

Contents

Chapter 1. Introduction	1
1.1. Presentation of the problem	1
1.2. Some known results	2
1.3. Main results	3
1.4. Main ideas	4
Chapter 2. Tools of paradifferential operators	7
2.1. Paradifferential operators	7
2.2. Functional spaces	8
2.3. Symbolic calculus	9
2.4. Tame estimates in Sobolev space	10
2.5. Tame estimates in Chemin-Lerner spaces	14
2.6. Commutator estimates	15
Chapter 3. Parabolic evolution equation	21
Chapter 4. Elliptic estimates in a strip	23
4.1. Elliptic boundary problem	23
4.2. Flattening the boundary and parilinearization	25
4.3. Elliptic estimates in Sobolev space	27
4.4. Tame elliptic estimates	31
4.5. Elliptic estimates in Besov space	35
4.6. Interior $W^{1,p}$ estimate	36
Chapter 5. Dirichlet-Neumann operator	37
5.1. Definition and parilinearization	37
5.2. Sobolev estimate of the remainder	38
5.3. Tame estimate of the remainder	40
5.4. Hölder estimate of the remainder	40
Chapter 6. New formulation and parilinearization	43
6.1. New formulation	43
6.2. Parilinearization	44
Chapter 7. Estimate of the pressure	47
7.1. H^2 estimate of the pressure	47
7.2. Hölder estimate of the pressure	49
7.3. Sobolev estimate of the pressure	52
7.4. Estimate of a	53
Chapter 8. Estimate of the velocity	55

8.1. Sobolev estimate of the velocity	55
8.2. The estimate of the irrotational part	55
8.3. The estimate of the rotational part	56
Chapter 9. Proof of break-down criterion	59
9.1. The H^1 energy estimate	59
9.2. Energy estimate of the trace of the velocity and the free surface	60
9.3. Energy estimate of the vorticity	63
9.4. Nonlinear estimates	65
9.5. Energy functional	70
9.6. Proof of Theorem 1.3	72
Chapter 10. Iteration scheme	75
10.1. Strategy	76
10.2. Iteration scheme	79
10.3. Existence of iteration scheme	82
Chapter 11. Uniform energy estimates	87
11.1. Set-up	87
11.2. Energy functional	88
11.3. Estimate of the velocity	90
11.4. Estimate of the pressure	92
11.5. Estimates of the remainder of DN operator	93
11.6. Energy estimates	95
11.7. Nonlinear estimates	97
11.8. Completion of the uniform estimate	98
Chapter 12. Cauchy sequence and the limit system	101
12.1. Set-up	101
12.2. Elliptic estimates with a parameter	102
12.3. Energy estimates	104
12.4. The limit system	104
Chapter 13. From the limit system to the Euler equations	107
Chapter 14. Proof of Theorem 1.1	111
14.1. Construction of approximate smooth solution	111
14.2. Uniform estimates and existence	111
14.3. Uniqueness of the solution	115
Acknowledgement	116
Bibliography	117
