A Perspective on Canonical Riemannian Metrics

 Birkhäuser

Contents

Introduction	xi
1 Basic Concepts of Riemannian Geometry	1
1.1 Moving frames: Levi-Civita connection, structure equations and curvatures	1
1.1.1 Levi-Civita connection, first structure equation and covariant derivatives	1
1.1.2 Second structure equation and the Riemann tensor	6
1.1.3 Ricci, scalar and sectional curvatures	10
1.2 General frame: everything with Christoffel symbols	14
1.2.1 Levi-Civita connection and covariant derivatives revisited .	14
1.2.2 Riemann and Ricci curvatures revisited	15
1.2.3 Covariant derivatives revisited, Hessian and Laplacian . . .	16
1.3 Back to moving frames: the decomposition of the curvature tensor	19
1.4 Other curvatures: A , B , C	22
2 Commutations and Variations	27
2.1 Commutation formulas	27
2.2 Variations of curvatures tensors and other geometric quantities . .	33
2.2.1 General variations	33
2.2.2 Conformal deformations	39
2.2.3 Aubin's deformation	45
3 The Weyl Tensor	51
3.1 General properties	51
3.1.1 Some formulas	51
3.1.2 Some inequalities	53
3.1.3 The Weyl–Schouten and Aubin theorems	57
3.2 The case of dimension four	57
3.2.1 Self-dual and anti-self-dual parts of W	58
3.2.2 The Derdzinski basis	58
3.2.3 Special formulas	59

3.2.4	Integral identities and topology	65
3.2.5	A Kato inequality	67
4	Curvature Conditions	71
4.1	Old and new canonical metrics: algebraic and analytic conditions	71
4.1.1	Ricci solitons	76
4.2	Canonical metrics revisited: equivalent conditions	77
4.3	The rigid classes: \mathcal{SF}_f , \mathcal{LS}_f , \mathcal{LSE}_f and \mathcal{PR}_f	81
4.4	The class \mathcal{HC}_f	83
4.4.1	Rigidity and characterization results	83
4.4.2	Two examples	87
4.5	The class \mathcal{Y}_f : a possible generalization of the Yamabe problem	89
4.5.1	An obstruction	89
4.5.2	An example	91
4.5.3	An existence result in Euclidean space	92
4.6	Non-gradient canonical metrics	102
4.6.1	The class \mathcal{SF}_X	104
4.6.2	The classes \mathcal{LS}_X and \mathcal{LSE}_X	104
4.6.3	The class \mathcal{HC}_X	105
4.6.4	The class \mathcal{Y}_X	107
4.7	Final remarks and open problems	107
5	Critical Metrics of Riemannian Functionals	109
5.1	The Einstein–Hilbert functional	109
5.2	Quadratic curvature functionals	112
5.2.1	A basis	112
5.2.2	Remarks on two special cases	113
5.3	Some rigidity results for quadratic functionals	115
5.3.1	The Euler-Lagrange equations	118
5.3.2	Proofs of Theorem 5.4 and Theorem 5.5	120
5.3.3	Proof of Theorem 5.7	126
5.3.4	Proof of Theorem 5.8	128
5.3.5	The Euler-Lagrange equation for $\mathfrak{F}_{t,s}$	131
6	Bochner-Weitzenböck Formulas and Applications	135
6.1	A general Bochner-Weitzenböck formula	135
6.1.1	General dimension	135
6.1.2	Dimension four and an integral identity	136
6.2	Some applications	137
6.2.1	Harmonic Weyl and Einstein manifolds: the first Bochner-Weitzenböck formula	137
6.2.2	Rigidity results for Einstein manifolds	138
6.2.3	A general result on four-dimensional manifolds	140

6.3	Higher-order Bochner-Weitzenböck formulas on Einstein manifolds	145
6.3.1	Rough formulas	145
6.3.2	The second Bochner-Weitzenböck formula	149
6.3.3	A rigidity result for Einstein manifolds	150
7	Ricci Solitons: Selected Results	159
7.1	Preliminary results	161
7.1.1	Fundamental formulas for Ricci solitons	161
7.1.2	The tensor D and the integrability conditions	165
7.2	Rigidity I: pointwise conditions	167
7.2.1	Compact shrinkers with strictly positive sectional curvature	167
7.2.2	Further results in the non-necessarily gradient case	172
7.3	Rigidity II: integral conditions	174
7.3.1	The compact case: integral pinching conditions	174
7.3.2	The non-compact case: L^1 conditions and integral curvature decay	178
7.4	Rigidity III: vanishing conditions on the Weyl tensor	191
7.4.1	A key integral formula	194
7.4.2	Proof of the results	196
7.5	Rigidity IV: Weyl scalars	200
7.5.1	Weyl scalars on a Ricci soliton	202
7.5.2	Main results	205
7.5.3	Special cases	208
8	Existence Results of Canonical Metrics on Four-Manifolds	213
8.1	A new variational problem: Weak harmonic Weyl metrics	213
8.2	The Euler-Lagrange equation	217
8.2.1	Critical metrics	217
8.2.2	The PDE for the conformal factor	219
8.3	Existence of minimizers	219
8.3.1	Proof of Theorem 8.2	219
8.3.2	Some preliminary results	220
8.3.3	Existence	221
8.3.4	Uniqueness	225
8.3.5	Further results	228
	List of Symbols	231
	Bibliography	233
	Index	243
