Contents

Part I. Elements of functional analysis

1 Lebesgue spaces 3
- 1.1 Heuristic motivation 3
- 1.2 Lebesgue measure 4
- 1.3 Lebesgue integral 7
- 1.4 Lebesgue spaces 8

2 Weak derivatives and Sobolev spaces 15
- 2.1 Differentiation 15
- 2.2 Sobolev spaces 18
- 2.3 Key properties: density and embedding 21

3 Traces and Poincaré inequalities 27
- 3.1 Lipschitz sets and domains 27
- 3.2 Traces as functions at the boundary 30
- 3.3 Poincaré–Steklov inequalities 34

4 Distributions and duality in Sobolev spaces 39
- 4.1 Distributions 39
- 4.2 Negative-order Sobolev spaces 41
- 4.3 Normal and tangential traces 43

Part II. Introduction to finite elements

5 Main ideas and definitions 49
- 5.1 Introductory example 49
- 5.2 Finite element as a triple 50
- 5.3 Interpolation: finite element as a quadruple 52

5.4 Basic examples ... 53
5.5 The Lebesgue constant ... 55

6 One-dimensional finite elements and tensorization ... 59
6.1 Legendre and Jacobi polynomials ... 59
6.2 One-dimensional Gauss quadrature ... 61
6.3 One-dimensional finite elements ... 64
6.4 Multidimensional tensor-product elements ... 69

7 Simplicial finite elements ... 75
7.1 *Simplices* ... 75
7.2 Barycentric coordinates, geometric mappings ... 76
7.3 The polynomial space $\mathbb{P}_{k,d}$ ... 78
7.4 Lagrange (nodal) finite elements ... 78
7.5 Crouzeix–Raviart finite element ... 82
7.6 Canonical hybrid finite element ... 83

Part III. Finite element interpolation

8 Meshes ... 89
8.1 The geometric mapping ... 89
8.2 Main definitions related to meshes ... 91
8.3 Data structure ... 95
8.4 Mesh generation ... 97

9 Finite element generation ... 101
9.1 Main ideas ... 101
9.2 Differential calculus and geometry ... 104

10 Mesh orientation ... 111
10.1 How to orient a mesh ... 111
10.2 Generation-compatible orientation ... 113
10.3 Increasing vertex-index enumeration ... 115
10.4 *Simplicial meshes* ... 116
10.5 Quadrangular and hexahedral meshes ... 118

11 Local interpolation on affine meshes ... 123
11.1 Shape-regularity for affine meshes ... 123
11.2 Transformation of Sobolev seminorms ... 126
11.3 Bramble–Hilbert lemmas ... 127
11.4 Local finite element interpolation ... 129
11.5 Some examples ... 132

12 Local inverse and functional inequalities 137
12.1 Inverse inequalities in cells 137
12.2 Inverse inequalities on faces 140
12.3 Functional inequalities in meshes 142

13 Local interpolation on nonaffine meshes 147
13.1 Introductory example on curved simplices 147
13.2 A perturbation theory 148
13.3 Interpolation error on nonaffine meshes 151
13.4 Curved simplices 155
13.5 $\mathbb{Q}_1$-quadrangles 156
13.6 $\mathbb{Q}_2$-curved quadrangles 158

14 $\boldsymbol{H}$(div) finite elements 161
14.1 The lowest-order case 161
14.2 The polynomial space $\mathbb{RT}_{k,d}$ 163
14.3 Simplicial Raviart–Thomas elements 164
14.4 Generation of Raviart–Thomas elements 167
14.5 Other $\boldsymbol{H}$(div) finite elements 169

15 $\boldsymbol{H}$(curl) finite elements 173
15.1 The lowest-order case 173
15.2 The polynomial space $\mathbb{N}_{k,d}$ 176
15.3 Simplicial Nédélec elements 177
15.4 Generation of Nédélec elements 182
15.5 Other $\boldsymbol{H}$(curl) finite elements 184

16 Local interpolation in $\boldsymbol{H}$(div) and $\boldsymbol{H}$(curl) (I) 187
16.1 Local interpolation in $\boldsymbol{H}$(div) 187
16.2 Local interpolation in $\boldsymbol{H}$(curl) 191
16.3 The de Rham complex 196

17 Local interpolation in $\boldsymbol{H}$(div) and $\boldsymbol{H}$(curl) (II) 199
17.1 Face-to-cell lifting operator 199
17.2 Local interpolation in $\boldsymbol{H}$(div) using liftings 202
17.3 Local interpolation in $\boldsymbol{H}$(curl) using liftings 206

Part IV. Finite element spaces

18 From broken to conforming spaces 215
18.1 Broken spaces and jumps 215
18.2 Conforming finite element subspaces 218
18.3 L^1-stable local interpolation 222
18.4 Broken L^2-orthogonal projection 225

19 Main properties of the conforming subspaces 229
19.1 Global shape functions and dofs 229
19.2 Examples 232
19.3 Global interpolation operators 235
19.4 Subspaces with zero boundary trace 239

20 Face gluing 243
20.1 The two gluing assumptions (Lagrange) 243
20.2 Verification of the assumptions (Lagrange) 245
20.3 Generalization of the two gluing assumptions 249
20.4 Verification of the two gluing assumptions 251

21 Construction of the connectivity classes 257
21.1 Connectivity classes 257
21.2 Verification of the assumptions 264
21.3 Practical construction 265

22 Quasi-interpolation and best approximation 273
22.1 Discrete setting 273
22.2 Averaging operator 275
22.3 Quasi-interpolation operator 277
22.4 Quasi-interpolation with zero trace 280
22.5 Conforming L^2-orthogonal projections 283

23 Commuting quasi-interpolation 287
23.1 Smoothing by mollification 287
23.2 Mesh-dependent mollification 290
23.3 L^1-stable commuting projection 292
23.4 Mollification with extension by zero 298

Appendices

A Banach and Hilbert spaces 303
A.1 Banach spaces 303
A.2 Bounded linear maps and duality 304
A.3 Hilbert spaces 305
A.4 Compact operators 306
A.5 Interpolation between Banach spaces 307

B Differential calculus 309
B.1 Fréchet derivative 309
B.2 Vector and matrix representation 310
