Table of contents

Acknowledgement I
Abstract III
Table of contents V
Chapter 1 Introduction 1
1.1 Research background 1
1.2 Literature review 4
1.2.1 Pavement compaction scenarios 4
1.2.2 Evaluation methods of pavement compaction 5
1.2.3 Numerical simulation used in pavement compaction 5
1.2.4 Innovative technologies used in pavement compaction 7
1.3 Motivation and objectives 8
1.4 Working hypothesis and research methodology 9
1.5 Dissertation structure 11
Chapter 2 Intellectual testing in pavement construction: SmartRock 14
2.1 Intellectual measurement of pavement materials 14
2.2 Real-time measuring model with SmartRock 16
2.3 Manufacture of SmartRock shell 18
2.4 Preliminary application of SmartRock 22
2.4.1 Description of the application background 22
2.4.2 Raw materials and testing device 23
2.4.3 Results and discussion 26
2.5 Summary 34
Chapter 3 Compaction test with SR real-time measuring model 36
3.1 Theoretical background 36
3.1.1 Workability 36
3.1.2 Roller compaction simulation 38
3.2 Compaction tests in the laboratory 40
3.2.1 Raw materials and testing device 40
3.2.2 Study of the material workability during compaction 40
3.2.3 Study of the sector roller compaction test in the laboratory 43
3.3 In-situ pavement compaction 49
3.3.1 Basics of the test track and the SmartRock installation 49
3.3.2 Test results and discussion 53
3.4 Summary 58
Chapter 4 Development of DEM model for paver compaction 61
4.1 Contact model for granular material 61
4.2 Constitutive behavior of granular materials with bonding 64
4.3 Establishment of an aggregate database with morphological properties 66
4.4 Verification of contact model 71
4.4.1 Physical parameters verification 71
4.4.2 DEM simulation of repose angle 72
4.4.3 Comparison analysis for repose angle test 74
4.5 Summary 76
Chapter 5 Aggregate database extension and application 78
5.1 research background of deep leaning 78
5.2 Methodology 80

5.3 Model selection and adjustment 81
5.3.1 ACGAN and ACWGAN-gp 81
5.3.2 Model fine tuning optimization and image enhancement 85
5.4 Input dataset and parameters of the coarse aggregate used for training 86
5.5 Results and discussion 87
5.5.1 Models comparison and validation 87
5.5.2 Model performance and parameter adjustment 90
5.6 Validation for dem input and aggregate model generation 93
5.7 Summary 97
Chapter 6 DEM 3D simulation of pavement pre-compaction 100
6.1 Simulation of blending test 100
6.1.1 Model generation and trail test 100
6.1.2 DEM 3D simulation of blending test with real mixture gradations 102
6.2 Pavement pre-compaction model 104
6.2.1 Contact model and parameters 104
6.2.2 Development of pre-compaction model in DEM 105
6.2.3 Virtual simulation of the pre-compaction 106
6.2.4 Experimental test of pre-compaction for model validation 107
6.3 Results and discussion 108
6.3.1 The average angular velocity during pre-compaction 108
6.3.2 Influence of paving thickness on pre-compaction 111
6.3.3 Influence of paving angle on pre-compaction 112
6.3.4 Influence of paving speed on pre-compaction 115
6.4 Summary 117
Chapter 7 Conclusions and outlook 119
7.1 Conclusions of the thesis 119
7.2 Outlook for the future research 121
Reference 123
