

CONTENTS

PART ONE: AN OVERVIEW

CHAPTER ONE	Systems Theory: An Introduction	3
	<i>Basic Concepts of Systems Theory. Synchrony, Dynamics, and Diachrony. The Logic of Systems Analysis. An Introductory Example.</i>	

PART TWO: STRUCTURE AND FUNCTION: SYNCHRONIC ANALYSIS

CHAPTER TWO	The Structure of a System	25
	<i>Temporal Covariation of States and Their Invariant Transformation. Elements and Operations. Inputs, Outputs, and States of a System. A Caveat: Physical Interpretation of Systems Logic. Interconnections and Order of Operations. The Concept of Structure.</i>	
CHAPTER THREE	The Function of a System	48
	<i>Function, Inputs, Outputs, and Time. Operations as System Functions. Function, Structure, and Types of Systems. The Function of a System. The Function of the System: A Generalization.</i>	

CHAPTER FOUR	From Structure to Function: Forward Path, Regulation, and Feedback Loops	81
	<i>Graph Algebra and the Forward Path. Regulation and Control. Graph Algebra and the Feedback Path. Graph-Reduction Techniques. Multiple-Input-Output Systems.</i>	
CHAPTER FIVE	Techniques of Systems Analysis: Some Illustrations	121
	<i>Simultaneous Systems. Discrete-Time Systems. Continuous-Time Systems: I. General Theory. Continuous-Time Systems: II. Some Illustrations.</i>	
SUMMARY OF PART TWO		149
PART THREE: DYNAMIC ANALYSIS: THE BEHAVIOR OF SYSTEMS OVER TIME		
CHAPTER SIX	System Response: An Introduction	153
	<i>Studying the Behavior of a System Over Time. Autonomous and Forced Response of a System. Some Special Topics in the Analysis of Systems. Some Useful Input Functions.</i>	
CHAPTER SEVEN	The Response of Simultaneous Systems	169
	<i>Obtaining the Response. States of the System as Responses. Simultaneous Systems as Limits of Dynamic Systems.</i>	
CHAPTER EIGHT	The Response of Discrete-Time Systems	179
	<i>General Considerations. Discrete Model I. Discrete Model II. Discrete Model III.</i>	
CHAPTER NINE	The Response of Continuous-Time Systems	205
	<i>General Considerations. Continuous Model I. Continuous Model II. Continuous Model III. Unit-Impulse Function and System Response.</i>	

CHAPTER TEN	The Weight of Past History: Memory of a System	231
	<i>Memory of a System: A Definition. Some Illustrations. Electoral Mobilization and Electoral Change in Norway and Sweden.</i>	
CHAPTER ELEVEN	Systems With Time-Dependent Structure	250
	<i>Systems with Variable Boundaries. Systems with Time-Dependent Characteristic Structures. Nonlinear Systems. Logical Decision Systems. A Note on the Role of Simulation in System Analysis.</i>	
EPILOGUE	Implications of the Systems Approach for Theory and Research	269
	<i>Systems As Theoretical Objects. Synchrony and Dynamics. Stability and Development. (Re)production of Synchrony and Diachronic Change.</i>	
APPENDIX ONE	Linear Operators and Operators As Elementary Systems	293
APPENDIX TWO	Difference Equations with Constant Coefficients	301
	<i>Complex Roots. Solved Examples. A Comment on Stability and Qualitative Behavior.</i>	
APPENDIX THREE	Laplace Transformation	315
	<i>Decomposition into Partial Fractions (Heaviside's Rule). Convolution.</i>
