1	Introduction	1
1.1	Thesis overview	4
2	Theoretical background	7
2.1	Contact angle and wetting of ideal smooth surfaces	8
2.1.1	Wetting of non-ideal rough surfaces	11
2.2	Contact angle hysteresis	13
2.3	Droplet coalescence	15
2.3.1	Propagation of the liquid bridge	19
2.3.2	Oscillation of the combined droplet	22
2.3.3	Induced capillary-wave	23
2.4	Self-propelled droplet jumping	25
2.4.1	Literature review	27
2.4.2	Prediction of jumping velocity	33
3	Numerical modeling and interface capturing approach	39
3.1	Equations of motion	39
3.1.1	Volume-of-Fluid	40
3.1.2	Drawbacks of interFoam	43
3.1.3	Solver modifications	44
3.1.4	Validation	46
3.2	Initialization and simulation set-up	58
3.2.1	Evaluation	59
4	Binary droplet coalescence	61
4.1	Symmetrical droplet jumping	61

4.1.1	Energy analysis	67
4.1.2	Influence of Ohnesorge number and contact angle	74
4.1.3	Time scale of the jumping process	78
4.2	Comprehensive study	81
4.2.1	Jumping efficiency	89
4.2.2	Comparison to experimental data	90
4.3	Chapter summary	96
5	Influence of gravity and size mismatch on droplet jumping	99
5.1	Influence of gravity	101
5.1.1	Sessile droplet shape	101
5.1.2	Static energy balance	103
5.1.3	Kinematics of jumping	105
5.1.4	Energetics of jumping	108
5.1.5	Parameter variation	110
5.2	Influence of droplet mismatch	113
5.2.1	Static energy balances	114
5.2.2	Exemplary case of droplet jumping	116
5.2.3	Jumping velocity and jumping angle	121
5.2.4	Transition from adhering to jumping	125
5.3	Chapter summary	130
6	Conclusion and outlook	131
	Bibliography	133
