

# CONTENTS

Acknowledgements . . . . .	VII
Preface . . . . .	IX
<b>Chapter 1. Background: models for occupational mobility . . . . .</b>	<b>1</b>
1.1 Introduction . . . . .	1
1.2 Ordinal or nominal occupational variable: single pattern . . . . .	3
1.3 Ordinal or nominal occupational variable: successive patterns . . . . .	15
1.4 Conclusion . . . . .	21
<b>Chapter 2. The discrete-time model for mobility . . . . .</b>	<b>23</b>
2.1 Introduction . . . . .	23
2.2 The incorporation of first job . . . . .	23
2.3 The introduction of occupational categories . . . . .	25
<b>Chapter 3. Forced mobility . . . . .</b>	<b>30</b>
3.1 The Objective . . . . .	30
3.2 The elementary case: the Matras analysis . . . . .	32
3.3 The discrete-time extension . . . . .	37
<b>Chapter 4. Implied mobility . . . . .</b>	<b>42</b>
4.1 Objective . . . . .	42
4.2 The elementary case . . . . .	42
4.3 The role of differential fertility . . . . .	46
<b>Chapter 5. Multiplicative models and means of evaluating them . . . . .</b>	<b>48</b>
5.1 Introduction . . . . .	48
5.2 Quasi-perfect mobility: choice of blocked routes . . . . .	49
5.3 Interpretation of the model . . . . .	53
5.4 Measures for evaluating quasi-independence . . . . .	54

5.5	Evaluating the model (continued): the index of dissimilarity . . . . .	59
5.6	Adjustment for degrees of freedom . . . . .	62
5.7	The maximum value of $\Delta$ and the measure L . . . . .	66
<b>Chapter 6. Quasi-independence applied to mobility data from the United States . . . . .</b>		
6.1	Data from the Six Cities Study . . . . .	70
6.2	Results for the Six Cities . . . . .	74
6.3	Blau and Duncan 17-category tables . . . . .	82
6.4	Exclusion of the farm occupations . . . . .	86
6.5	The effect of collapsing a table: Part I . . . . .	88
6.6	The effect of collapsing a table: Part II . . . . .	90
<b>Chapter 7. Quasi-independence applied to international mobility tables . . . . .</b>		
7.1	Nine 3 x 3 tables . . . . .	94
7.2	Seven 5 x 5 tables . . . . .	104
7.3	Five 9 x 9 tables . . . . .	115
<b>Chapter 8. Conclusions . . . . .</b>		
<b>Appendix 1. The branching process framework . . . . .</b>		
A.	General theory . . . . .	129
B.	Variance-covariance structure of the labor force transition matrix of Section 2.2 . . . . .	133
<b>Appendix 2. Asymptotic results for the discrete-time mobility model . . . . .</b>		
<b>Appendix 3. Program listing for the model of implied mobility . . . . .</b>		
<b>Appendix 4. Constraints on quasi-perfect blockings . . . . .</b>		
<b>Appendix 5. Program listing for the model of quasi-perfect mobility . . . . .</b>		
<b>Appendix 6. Estimating the maximum index of dissimilarity . . . . .</b>		
<b>Appendix 7. Program listing for computation of the maximum index of dissimilarity . . . . .</b>		
<b>Bibliography . . . . .</b>		
<b>Index . . . . .</b>
