

TABLE OF CONTENTS

	Page
1 INTRODUCTION.....	1
1.1 Definition	1
1.2 Motivation for Correlative TEM/APT	1
1.3 Remark Concerning SEM Techniques	2
2 METHOD DEVELOPMENT.....	4
2.1 Experimental Setup	4
2.1.1 Short History of Correlative TEM/APT.....	4
2.1.2 Advantages of Improved Experimental Setup.....	4
2.1.3 Specimen Preparation.....	5
2.1.4 Material.....	5
2.1.5 Preparation of the Grid.....	5
2.1.6 The Grid Holder.....	7
2.1.7 Performance in the TEM.....	8
2.1.8 Performance in the Atom Probe.....	13
2.1.9 Alignment between Experimental Components.....	14
2.2 SEM or TEM?	16
2.2.1 SEM Techniques.....	16
2.2.2 TEM Techniques.....	18
2.3 Improving the Measurement Yield	23
2.3.1 Reasons for the Reduction in Yield.....	23
2.3.2 Cleaning by Plasma or Focused Ion Beam Milling.....	26
2.3.3 Experimental Details.....	29
2.3.4 Cleaning by Argon Ions.....	30
2.3.5 Specimen Oxidation Due to Electrostatic Charging.....	32

3	APPLICATION EXAMPLES	36
3.1	Grain Boundary Segregation	36
3.1.1	Key Role of Correlative TEM/APT	36
3.1.2	Abstract	37
3.1.3	Introduction to Grain Boundary Segregation	37
3.1.4	Material and Methods	39
3.1.5	Experimental Insights	41
3.1.6	Influence of Grain Boundary Character on Carbon Segregation	43
3.1.7	Conclusions	45
3.2	Linear Complexions	47
3.2.1	Key Role of Correlative TEM/APT	47
3.2.2	Copyright Note	47
3.2.3	Abstract	47
3.2.4	Introduction to Complexions	48
3.2.5	Material and Methods	48
3.2.6	Evidence for Linear Complexions	50
3.2.7	Stabilization of Austenite in Strain Field of Dislocations	54
3.3	Mechanical Mixing	59
3.3.1	Key Role of Correlative TEM/APT	59
3.3.2	Abstract	59
3.3.3	Emission of Ions and Nanoparticles from Hip Implants	60
3.3.4	Materials and Methods	62
3.3.5	Titanium and Cobalt Alloy Systems: Microstructure before the Fretting Tests	63
3.3.6	Wear Surface and Subsurface Features of the Titanium Alloy	66
3.3.7	Alpha Titanium Particles	69
3.3.8	Wear Surface and Subsurface Analysis of the Cobalt Alloy	70

3.3.9	Composition of the Tribomaterial and Serum after the Fretting Tests.....	71
3.3.10	Mechanism of Ion Release.....	71
3.4	Shear Bands	76
3.4.1	Key Role of Correlative TEM/APT	76
3.4.2	Abstract.....	76
3.4.3	Shear Bands in Metallic Glasses	77
3.4.4	Material and Methods.....	78
3.4.5	Discussion of Compositional Variations in Shear Bands.....	80
3.4.6	Conclusions.....	85
3.5	Habit Plane Indexing	87
3.5.1	Key Role of Correlative TEM/APT	87
3.5.2	Abstract.....	88
3.5.3	The Iron-Carbon System at Low Temperature	88
3.5.4	Material and Methods.....	90
3.5.5	Results and Discussion	92
	Microstructural Overview.....	92
	Correlation between Structures Visible in SEM, TEM and APT	95
	Phase Identification of Carbon-Rich Regions.....	98
	Phase Localization.....	100
	Habit Plane Analysis and Discussion.....	102
	Compositional Analysis.....	106
	Microstructure Stability.....	112
	Discussion of Kinetics and Thermodynamics.....	112
3.6	Strain Mapping	116
3.6.1	Key Role of Correlative TEM/APT	116
3.6.2	Abstract.....	116
3.6.3	Introduction to Coherent Interfaces.....	116
3.6.4	Material and Methods.....	118

3.6.5	Strain Mapping	122
3.6.6	Comparison to Theory	125
3.6.7	Conclusions	127
3.7	Phase Identification	128
3.7.1	Key Role of Correlative TEM/APT	128
3.7.2	Abstract	128
3.7.3	Introduction to Quenching and Partitioning Steels.....	129
3.7.4	Materials and Method	131
	Model Alloy Design and Processing.....	131
	Microstructure Characterization	134
	Atomic Scale Analysis by APT	135
3.7.5	Results	136
	Confirmation of the Absence of Bainite Transformation during the Partitioning Step	136
	Microstructure Investigation in the SEM.....	137
	Identification of Phases by Correlative TEM/APT.....	139
	Change in the Carbon Distribution During Tempering	140
3.7.6	Discussion	146
	Comparison between Carbon Concentrations in Austenite as Measured via XRD and APT	146
	Carbon Distribution in the As-Quenched Specimen.....	148
	Comparison between Experiments and Constrained Carbon Equilibrium Theory	149
	Mn Partitioning between Martensite and Austenite	152
3.7.7	Conclusions	153
3.8	Slip Planes	154
3.8.1	Key Role of Correlative TEM/APT	154
3.8.2	Abstract	154
3.8.3	Introduction to Gamma-Kappa Alloys.....	155
3.8.4	Material and Methods	156

3.8.5	Results.....	159
	Precipitation State after Isothermal Annealing	159
	Plastic Yielding and Strain Hardening Performance.....	161
	Dislocation/Precipitate Interactions during Deformation.....	162
	Evolution of the Deformation Structure	168
3.8.6	Discussion	171
	Strengthening Mechanisms	171
	Strain Hardening Mechanisms	180
	Deformation Structure Evolution in the Precipitation- Hardened Alloy.....	185
3.8.7	Conclusions.....	187
4	OUTLOOK	189
	4.1.1 Potential Future Developments in the Field of Correlative EM / APT.....	189
	4.1.2 The Potential of Electron Channeling Contrast Imaging.....	189
	4.1.3 The Need for 3D TEM Orientation Mapping Techniques.....	190
5	CONCLUSIONS.....	192
6	REFERENCES.....	194
