dry weight correlation .....	52
5.3	Results and discussion .....	53
5.3.1	Investigation of the influence of variable CO available in serum bottles .....	53
5.3.2	Cultivation on carbon monoxide .....	54

---

5.3.3	Cultivation on carbon monoxide and hydrogen combination .....	65
5.4	Conclusion.....	70
<b>6</b>	<b>Development and application of a dissolved carbon monoxide measurement system for continuous stirred tank reactor experiments.....</b>	<b>71</b>
6.1	Introduction.....	71
6.2	Materials and methods .....	72
6.2.1	Bacterial strains and culture medium .....	72
6.2.2	Pre-cultures.....	72
6.2.3	Continuous stirred tank reactor experiments.....	72
6.2.4	Offline analysis.....	73
6.2.5	Measurement of dissolved CO tension.....	73
6.3	Results and discussion.....	74
6.3.1	Measurement of dissolved CO tension.....	74
6.3.2	Continuous stirred tank reactor experiment with a sudden increase in CO concentration in the gas supply .....	75
6.3.3	Influence of agitation rate on DCOT in a continuous stirred tank reactor experiment.....	79
6.3.4	Influence of a stepwise increase in the CO concentration in the gas supply on the DCOT in a continuous stirred tank reactor experiment .....	82
6.3.5	Evaluation of the dissolved CO measurement method.....	84
6.4	Conclusion.....	86
<b>7</b>	<b>Summary and outlook .....</b>	<b>87</b>
<b>8</b>	<b>Bibliography .....</b>	<b>90</b>
<b>9</b>	<b>Appendix.....</b>	<b>103</b>
