<i>Preface: The Patchwork Quilt of Intrinsic Disorder</i>	<i>xiii</i>
<b>1. Intrinsic disorder and phase transitions: Pieces in the puzzling role of the prion protein in health and disease</b>	<b>1</b>
Mariana J. do Amaral and Yraima Cordeiro	
1. Introduction	2
2. Considerations on intrinsic disorder and phase separation ability of the prion protein family	8
3. The manifold interactions of PrP with nucleic acid targets: Can phase separation explain it?	14
4. Phase transitions of PrP in health and disease	24
Acknowledgments	32
References	32
<b>2. Functions of intrinsically disordered proteins through evolutionary lenses</b>	<b>45</b>
Mátyás Pajkos and Zsuzsanna Dosztányi	
1. Introduction	46
2. Functional categories of IDPs	47
3. Distinct evolutionary scenarios of IDRs	55
4. Evolutionary conservation of SLIMs	63
5. Evolutionary origin IDRs mutated in cancer	66
6. Conclusion	68
References	69
<b>3. Non-specific porins of Gram-negative bacteria as proteins containing intrinsically disordered regions with amyloidogenic potential</b>	<b>75</b>
Olga D. Novikova, Vladimir N. Uversky, and Elena A. Zelepuga	
Funding	96
Acknowledgment	96
References	96

---

<b>4. Intrinsic disorder in integral membrane proteins</b>	<b>101</b>
Brian J. Aneskievich, Rambon Shamilov, and Olga Vinogradova	
1. Distinction between intrinsically disordered and structured proteins	102
2. Intrinsic disorder in IMPs: Potential functional advantages	106
3. Mutations in IMP: Consideration of IDR	118
4. IMP intrinsic disorder: Investigational approaches	122
5. Conclusions	127
References	128
<b>5. Molecular simulations of IDPs: From ensemble generation to IDP interactions leading to disorder-to-order transitions</b>	<b>135</b>
Hebah Fatafta, Suman Samantray, Abdallah Sayyed-Ahmad, Orkid Coskuner-Weber, and Birgit Strodel	
1. Introduction to IDPs	136
2. Force fields for IDPs	149
3. Simulation-based IDP ensemble generation and characterization	157
4. Modeling the disorder-to-order transition of IDPs	166
5. Summary and outlook	173
Acknowledgments	174
References	174
<b>6. Target-binding behavior of IDPs via pre-structured motifs</b>	<b>187</b>
Do-Hyoung Kim and Kyou-Hoon Han	
1. Introduction	189
2. Target-binding of IDPs	190
3. The pre-structured motif (PreSMo)	196
4. PreSMos in transcriptional and translational factors	206
5. PreSMos in neurodegenerative IDPs	222
6. PreSMos in other IDPs	228
7. Summary and perspective	233
Acknowledgments	235
References	235
<b>7. The role of dancing duplexes in biology and disease</b>	<b>249</b>
Heather M. Forsythe and Elisar Barbar	
1. Introduction	250
2. LCB-facilitated dimerization in IDP duplexes	250
3. Multivalent binding of LCB along IDP duplexes	255

---

4. Nup159: A multivalent LC8 binder with a self-association domain	260
5. VSV-P: The role of disorder in a non-LC8 binding IDP duplex	261
6. The role of disorder and dimerization of the SARS-CoV-2 nucleocapsid phosphoprotein IDP duplex	262
7. Future directions	265
8. Conclusion	267
Acknowledgments	267
References	267
<b>8. Intrinsic disorder in protein kinase A anchoring proteins signaling complexes</b>	<b>271</b>
Mateusz Dyla and Magnus Kjaergaard	
1. Tethered phosphorylation	273
2. Intrinsic disorder in PKA-AKAP signaling complexes	275
3. The prevalence of intrinsic disorder in AKAPs	277
4. Modeling the reach and effective concentration of PKA-AKAP signaling complexes	284
5. Allosteric regulation of tethered reactions by AKAP structure	288
6. Conclusions	291
References	291
<b>9. Protein intrinsic disorder on a dynamic nucleosomal landscape</b>	<b>295</b>
Sveinn Bjarnason, Sarah F. Ruidiaz, Jordan McIvor, Davide Mercadante, and Pétur O. Heidarsson	
1. Introduction	296
2. Protein intrinsic disorder on a nucleosomal landscape	297
3. Disordered interactions with nucleosomes	307
4. Common sequence features of disordered nucleosome-binding proteins	336
5. Concluding remarks	339
Acknowledgments	340
References	340
<b>10. Flexible spandrels of the global plant virome: Proteomic-wide evolutionary patterns of structural intrinsic protein disorder elucidate modulation at the functional virus–host interplay</b>	<b>355</b>
Rachid Tahzima, Annelies Haegeman, Sébastien Massart, and Eugénie Hébrard	
1. The highly modular plant virus proteome	357
2. Protein disorder composition in plant viruses: <i>Terra incognita</i>	363

---

3. The global plant virus proteome reveals overhauling IDP abundance and variability	366
4. General affinity of phylogenomically unrelated small plant virus proteomes with increased IDP	370
5. Emerging patterns in amino acid composition as a potential predictor of IDP and virus functional biology	371
6. The global plant virus MoRFome: Gaining functional insights in viral IDP-mediated binding contextual landscape via harnessing interface molecular recognition features	378
7. Evolutionary proteomic comparative analysis of conserved viral modules make up reveals IDP landscape of viral–host interacting disordomes	381
8. Functional IDP and evolutionary conserved structures expand evidence for modulation of transmission mode of plant viruses by insect vectors	386
9. Outlook and new challenging prospects for plant virology	390
10. Conclusion	400
References	400
Further reading	408
