

Taishi Matsushita · Kusuhiro Mukai

# Chemical Thermodynamics in Materials Science

From Basics to Practical Applications

 Springer

# Contents

<b>1</b>	<b>Introduction</b> . . . . .	<b>1</b>
<b>2</b>	<b>Symbols and Glossary</b> . . . . .	<b>5</b>
2.1	Symbols . . . . .	5
2.2	Glossary . . . . .	8
2.3	Equilibrium State . . . . .	13
	References . . . . .	16
<b>3</b>	<b>The First Law of Thermodynamics</b> . . . . .	<b>17</b>
3.1	The First Law of Thermodynamics . . . . .	17
3.2	Internal Energy, $U$ . . . . .	17
3.3	The Nature of Internal Energy . . . . .	21
3.4	Summary . . . . .	22
	Reference . . . . .	22
<b>4</b>	<b>Enthalpy, <math>H</math></b> . . . . .	<b>23</b>
4.1	Enthalpy, $H$ , and Heat Capacities . . . . .	23
4.2	Definition of Enthalpy, $H = 0$ . . . . .	26
4.3	Heat of Reaction, $\Delta_r H$ . . . . .	26
4.4	Influence of Temperature on the Heat of Reaction (Kirchhoff's Law) . . . . .	27
4.5	Temperature Dependence of Enthalpy, $H$ . . . . .	28
4.6	Enthalpy of Formation (Heat of Formation) . . . . .	30
4.7	Hess's Law . . . . .	33
4.8	Summary . . . . .	34
<b>5</b>	<b>The Second Law of Thermodynamics</b> . . . . .	<b>37</b>
5.1	Expressing the Second Law of Thermodynamics . . . . .	37
5.2	Reversible and Irreversible Processes . . . . .	40

5.3	Carnot Engine (Carnot Cycle) . . . . .	41
5.4	Mathematical Expression of the Second Law of Thermodynamics as Regards Entropy . . . . .	48
5.5	Summary . . . . .	52
<b>6</b>	<b>Entropy, <math>S</math></b> . . . . .	<b>53</b>
6.1	The Microscopic Perspective on Entropy . . . . .	53
6.2	Calculation of Entropy . . . . .	55
6.2.1	Entropy Change During the Isothermal Expansion of Gas . . . . .	55
6.2.2	Temperature Dependence of Entropy, $S$ . . . . .	56
6.3	Macroscopic and Microscopic Perspectives on Entropy . . . . .	58
6.3.1	Macroscopic Perspective . . . . .	58
6.3.2	Microscopic Perspective . . . . .	60
6.4	Summary . . . . .	62
<b>7</b>	<b>Equilibrium Conditions</b> . . . . .	<b>63</b>
7.1	Closed Systems . . . . .	63
7.1.1	General Conditions for Equilibrium for Closed Systems . . . . .	63
7.1.2	Criterion for Equilibrium for a Closed System at Constant $U$ and $V$ ( $dU = 0, dV = 0$ ) . . . . .	65
7.1.3	Criterion for Equilibrium for a Closed System at Constant $S$ and $V$ ( $dS = 0, dV = 0$ ) . . . . .	65
7.1.4	Criterion for Equilibrium for a Closed System at Constant $T$ and $V$ ( $dT = 0, dV = 0$ ) . . . . .	65
7.1.5	Criterion for Equilibrium for a Closed System at Constant $T$ and $P$ ( $dT = 0, dP = 0$ ) . . . . .	66
7.1.6	Basic Equations that Are True for a Closed System in Equilibrium . . . . .	68
7.2	Open Systems . . . . .	71
7.2.1	Basic Equations for Homogeneous Open Systems and Chemical Potential . . . . .	71
7.2.2	The Gibbs-Duhem Equation . . . . .	73
7.3	Isolated and Heterogeneous Systems . . . . .	74
7.3.1	Criterion for Equilibrium for an Isolated Heterogeneous System . . . . .	74
7.3.2	The Influence of Temperature and Pressure on Melting Phenomena (The Clausius-Clapeyron Equation) . . . . .	79
7.3.3	The Influence of Temperature and Pressure on the Conditions for Diamond Synthesis . . . . .	82

