

Contents

1	Prologue: 3000 Years of Analysis	1
1.1	What is ‘Analysis’?	3
1.2	Precursors of π	4
1.3	The π of the Bible	8
1.4	Volume of a Frustum of a Pyramid	10
1.5	Babylonian Approximation of $\sqrt{2}$	14
2	The Continuum in Greek-Hellenistic Antiquity	17
2.1	The Greeks Shape Mathematics	20
2.1.1	The Very Beginning: Thales of Miletus and his Pupils	21
2.1.2	The Pythagoreans	24
2.1.3	The Proportion Theory of Eudoxus in Euclid’s Elements	30
2.1.4	The Method of Exhaustion – Integration in the Greek Fashion	36
2.1.5	The Problem of Horn Angles	40
2.1.6	The Three Classical Problems of Antiquity	41
2.2	Continuum versus Atoms – Infinitesimals versus Indivisibles	50
2.2.1	The Eleatics	50
2.2.2	Atomism and the Theory of the Continuum	51
2.2.3	Indivisibles and Infinitesimals	54
2.2.4	The Paradoxes of Zeno	57
2.3	Archimedes	61
2.3.1	Life, Death, and Anecdotes	61
2.3.2	The Fate of Archimedes’s Writings	69
2.3.3	The Method: Access with Regard to Mechanical Theorems	73
2.3.4	The Quadrature of the Parabola by means of Exhaustion	78
2.3.5	On Spirals	82
2.3.6	Archimedes traps π	86
2.4	The Contributions of the Romans	88

3	How Knowledge Migrates – From Orient to Occident	91
3.1	The Decline of Mathematics and the Rescue by the Arabs . . .	92
3.2	The Contributions of the Arabs Concerning Analysis	98
3.2.1	Avicenna (Ibn Sīnā): Polymath in the Orient	98
3.2.2	Alhazen (Ibn al-Haytham): Physicist and Mathematician	99
3.2.3	Averroes (Ibn Rushd): Islamic Aristotelian	105
4	Continuum and Atomism in Scholasticism	109
4.1	The Restart in Europe	111
4.2	The Great Time of the Translators	120
4.3	The Continuum in Scholasticism	127
4.3.1	Robert Grosseteste	129
4.3.2	Roger Bacon	131
4.3.3	Albertus Magnus	133
4.3.4	Thomas Bradwardine	135
4.3.5	Nicole Oresme	141
4.4	Scholastic Dissenters	147
4.5	Nicholas of Cusa	149
4.5.1	The Mathematical Works	152
5	Indivisibles and Infinitesimals in the Renaissance	155
5.1	Renaissance: Rebirth of Antiquity	157
5.2	The Calculators of Barycentres	160
5.3	Johannes Kepler	169
5.3.1	New Stereometry of Wine Barrels	191
5.4	Galileo Galilei	196
5.4.1	Galileo’s Treatment of the Infinite	203
5.5	Cavalieri, Guldin, Torricelli, and the High Art of Indivisibles .	208
5.5.1	Cavalieri’s Method of Indivisibles	212
5.5.2	The Criticism of Guldin	220
5.5.3	The Criticism of Galilei	221
5.5.4	Torricelli’s Apparent Paradox	222
5.5.5	De Saint-Vincent and the Area under the Hyperbola . .	224

6	At the Turn from the 16th to the 17th Century	233
6.1	Analysis in France before Leibniz	235
6.1.1	France at the turn of the 16th to the 17th Century ...	235
6.1.2	René Descartes	238
6.1.3	Pierre de Fermat	248
6.1.4	Blaise Pascal	258
6.1.5	Gilles Personne de Roberval	270
6.2	Analysis Prior to Leibniz in the Netherlands	275
6.2.1	Frans van Schooten	276
6.2.2	René François Walther de Sluse	277
6.2.3	Johannes van Waveren Hudde	279
6.2.4	Christiaan Huygens	282
6.3	Analysis Before Newton in England	284
6.3.1	The Discovery of Logarithms	284
6.3.2	England at the Turn from the 16th to the 17th Century	285
6.3.3	John Napier and His Logarithms	288
6.3.4	Henry Briggs and His Logarithms	295
6.3.5	England in the 17th Century	307
6.3.6	John Wallis and the Arithmetic of the Infinite	310
6.3.7	Isaac Barrow and the Love of Geometry	318
6.3.8	The Discovery of the Series of the Logarithms by Nicholas Mercator	325
6.3.9	The First Rectifications: Harriot and Neile	330
6.3.10	James Gregory	338
6.4	Analysis in India	339
7	Newton and Leibniz – Giants and Opponents	345
7.1	Isaac Newton	347
7.1.1	Childhood and Youth	347
7.1.2	Student in Cambridge	350
7.1.3	The Lucasian Professor	357
7.1.4	Alchemy, Religion, and the Great Crisis	362
7.1.5	Newton as President of the Royal Society	366
7.1.6	The Binomial Theorem	369
7.1.7	The Calculus of Fluxions	370

