<b>Preface</b>	<b>ix</b>
<b>I Asymptotic methods solve algebraic and differential equations</b>	<b>1</b>
1 Perturbed algebraic equations solved iteratively	5
2 Power series solve ordinary differential equations	33
3 A normal form of oscillations illuminates their character	63
<b>Part I Summary</b>	<b>107</b>
<b>II Center manifolds underpin accurate modeling</b>	<b>109</b>
4 The center manifold emerges	113
5 Construct slow center manifolds iteratively	169
<b>Part II Summary</b>	<b>217</b>
<b>III Macroscale spatial variations emerge from microscale dynamics</b>	<b>219</b>
6 Conservation underlies mathematical modeling of fluids	223
7 Cross-stream mixing causes longitudinal dispersion along pipes	243
8 Thin fluid films evolve slowly over space and time	271
9 Resolve inertia in thicker faster fluid films	295
<b>Part III Summary</b>	<b>315</b>
<b>IV Normal forms illuminate many modeling issues</b>	<b>317</b>
10 Normal-form transformations simplify evolution	323
11 Separating fast and slow dynamics proves modeling	341

---

12	<i>Appropriate initial conditions empower accurate forecasts</i>	377
13	<i>Subcenter slow manifolds are useful but do not emerge</i>	405
	<b>Part IV Summary</b>	441
V	<b>High-fidelity discrete models use slow manifolds</b>	443
14	<i>Introduce holistic discretization on just two elements</i>	447
15	<i>Holistic discretization in one space dimension</i>	471
	<b>Part V Summary</b>	505
VI	<b>Hopf bifurcation: Oscillations within the center manifold</b>	507
16	<i>Directly model oscillations in Cartesian-like variables</i>	511
17	<i>Model the modulation of oscillations</i>	529
	<b>Part VI Summary</b>	567
VII	<b>Avoid memory in modeling nonautonomous systems, including stochastic</b>	569
18	<i>Averaging is often a good first modeling approximation</i>	575
19	<i>Coordinate transforms separate slow from fast in nonautonomous dynamics</i>	585
20	<i>Introducing basic stochastic calculus</i>	625
21	<i>Strong and weak models of stochastic dynamics</i>	685
	<b>Part VII Summary</b>	721
	<b>Bibliography</b>	725
	<b>Index</b>	743