7.4	Chemical Equilibrium . . . . .	86
7.5	The Phase Rule . . . . .	89
	7.5.1 Systems in Which no Chemical Reaction Occurs . . . . .	89
	7.5.2 Systems in Which Chemical Reactions Occur . . . . .	91
7.6	Summary . . . . .	99
	References . . . . .	101
<b>8</b>	<b>Chemical Potential and Activity . . . . .</b>	<b>103</b>
8.1	Chemical Potential and the Concentration of an Ideal Mixture . . . . .	103
	8.1.1 Ideal Gases . . . . .	104
	8.1.2 Ideal Solutions . . . . .	107
8.2	Chemical Potential and Concentration of a Non-ideal Mixture . . . . .	112
	8.2.1 Non-ideal Gases and Fugacity . . . . .	112
	8.2.2 Non-ideal Solutions and Activity . . . . .	116
	8.2.3 Choice of Standard Conditions and Unit of Concentration . . . . .	117
8.3	Determining Activity—Measurement Methods . . . . .	129
	8.3.1 Electromotive Force Measurement . . . . .	130
	8.3.2 Using an Oxygen Concentration Cell Consisting of Solid Electrolyte . . . . .	131
	8.3.3 Vapour-Pressure Measurement . . . . .	131
	8.3.4 Measurement of Partition Constants . . . . .	133
	8.3.5 Osmotic Pressure Measurement . . . . .	134
	8.3.6 Other Methods . . . . .	136
8.4	Determining Activity—Calculation Methods . . . . .	136
	8.4.1 Calculation of Activity Using Equilibrium Phase Diagrams . . . . .	136
	8.4.2 Calculating Activity Using the Gibbs-Duhem Equation . . . . .	142
	8.4.3 Calculating Activity Using the Heat of Mixing . . . . .	145
	8.4.4 Activity of Multicomponent Solutions . . . . .	147
8.5	Summary . . . . .	151
	8.5.1 Chemical Potential and Fugacity/Activity . . . . .	151
	8.5.2 Activity Measurements . . . . .	152
	8.5.3 Activity Calculation . . . . .	153
	8.5.4 Types of Solution, Heat of Mixing, $\Delta_{\text{mix}}H$ , and Entropy of Mixing, $\Delta_{\text{mix}}S$ . . . . .	155
	Reference . . . . .	155
<b>9</b>	<b>Partial Molar Quantities and Excess Quantities . . . . .</b>	<b>157</b>
9.1	Partial Molar and Integral Quantities . . . . .	157
9.2	Excess Quantities . . . . .	159

9.3	Partial Molar, Integral, and Excess Quantities of Enthalpy and Entropy . . . . .	160
9.4	Calculation of Partial Molar Quantities . . . . .	162
9.5	Summary . . . . .	163
<b>10</b>	<b>Gibbs Energy Change, <math>\Delta G</math>, and Standard Gibbs Energy Change, <math>\Delta G^\circ</math></b> . . . . .	<b>165</b>
10.1	The van't Hoff Isotherm . . . . .	165
10.2	The van't Hoff Isotherm for Different Systems . . . . .	166
10.2.1	Liquid Phases (Reaction in a Solution) . . . . .	167
10.2.2	Gas Phases . . . . .	168
10.2.3	Gas, Solid, and Liquid Phases . . . . .	171
10.2.4	Solid and Liquid Phases . . . . .	179
10.3	Calculating the Standard Gibbs Energy Change, $\Delta G^\circ$ , of Reactions . . . . .	188
10.3.1	Using the Free-Energy Function and Enthalpy . . . . .	188
10.3.2	Using Standard Gibbs Energy of Formation, $\Delta_f G_i^\circ$ . . . . .	191
10.3.3	Using Heat Capacity . . . . .	198
10.4	The Relationship Between Equilibrium Constant, Temperature, and Pressure . . . . .	204
10.4.1	Temperature Dependence of the Equilibrium Constant . . . . .	205
10.4.2	Pressure Dependence of the Equilibrium Constant . . . . .	206
10.5	Ellingham Diagram . . . . .	208
10.5.1	Obtaining the Dissociation Pressure of Oxygen . . . . .	208
10.5.2	Equilibrium Between CO–CO <sub>2</sub> and MeO <sub>2</sub> . . . . .	211
10.5.3	Equilibria Between H <sub>2</sub> –H <sub>2</sub> O and MeO <sub>2</sub> , S <sub>2</sub> and MeS <sub>2</sub> , and H <sub>2</sub> –H <sub>2</sub> S and MeS <sub>2</sub> . . . . .	214
10.6	Summary . . . . .	217
<b>11</b>	<b>Introduction to Computational Thermodynamics</b> . . . . .	<b>219</b>
11.1	Introduction . . . . .	219
11.2	Binary Isomorphous Phase Diagrams . . . . .	220
11.3	Binary Systems—Other Types of Phase Diagram . . . . .	221
11.4	Phase Diagrams of Multicomponent Systems . . . . .	222
11.5	Gibbs Energy of a Regular Solution . . . . .	222
11.6	General Form of Gibbs Energy . . . . .	225
11.7	The Sublattice Model . . . . .	225
11.8	Multicomponent Systems . . . . .	227
11.9	Other Models . . . . .	227
11.10	Summary . . . . .	228
	Reference . . . . .	229

<b>12 Books, Databases, and Software</b> . . . . .	231
12.1 Further Reading (in Roughly Ascending Order of Difficulty) . . . . .	231
12.2 Thermodynamic Data Books . . . . .	232
12.2.1 Data Books . . . . .	232
12.2.2 General Materials/Substances . . . . .	232
12.2.3 Metals and Oxides . . . . .	233
12.3 Thermodynamic Databases and Software . . . . .	233
<b>13 Thermodynamic Data</b> . . . . .	235
13.1 Standard Gibbs Energy of Formation (Data as a Function of Temperature) . . . . .	235
13.2 Interaction Parameters (Data for Normal Steel) . . . . .	245
References . . . . .	257
