

Bahman Zohuri

Hydrogen Energy

Challenges and Solutions for a Cleaner Future

 Springer

Contents

1	The Chemical Element Hydrogen	1
1.1	Introduction	1
1.2	The History of Hydrogen	6
1.3	Summary	9
1.4	Hydrogen Sources	9
1.5	Hydrogen Isotopes	11
1.6	Uses for Hydrogen	14
1.6.1	Zeppelins and Airships	14
1.7	Hydrogen Energy	21
1.7.1	Pros and Cons of Hydrogen Energy	23
1.8	Manufacture of Hydrogen	30
1.9	Why Is This Pathway Being Considered?	35
	References	35
2	Hydrogen-Powered Fuel Cell and Hybrid Automobiles of the Near Future	37
2.1	Introduction	37
2.2	Fuel Cells	39
2.3	Hydrogen Fuel Cell Applications	42
2.4	Near-Future Hydrogen-Driven Cars and Industry Milestones	43
2.5	European Hydrogen and Fuel Cell Projects	45
2.6	Hydrogen Transportation Concepts by Geographic Region	46
2.7	Energy and Global Warming	50
2.8	Hydrogen for the Future	53
2.8.1	A High Price	55
2.8.2	Looking Ahead	55
2.8.3	The Dawn of Hydrogen as the Future of Fuel Cells	57

2.9	Summary	57
	References	57
3	Hydrogen Driving Thermonuclear Fusion Energy	61
3.1	Introduction	61
3.2	Energy Released from Thermonuclear Fusion Reactions	62
3.3	Hydrogen Isotopes	66
3.4	Thermonuclear Fusion Reactions	66
3.5	Rates of Thermonuclear Reactions	75
3.6	Critical Ignition Temperature for the Fusion Reaction	77
3.7	Ideal Ignition Temperature for Controlled Thermonuclear Fusion	79
3.8	Confinement Systems for Controlled Thermonuclear Fusion	82
3.9	Magnetic Confinement Fusion	84
3.9.1	Summary of Guiding Center Drift	105
3.10	How the Tokamak Reactors Works	106
3.11	Inertial Confinement Fusion (ICF)	111
	References	120
4	Cryogenics and Liquid Hydrogen Storage	121
4.1	Introduction	121
4.2	Physics of Cryogenics	124
4.2.1	Low Temperatures in Science and Technology	126
4.2.2	Defining Cryogenic Fluids or Liquids	131
4.2.3	Type of Cryogenic Liquids	132
4.3	Way Forward	136
	References	139
5	Hydrogen: Driving Renewable Energy	141
5.1	Introduction	141
5.2	Hydrogen as an Energy Carrier	142
5.3	Hydrogen Fuel Cells	143
5.4	Fuel Cells	146
5.4.1	Different Types of Fuel Cells	147
5.5	Fuel Cell Technologies	153
5.6	Fuel Cell Backup Power Systems	154
5.7	Fuel Cell Systems for Stationary Combined Heat and Power Applications	155
5.8	Fuel Cell Systems for Portable Power and Auxiliary Power Applications	155
5.9	Hydrogen Storage	156
5.9.1	Why Study Hydrogen Storage?	157
5.9.2	How Hydrogen Storage Works	157
5.9.3	Research and Development Goals	159
5.9.4	Hydrogen Storage Challenges	160

5.10	Hydrogen Energy Storage	162
5.10.1	Hydrogen Production	163
5.10.2	Hydrogen Re-Electrification	164
5.11	Pipelines and Underground Hydrogen Storage	165
5.12	Materials-Based Hydrogen Storage	165
5.12.1	Technical Targets and Status	166
5.13	Industrial Application of Hydrogen Energy	167
5.14	Electrical Energy Storage	170
5.14.1	Characteristics of Electricity	171
5.14.2	Electricity and the Roles of Electrical Energy Storage	171
5.15	Strategic Asset Management of Power Networks	174
5.16	Orchestrating Infrastructure for Sustainable Smart Cities	176
5.16.1	Smart Technology Solutions Create Value	177
5.16.2	New Approaches Needed to Smart City Solution	177
5.16.3	Stakeholders are Key Drivers to Smart City Solution	178
5.16.4	Without Integration Rising to the Level of Systems There Cannot be a Smart City	178
5.16.5	Horizontal and Vertical Integration a Key to Interoperability	179
5.16.6	Interoperability is the Key to Open Markets and to Competitive Solutions	179
5.16.7	Guiding Principles and Strategic Orientation for the International Electrotechnical Commission and Messages to Other Standards Developing Organizations	180
	References	182
6	Nuclear Hydrogen Production Plants	185
6.1	Introduction	185
6.2	Nuclear Hydrogen Production Technology	187
6.3	Considerations Regarding Nuclear Reactor Types and Processes	188
6.4	Hydrogen Production Driven by Nuclear Energy	189
6.5	Constraints Associated with Hydrogen Production Driven by Nuclear Energy	198
6.5.1	Safety: Hydrogen Generation	199
6.5.2	Safety: Hydrogen Generation by Facility Location	200
6.6	Efficient Generation of Hydrogen Fuels Utilizing Nuclear Power	202
6.7	Thermal Characteristics for Coupling a Hydrogen Product Plant to a High-Temperature Reactor/Very High-Temperature Reactor (HTR/VHTR)	207
6.8	Next-Generation Nuclear Plant Intermediate Heat Exchanger Acquisition	217

6.9	Applicability of Heat Exchanger to Process Heat Applications	223
	References	226
7	Large-Scale Hydrogen Production	229
7.1	Introduction	229
7.2	Hydrogen Production by Steam Reforming of Hydrocarbons	232
7.2.1	Steam Reforming Technologies	233
7.2.2	Heat of Combustion	237
7.2.3	Reforming Reactions	238
7.3	Introduction to Combustion	239
7.4	Chemical Combustion	241
7.5	Combustion Equations	242
7.6	Mass and Mole Fractions	245
7.7	Enthalpy of Formation	247
7.8	Enthalpy of Combustion	251
7.9	Adiabatic Flame Temperature	252
	References	254
8	Hydrogen Storage Processes and Technologies	257
8.1	Introduction	257
8.2	Hydrogen Storage Technologies	259
8.3	How Does Hydrogen Storage Work?	261
8.4	Physical Hydrogen Storage	263
8.5	Technical Targets and Status	263
8.5.1	Status and Targets for Gravimetric Density, Volumetric Density, and Cost	264
8.5.2	Performance Against All Department of Energy 2010 Onboard Vehicle Storage Targets	264
8.5.3	Distribution of 350 Bar and 700 Bar Compressed Hydrogen System Costs	264
8.5.4	System Cost Based on Production Volume	266
8.5.5	Pathways to Reduced Cost	266
8.6	Research and Development Goals	267
8.7	Materials-Based Hydrogen Storage	268
8.7.1	Technical Targets and Status	268
8.8	Onboard Hydrogen Storage for Light-Duty Vehicles	269
8.9	Material Handling Equipment	273
8.10	Portable Power Equipment	274
8.11	High-Density Hydrogen Storage Challenges	277
	References	278
	Index	281
