

CONTENTS

1 INTRODUCTION AND BACKGROUND, 1

- The idea for research, 1
- Foundation of research: the scientific method, 6
 - The problem, 8
 - Problem identification, 8
 - Problem distillation, 9
 - The hypothesis, 11
 - Comments, 13
- The data, 13
 - Design and planning, 13
 - Collection, 16
 - Analysis, 19
- The inference, 20
- Ancillary foundation topics related to research, 21
 - Differences between science and common sense, 21
 - Four ways of knowing or fixing belief, 23
 - Inductive and deductive reasoning, 24
 - Rationalism versus empiricism, 24
 - Nomothetic net, 25

2 BASIC FOUNDATIONS OF DESIGN, 34

- The concept of control, 34
- Two approaches to experimentation, 35
- Time-series experimental designs, 37
 - The A-B design, 38
 - The A-B-A-B design, 40
 - The multiple-baseline design, 43
- Traditional experimental designs, 47
 - Difference questions, 47
 - Independent group comparisons, 47
 - Repeated-measures comparisons, 49
 - Mixed-group designs, 52
 - Relationship questions, 52
- Design alternatives: comments, 53
- Internal and external validity, 56

3 POTENTIAL DESIGN PITFALLS, 66

Threats to internal validity, 66

History, 66

Maturation, 70

Testing or test practice, 76

Instrumentation, 78

Statistical regression, 81

Hawthorne effect, 82

Bias in group composition, 86

Experimental mortality, 91

Comments, 94

Threats to external validity, 96

Population-sample differences, 97

Experimental arrangements, 98

Pretest influence, 98

Multiple treatment interference, 99

Comments, 100

4 MEASURES AND TASKS, 107

Selection of criterion measures, 107

Selection of a task, 111

Performance range of the experimental task, 111

Ceiling effect, 111

Floor effect, 113

Alteration of task performance range, 114

Performance range: quasi-experimental designs, 116

Comments, 118

5 SUBJECT SELECTION AND ASSIGNMENT, 122

Subject selection, 122

Defining the population, 123

Representativeness of the sample, 125

Various sampling approaches, 126

Simple random sampling, 126

Stratified random sampling, 128

Proportional sampling, 129

Systematic sampling, 130

Cluster sampling, 131

Double sampling, 131

Sample size, 132

Subject selection for different purposes, 133

Comparative or difference questions, 133

Relationship or correlation questions, 134

Subject assignment, 135

Assignment by chance, 135

Captive assignment, 136

Sequential assignment, 138

Comments on chance assignment, 141

Assignment by controlled methods, 142

Summary comments: subject selection and assignment, 146

6 RESEARCH DESIGN RELATED TO STATISTICS, 149

Statistics: what and why, 149

Which statistic? foundations of tool selection, 151

- The nature of the data, 151
 - Nominal data, 152
 - Ordinal data, 152
 - Interval data, 153
 - Ratio data, 153

7 STATISTICS FOR DESCRIPTIVE PURPOSES, 158

- Central tendency measures, 158
 - The mean, 158
 - The median, 160
 - The mode, 161
 - Comments on selection, 161
- Dispersion measures, 165
 - The range, 166
 - The semi-interquartile range, 166
 - The standard deviation, 167
 - Comments on selection, 168

8 STATISTICS FOR INFERENCE PURPOSES, 173

- The inferential purpose, 173
 - General background, 173
 - Parametric and nonparametric issues, 174
 - Assumptions, 175
 - Nature of the data, 175
 - Sample size, 176
 - Comments on parametric and nonparametric statistics, 177
- Difference questions: which statistic and when, 179
 - Comparing two data points, 179
 - Independent comparisons, 179
 - Nonindependent comparisons, 181
 - Comparing more than two data points, 185
 - One experimental variable, 185
 - Two experimental variables, 190
 - Logical extrapolations: more complex designs, 193
 - Using more complex designs, 193
 - Problems with more complex designs, 194
- Relationship questions: which statistic and when, 195
 - Comments, 199

9 STATISTICAL RESULTS AS RELATED TO BEHAVIOR, 205

- Research as an integrated process, 205
 - Theory related to the research question, 206
 - The question related to method and analysis, 207
- Interpretation of results, 209
- Comments, 211

GLOSSARY, 212
