1	Galois cohomology	3
1.1	Quaternion algebras and conics	4
1.1.1	Quaternions	4
1.1.2	Conics	7
1.2	The language of central simple algebras	9
1.2.1	Central simple algebras	10
1.2.2	Cyclic algebras	13
1.2.3	C_1 -fields	13
1.3	The language of Galois cohomology	15
1.3.1	Group cohomology and Galois cohomology	15
1.3.2	Galois descent	17
1.3.3	Cohomological description of the Brauer group	21
1.3.4	Cyclic algebras, cup-products and the Kummer sequence	24
1.4	Galois cohomology of discretely valued fields	26
1.4.1	Serre residue	27
1.4.2	Extensions of rings	32
1.4.3	Witt residue	34
1.4.4	Compatibility of residues	37
1.5	The Faddeev exact sequences	39
2	Étale cohomology	43
2.1	Topologies, sites, sheaves	44
2.1.1	Grothendieck topologies	44
2.1.2	Presheaves and sheaves	45
2.1.3	Direct and inverse images	47
2.1.4	Sheaves on the small étale site	49
2.2	Cohomology	50
2.2.1	Definition and basic properties	50
2.2.2	Passing to the limit	52
2.2.3	Étale and Galois cohomology	53

2.2.4	Standard spectral sequences	54
2.3	Cohomological purity	56
2.3.1	Absolute purity with torsion coefficients	56
2.3.2	The Gysin exact sequence	58
2.3.3	Cohomology of henselian discrete valuation rings	60
2.3.4	Gysin residue and functoriality	60
2.4	H^1 with coefficients \mathbb{Z} and \mathbb{G}_m	64
2.5	The Picard group and the Picard scheme	65
2.6	Excellent rings	69
3	Brauer groups of schemes	71
3.1	The Brauer–Azumaya group	72
3.2	The Brauer–Grothendieck group	73
3.2.1	The Kummer exact sequence	74
3.2.2	The Mayer–Vietoris exact sequence	75
3.2.3	Passing to the reduced subscheme	76
3.3	Comparing the two Brauer groups, I	77
3.4	Localising elements of the Brauer group	79
3.5	Going over to the generic point	81
3.6	Schemes of dimension 1	84
3.6.1	Regular schemes of dimension 1	84
3.6.2	Singular schemes of dimension 1	88
3.7	Purity for the Brauer group	90
3.8	The Brauer group and finite morphisms	95
4	Comparing the two Brauer groups, II	101
4.1	The language of stacks	101
4.1.1	Fibred categories	101
4.1.2	Stacks	104
4.1.3	Algebraic spaces and algebraic stacks	105
4.1.4	Gerbes	107
4.1.5	Twisted sheaves	111
4.2	de Jong’s proof of Gabber’s theorem	113
5	Varieties over a field	121
5.1	The Picard group of a variety	121
5.1.1	Picard variety	123
5.1.2	Albanese variety and Albanese torsor	125
5.2	The geometric Brauer group	126
5.3	The Tate module of the Brauer group as a Galois representation	134
5.4	Algebraic and transcendental Brauer groups	138
5.4.1	The Picard group and the algebraic Brauer group	138
5.4.2	Geometric interpretation of differentials	139
5.4.3	Galois invariants of the geometric Brauer group	143

