<i>Preface</i>	v
<i>Contributors</i>	ix

PART I ENGINEERING MAMMALIAN CELLS TO SENSE BIOLOGICALLY RELEVANT INPUTS

1 Generation of CAR-T Cells by Lentiviral Transduction	3
<i>Atsushi Okuma</i>	
2 Synthetic Receptors for Sensing Soluble Molecules with Mammalian Cells	15
<i>Leo Scheller</i>	
3 Engineering Mammalian Cells to Control Glucose Homeostasis	35
<i>Jiawei Shao, Xinyuan Qiu, and Mingqi Xie</i>	
4 Using Engineered Mammalian Cells for an Epitope-Directed Antibody Affinity Maturation System	59
<i>Akihiro Eguchi and Masahiro Kawahara</i>	
5 Purification of Specific Cell Populations Differentiated from Stem Cells Using MicroRNA-Responsive Synthetic Messenger RNAs	73
<i>Hideyuki Nakanishi and Hirohide Saito</i>	

PART II ENGINEERING MAMMALIAN CELLS TO SENSE ARTIFICIAL INPUTS

6 Green Light-Controlled Gene Switch for Mammalian and Plant Cells	89
<i>Nils Schneider, Claire V. Chatelle, Rocio Ochoa-Fernandez, Matias D. Zurbriggen, and Wilfried Weber</i>	
7 Sonogenetic Modulation of Cellular Activities in Mammalian Cells	109
<i>Yao-Shen Huang, Ching-Hsiang Fan, Wei-Ting Yang, Chih-Kuang Yeh, and Yu-Chun Lin</i>	
8 Constructing Smartphone-Controlled Optogenetic Switches in Mammalian Cells	125
<i>Yuanhuan Yu, Guiling Yu, and Haifeng Ye</i>	
9 Constructing a Smartphone-Controlled Semiautomatic Theranostic System for Glucose Homeostasis in Diabetic Mice	141
<i>Guiling Yu, Yuanhuan Yu, and Haifeng Ye</i>	
10 Construction of Caffeine-Inducible Gene Switches in Mammalian Cells	159
<i>Daniel Bojar</i>	

PART III PRECISE GENOME ENGINEERING TECHNIQUES
USING CRISPR-CAS SYSTEMS

- 11 Multiplexed Genome Engineering with Cas12a. 171
Niels R. Weisbach, Ab Meijs, and Randall J. Platt
- 12 Highly Multiplexed Analysis of CRISPR Genome Editing
Outcomes in Mammalian Cells 193
Soh Ishiguro and Nozomu Yachie
- 13 Optical Control of Genome Editing by Photoactivatable Cas9 225
Takahiro Otabe, Yuta Nihongaki, and Moritoshi Sato

PART IV ENGINEERING MAMMALIAN CELLS IN COMBINATION WITH
CHEMICAL COMPOUNDS/SYSTEMS

- 14 Chemogenetic Control of Protein Localization and Mammalian
Cell Signaling by SLIPT 237
Sachio Suzuki, Yuka Hatano, Tatsuyuki Yoshii, and Shinya Tsukiji
- 15 Engineering Hydrogel Production in Mammalian Cells to
Synthetically Mimic RNA Granules 253
Hideki Nakamura
- 16 AgDD System: A Chemical Controllable Protein Aggregates in Cells 277
Tsuke Miyazaki
- 17 Intracellular Unnatural Catalysis Enabled by an Artificial Metalloenzyme 287
Yasunori Okamoto and Ryosuke Kojima
- 18 Feeder-Free Human Induced Pluripotent Stem Cell Culture Using
a DNA Aptamer-Based Mimic of Basic Fibroblast Growth Factor 301
Yuri Hayata, Ryosuke Ueki, and Shinsuke Sando

PART V NEW TECHNIQUES TO ENGINEER SPECIFIC MAMMALIAN
CELLS IN A TARGETED MANNER

- 19 Protocol for De Novo Gene Targeting Via In Utero Electroporation. 309
Yuji Tsunekawa, Raymond Kunikane Terhune, and Fumio Matsuzaki
- 20 Magnetically Single-Cell Virus Stamping. 321
Rajib Schubert
- Index* 329
