

# **Linear and Convex Optimization**

A Mathematical Approach

*Michael H. Veatch*

Gordon College

**WILEY**

## Contents

**Preface** *xi*

**About the Companion Website** *xvii*

**1 Introduction to Optimization Modeling** *1*

- 1.1 Who Uses Optimization? *1*
- 1.2 Sending Aid to a Disaster *3*
- 1.3 Optimization Terminology *9*
- 1.4 Classes of Mathematical Programs *11*  
Problems *16*

**2 Linear Programming Models** *19*

- 2.1 Resource Allocation *19*
- 2.2 Purchasing and Blending *23*
- 2.3 Workforce Scheduling *29*
- 2.4 Multiperiod Problems *30*
- 2.5 Modeling Constraints *34*
- 2.6 Network Flow *36*  
Problems *44*

**3 Linear Programming Formulations** *55*

- 3.1 Changing Form *55*
- 3.2 Linearization of Piecewise Linear Functions *57*
- 3.3 Dynamic Programming *62*  
Problems *66*

**4 Integer Programming Models** *71*

- 4.1 Quantitative Variables and Fixed Costs *72*
- 4.2 Set Covering *74*
- 4.3 Logical Constraints and Piecewise Linear Functions *77*

4.4	Additional Applications	81
4.5	Traveling Salesperson and Cutting Stock Problems	86
	Problems	90
<b>5</b>	<b>Iterative Search Algorithms</b>	<b>99</b>
5.1	Iterative Search and Constructive Algorithms	100
5.2	Improving Directions and Optimality	106
5.3	Computational Complexity and Correctness	112
	Problems	116
<b>6</b>	<b>Convexity</b>	<b>121</b>
6.1	Convex Sets	122
6.2	Convex and Concave Functions	127
	Problems	131
<b>7</b>	<b>Geometry and Algebra of LPs</b>	<b>133</b>
7.1	Extreme Points and Basic Feasible Solutions	134
7.2	Optimality of Extreme Points	137
7.3	Linear Programs in Canonical Form	140
7.4	Optimality Conditions	145
7.5	Optimality for General Polyhedra	146
	Problems	149
<b>8</b>	<b>Duality Theory</b>	<b>153</b>
8.1	Dual of a Linear Program	153
8.2	Duality Theorems	158
8.3	Complementary Slackness	162
8.4	Lagrangian Duality	164
8.5	Farkas' Lemma and Optimality	167
	Problems	170
<b>9</b>	<b>Simplex Method</b>	<b>173</b>
9.1	Simplex Method From a Known Feasible Solution	174
9.2	Degeneracy and Correctness	183
9.3	Finding an Initial Feasible Solution	186
9.4	Computational Strategies and Speed	192
	Problems	200
<b>10</b>	<b>Sensitivity Analysis</b>	<b>203</b>
10.1	Graphical Sensitivity Analysis	204
10.2	Shadow Prices and Reduced Costs	208

10.3	Economic Interpretation of the Dual	219
	Problems	221
<b>11</b>	<b>Algorithmic Applications of Duality</b>	<b>225</b>
11.1	Dual Simplex Method	226
11.2	Network Simplex Method	234
11.3	Primal-Dual Interior Point Method	246
	Problems	256
<b>12</b>	<b>Integer Programming Theory</b>	<b>261</b>
12.1	Linear Programming Relaxations	262
12.2	Strong Formulations	263
12.3	Unimodular Matrices	269
	Problems	272
<b>13</b>	<b>Integer Programming Algorithms</b>	<b>275</b>
13.1	Branch and Bound Methods	275
13.2	Cutting Plane Methods	284
	Problems	293
<b>14</b>	<b>Convex Programming: Optimality Conditions</b>	<b>297</b>
14.1	KKT Optimality Conditions	297
14.2	Lagrangian Duality	306
	Problems	312
<b>15</b>	<b>Convex Programming: Algorithms</b>	<b>317</b>
15.1	Convex Optimization Models	320
15.2	Separable Programs	323
15.3	Unconstrained Optimization	325
15.4	Quadratic Programming	329
15.5	Primal-dual Interior Point Method	331
	Problems	339
<b>A</b>	<b>Linear Algebra and Calculus Review</b>	<b>343</b>
A.1	Sets and Other Notation	343
A.2	Matrix and Vector Notation	343
A.3	Matrix Operations	345
A.4	Matrix Inverses	347
A.5	Systems of Linear Equations	348
A.6	Linear Independence and Rank	350

A.7 Quadratic Forms and Eigenvalues 351

A.8 Derivatives and Convexity 352

**Bibliography** 355

**Index** 361