5.5	Projective varieties with $H^i(X, \mathcal{O}_X) = 0$	146
5.6	The Picard and Brauer groups of curves	148
5.7	The Picard and Brauer groups of a product	150
5.7.1	The Picard group of a product	150
5.7.2	Topological Künneth formula in degrees 1 and 2	153
5.7.3	Künneth formula for étale cohomology in degrees 1 and 2	155
6	Birational invariance	165
6.1	Affine and projective spaces	165
6.2	The unramified Brauer group	167
6.3	Examples of unramified classes	171
6.4	Zero-cycles and the Brauer group	174
7	Severi–Brauer varieties and hypersurfaces	181
7.1	Severi–Brauer varieties	181
7.1.1	Two applications of Severi–Brauer varieties	185
7.1.2	Torsors for tori as birational models of Severi–Brauer varieties	186
7.1.3	Morphisms to Severi–Brauer varieties	189
7.2	Projective quadrics	191
7.3	Some affine hypersurfaces	194
8	Singular schemes and varieties	199
8.1	The Brauer–Grothendieck group is not always a torsion group	200
8.2	Isolated singularities	202
8.3	Intersections of hypersurfaces	205
8.4	Projective cones	208
8.5	Singular curves and their desingularisation	210
8.6	Some examples	213
9	Varieties with a group action	215
9.1	Tori	215
9.2	Simply connected semisimple groups	220
9.3	Theorems of Bogomolov and Saltman	221
9.4	Homogeneous spaces over an arbitrary field	225
10	Schemes over local rings and fields	231
10.1	Split varieties and split fibres	231
10.1.1	Split varieties	231
10.1.2	Split fibres	234
10.2	Quadrics over a discrete valuation ring	240
10.2.1	Conics	241
10.2.2	Quadric surfaces	243
10.3	Schemes of dimension 2	246
10.4	Smooth proper schemes over a henselian discrete valuation ring	252

10.5	Varieties over a local field	255
10.5.1	Evaluation at rational and closed points	256
10.5.2	The index of a variety over a p -adic field	259
10.5.3	Finiteness results for the Brauer group	259
10.5.4	Unramified Brauer classes and evaluation at points	261
11	Families of varieties	263
11.1	The vertical Brauer group	264
11.2	Families of split varieties	270
11.3	Conic bundles	272
11.3.1	Conic bundles over a curve	273
11.3.2	Conic bundles over a complex surface	277
11.3.3	Variations on the Artin–Mumford example	283
11.4	Double covers	286
11.5	The universal family of cyclic twists	288
12	Rationality in a family	295
12.1	The specialisation method	295
12.1.1	Main theorem	295
12.1.2	Irrational conic bundles with smooth ramification	297
12.2	Quadric bundles over the complex plane	299
12.2.1	A special quadric bundle	299
12.2.2	Rationality is not deformation invariant	301
13	The Brauer–Manin set and the formal lemma	305
13.1	Number fields	305
13.1.1	Primes and approximation	306
13.1.2	Class field theory and the Brauer group	307
13.1.3	Adèles and adelic points	311
13.2	The Hasse principle and approximation	313
13.3	The Brauer–Manin obstruction	316
13.3.1	The Brauer–Manin set	316
13.3.2	The structure of the Brauer–Manin set	322
13.3.3	Examples of Brauer–Manin obstruction	326
13.3.4	The Brauer–Manin set of a product	334
13.4	Harari’s formal lemma	338
14	Rational points in the Brauer–Manin set	345
14.1	Rationally connected varieties: a conjecture	346
14.2	Schinzel’s hypothesis and additive combinatorics	350
14.2.1	Applications of Schinzel’s hypothesis	350
14.2.2	Additive combinatorics enters	353
14.2.3	Hypothesis of Harpaz and Wittenberg	357
14.2.4	Main steps of the proof of Theorem 14.2.14	360
14.2.5	Fibrations with two non-split fibres and ramified descent	367

14.3	Beyond the Brauer–Manin obstruction	370
14.3.1	Insufficiency of the Brauer–Manin obstruction	370
14.3.2	Quadric bundles over a curve, I	370
14.3.3	Distinguished subsets of the adelic space	372
14.3.4	Quadric bundles over a curve, II	375
14.3.5	Curves, K3 surfaces, Enriques surfaces	379
15	The Brauer–Manin obstruction for zero-cycles	381
15.1	Local-to-global principles for zero-cycles	381
15.2	From rational points to zero-cycles	384
15.3	Salberger’s method	387
15.4	A fibration theorem for zero-cycles	389
16	The Tate conjecture, abelian varieties and K3 surfaces	395
16.1	Tate conjecture for divisors	396
16.2	Abelian varieties	401
16.3	Varieties dominated by products	404
16.4	K3 surfaces	408
16.5	Kuga–Satake variety	411
16.6	Moduli spaces of K3 surfaces and Shimura varieties	414
16.7	Tate conjecture and Brauer group of K3 surfaces	420
16.8	Diagonal surfaces	422