7.1.8	The Fundamental Theorem	373
7.1.9	Chain Rule and Substitutions	375
7.1.10	Computation with Series	375
7.1.11	Integration by Substitution	377
7.1.12	Newtons Last Works Concerning Analysis	378
7.1.13	Newton and Differential Equations	379
7.2	Gottfried Wilhelm Leibniz	380
7.2.1	Childhood, Youth, and Studies	380
7.2.2	Leibniz in the Service of the Elector of Mainz	383
7.2.3	Leibniz in Hanover	387
7.2.4	The Priority Dispute	392
7.2.5	First Achievements with Difference Sequences	398
7.2.6	Leibniz's Notation	400
7.2.7	The Characteristic Triangle	404
7.2.8	The Infinitely Small Quantities	406
7.2.9	The Transmutation Theorem	412
7.2.10	The Principle of Continuity	416
7.2.11	Differential Equations with Leibniz	418
7.3	First Critical Voice: George Berkeley	419
8	Absolutism, Enlightenment, Departure to New Shores	423
8.1	Historical Introduction	425
8.2	Jacob and John Bernoulli	433
8.2.1	The Calculus of Variations	438
8.3	Leonhard Euler	443
8.3.1	Euler's Notion of Function	454
8.3.2	The Infinitely Small in Euler's View	457
8.3.3	The Trigonometric Functions	460
8.4	Brook Taylor	461
8.4.1	The Taylor Series	463
8.4.2	Remarks Concerning the Calculus of Differences	465
8.5	Colin Maclaurin	466
8.6	The Beginnings of the Algebraic Interpretation	466
8.6.1	Lagrange's Algebraic Analysis	467
8.7	Fourier Series and Multidimensional Analysis	469

8.7.1	Jean Baptiste Joseph Fourier	469
8.7.2	Early Discussions of the Wave Equation	472
8.7.3	Partial Differential Equations and Multidimensional Analysis	473
8.7.4	A Preview: The Importance of Fourier Series for Analysis	473
9	On the Way to Conceptual Rigour in the 19th Century ...	479
9.1	From the Congress of Vienna to the German Empire	483
9.2	Lines of Developments of Analysis in the 19th Century	490
9.3	Bernhard Bolzano and the Pradoxes of the Infinite	491
9.3.1	Bolzano's Contributions to Analysis	493
9.4	The Arithmetisation of Analysis: Cauchy	497
9.4.1	Limit and Continuity	502
9.4.2	The Convergence of Sequences and Series	503
9.4.3	Derivative and Integral	506
9.5	The Development of the Notion of Integral	507
9.6	The Final Arithmetisation of Analysis: Weierstraß	515
9.6.1	The Real Numbers	518
9.6.2	Continuity, Differentiability, and Convergence	518
9.6.3	Uniformity	521
9.7	Richard Dedekind and his Companions	523
9.7.1	The Dedekind Cuts	531
10	At the Turn to the 20th Century: Set Theory and the Search for the True Continuum	537
10.1	From the Establishment of the German Empire to the Global Catastrophes	540
10.2	Saint George Hunts Down the Dragon: Cantor and Set Theory	545
10.2.1	Cantor's Construction of the Real Numbers	555
10.2.2	Cantor and Dedekind	556
10.2.3	The Transfinite Numbers	565
10.2.4	The Reception of Set Theory	569
10.2.5	Cantor and the Infinitely Small	570
10.3	Searching for the True Continuum: Paul Du Bois-Reymond	571
10.4	Searching for the True Continuum: The Intuitionists	573

10.5	Vector Analysis	578
10.6	Differential Geometry	582
10.7	Ordinary Differential Equations	584
10.8	Partial Differential Equations	586
10.9	Analysis Becomes Even More Powerful: Functional Analysis .	588
10.9.1	Basic Notions of Functional Analysis	589
10.9.2	A Historical Outline of Functional Analysis	592
11	Coming to full circle: Infinitesimals in Nonstandard	
	Analysis	601
11.1	From the Cold War up to today	605
11.1.1	Computer and Sputnik Shock	607
11.1.2	The Cold War and its End	609
11.1.3	Bologna Reform, Crises, Terrorism.....	611
11.2	The Rebirth of the Infinitely Small Numbers	612
11.2.1	Mathematics of Infinitesimals in the ‘Black Book’	613
11.2.2	The Nonstandard Analysis of Laugwitz and Schmieden	616
11.3	Robinson and the Nonstandard Analysis.....	619
11.4	Nonstandard Analysis by Axiomatisation: The Nelson	
	Approach.....	621
11.5	Nonstandard Analysis and Smooth Worlds.....	621
12	Analysis at Every Turn	629
	References	641
	List of Figures	661
	Index of persons	679
	Subject index	691
