

Contents

1	Basic Combinatorial Structures	1
1.1	Introduction	1
1.2	Languages	2
1.2.1	Length.....	3
1.2.2	Concatenation	4
1.2.3	The Empty Word	4
1.2.4	Initial Segments	5
1.2.5	\mathcal{A}^* and \mathcal{A}^+	5
1.2.6	Lexicographic Order	5
1.2.7	Set theoretical Notation	6
1.2.8	Listing Series and Algebraic Operations	8
1.3	The 2-Letter Alphabet, Sets, and Lattice Paths.....	9
1.3.1	Sets.....	15
1.3.2	Lattice Paths	16
1.4	The Dyck Language, Ballot Sequences, Nested Parentheses, and 2-Rowed Young Tableaux	21
1.5	Injective Words	33
1.6	Increasing Words	40
1.7	Set Partitions and Restricted Growth Words	44
1.8	Stirling Numbers of the Second Kind	46
1.9	Permutations and Stirling Numbers of the First Kind	50
1.10	Exercises for Chapter 1.....	57
1.11	Sample Quiz for Chapter 1	75
2	Partitions and Generating Functions	77
2.1	Ferrers Diagrams	77
2.2	Generating Functions	82
2.3	The Euler Recursion for the Partition Function	88
2.4	Inversion Generating Function for Permutations.....	94
2.5	Parity	98
2.6	Gaussian Polynomials	100

2.7	Miscellaneous Identities	110
2.7.1	Durfee Square	110
2.7.2	Hook Shapes	111
2.7.3	Classifying All Partitions	112
2.7.4	Self-Conjugate Partitions	115
2.7.5	Partitions with Distinct Parts	118
2.7.6	Binary Expansions	119
2.7.7	Rogers–Ramanujan Identities	120
2.8	Exercises for Chapter 2	122
2.9	Sample Quiz for Chapter 2	132
3	Planar Trees and the Lagrange Inversion Formula	133
3.1	Planar Trees	133
3.1.1	Depth First Order	134
3.1.2	Tree Multiplication	136
3.1.3	The Word of a Tree	137
3.2	Planar Binary Trees	138
3.3	Ternary Trees	143
3.4	Lattice Path Representation for Planar Trees	146
3.5	Combinatorial Enumeration of Binary Trees	149
3.6	A Combinatorial Proof of the Lagrange Inversion Formula	153
3.7	Miscellaneous Applications and Examples	159
3.7.1	Incomplete Binary Trees	159
3.7.2	0-1-2 Trees	160
3.7.3	Enumeration of Binary Trees by External Nodes	161
3.7.4	The Number of Planar Trees	163
3.8	Exercises for Chapter 3	166
3.9	Sample Quiz for Chapter 3	178
4	Cayley Trees	181
4.1	Introduction	181
4.2	The Monomial and the Word of a Cayley Tree	183
4.3	The Prüfer Bijection	186
4.4	Enumeration of Cayley Trees and Cayley Forests	190
4.5	Functional Digraphs, the Joyal Encoding	192
4.6	A Determinantal Formula for Cayley Trees	196
4.7	Extensions and Applications	209
4.8	Exercises for Chapter 4	216
4.9	Sample Quiz for Chapter 4	225
5	The Cayley–Hamilton Theorem	227
5.1	The Cayley–Hamilton Theorem	227
5.2	Miscellaneous Applications and Examples	235
5.2.1	The Division Method	238
5.2.2	The Interpolation Method	239
5.2.3	Solutions of Differential Equations	242

5.2.4	Solutions of Difference Equations	244
5.3	Exercises for Chapter 5	249
5.4	Sample Quiz for Chapter 5	256
6	Exponential Structures and Polynomial Operators	257
6.1	More on Partitions and Permutations	257
6.2	Exponential Structures	262
6.3	The Exponential Formula and Some Applications	267
6.4	Polynomial Operators	273
6.4.1	The Shift Operator	274
6.4.2	The Evaluation Operator	275
6.4.3	The Difference Operator	276
6.4.4	Applications of the Difference Operator	277
6.4.5	Pairs of Polynomial Sequences	279
6.4.6	An Application of the Lagrange Inversion Formula	285
6.5	Miscellaneous Applications and Examples	287
6.5.1	The Mullin–Rota Theory of Polynomial Sequences of Binomial Type	287
6.5.2	Permutations with Even Cycles, Involutions Without Fixed Points	289
6.5.3	Lagrange Interpolation	292
6.6	Exercises for Chapter 6	295
6.7	Sample Quiz for Chapter 6	307
7	The Inclusion-Exclusion Principle	309
7.1	A Special Case	309
7.2	The General Formulation	313
7.3	Two Classical Examples	314
7.3.1	Divisibility Properties	314
7.3.2	Permutations Without Fixed Points	316
7.4	Further Identities	319
7.5	Miscellaneous Applications and Examples	324
7.5.1	The Ménage Problem	324
7.5.2	Rook Numbers and Hit Polynomials	329
7.5.3	Rises of Permutations and Ferrers Boards	341
7.5.4	Descents and Ascents of Permutations	354
7.6	Exercises for Chapter 7	356
7.7	Sample Quiz for Chapter 7	374
8	Graphs, Chromatic Polynomials, and Acyclic Orientations	377
8.1	Graphs	377
8.2	Chromatic Polynomials	381
8.3	Acyclic Orientations	388
8.4	The Cartier–Foata Languages	389
8.5	Planar Graphs	401
8.5.1	Kuratowski’s Theorem	401

8.5.2	Euler's Formula.....	403
8.6	Miscellaneous Applications and Examples.....	410
8.6.1	Spanning Trees and the Matrix-Tree Theorem.....	410
8.6.2	Computation of Chromatic Polynomials.....	415
8.6.3	Trees.....	416
8.6.4	The Circuit Graphs.....	417
8.6.5	The Wheel Graphs.....	418
8.6.6	A Reduction Rule.....	419
8.6.7	Colorings and Inclusion-Exclusion.....	421
8.6.8	The Platonic Solids.....	422
8.7	Exercises for Chapter 8.....	425
8.8	Sample Quiz for Chapter 8.....	444
9	Matching and Distinct Representatives.....	447
9.1	Binary Matrices, Marked Checkerboards, Rook Domains, and Planks.....	447
9.2	The Distinct Representative Theorem.....	452
9.3	Applications.....	455
9.4	The First Available Matching Algorithm.....	459
9.5	Exercises for Chapter 9.....	465
9.6	Sample Quiz for Chapter 9.....	468
	Reference Books.....	469
	Bibliography.....	471
	Index.....	473
