

Jane Hawkins

Ergodic Dynamics

From Basic Theory to Applications

 Springer

Contents

| | | |
|----------|------------------------------------------------------------------------|----|
| 1 | The Simplest Examples | 1 |
| 1.1 | Symbol Spaces and Bernoulli Shifts | 5 |
| 2 | Dynamical Properties of Measurable Transformations | 9 |
| 2.1 | The Basic Definitions | 9 |
| 2.2 | Recurrent, Conservative, and Dissipative Systems | 16 |
| 2.2.1 | Ergodicity | 18 |
| 2.2.2 | Kac's Lemma | 19 |
| 2.2.3 | Conservativity and Hopf Decomposition | 21 |
| 2.3 | Noninvertible Maps and Exactness | 23 |
| 3 | Attractors in Dynamical Systems | 27 |
| 3.1 | Attractors | 27 |
| 3.2 | Examples of Attractors | 30 |
| 3.3 | Sensitive Dependence, Chaotic Dynamics, and Turbulence | 33 |
| 3.3.1 | Unimodal Interval Maps | 36 |
| 4 | Ergodic Theorems | 41 |
| 4.1 | The Koopman Operator for a Dynamical System | 41 |
| 4.2 | Von Neumann Ergodic Theorems | 43 |
| 4.3 | Birkhoff Ergodic Theorem | 47 |
| 4.4 | Spectrum of an Ergodic Dynamical System | 51 |
| 4.5 | Unique Ergodicity | 53 |
| 4.5.1 | The Topology of Probability Measures on Compact Metric Spaces | 54 |
| 4.6 | Normal Numbers and Benford's Law | 58 |
| 4.6.1 | Normal Numbers | 59 |
| 4.6.2 | Benford's Law | 60 |
| 4.6.3 | Detecting Financial Fraud Using Benford's Law | 62 |

| | | |
|-----------|----------------------------------------------------------------------------|-----|
| 5 | Mixing Properties of Dynamical Systems | 65 |
| 5.1 | Weak Mixing and Mixing | 67 |
| 5.2 | Noninvertibility | 76 |
| 5.2.1 | Partitions | 77 |
| 5.2.2 | Rohlin Partitions and Factors | 79 |
| 5.3 | The Parry Jacobian and Radon–Nikodym Derivatives | 81 |
| 5.4 | Examples of Noninvertible Maps | 84 |
| 5.5 | Exact Endomorphisms | 85 |
| 6 | Shift Spaces | 89 |
| 6.1 | Full Shift Spaces and Bernoulli Shifts | 89 |
| 6.2 | Markov shifts | 95 |
| 6.2.1 | Subshifts of Finite Type | 98 |
| 6.3 | Markov Shifts in Higher Dimensions | 99 |
| 6.4 | Noninvertible Shifts | 102 |
| 6.4.1 | Index Function | 102 |
| 7 | Perron–Frobenius Theorem and Some Applications | 107 |
| 7.1 | Preliminary Background | 108 |
| 7.2 | Spectrum and the Perron–Frobenius Theorem | 111 |
| 7.2.1 | Application to Markov Shift Dynamics | 114 |
| 7.3 | An Application to Google’s PageRank | 116 |
| 7.4 | An Application to Virus Dynamics | 118 |
| 7.4.1 | States of the Markov Process | 118 |
| 8 | Invariant Measures | 125 |
| 8.1 | Measures for Continuous Maps | 125 |
| 8.2 | Induced Transformations | 131 |
| 8.3 | Existence of Absolutely Continuous Invariant Probability Measures | 135 |
| 8.3.1 | Weakly Wandering Sets for Invertible Maps | 139 |
| 8.3.2 | Proof of the Hajian–Kakutani Weakly Wandering Theorem | 142 |
| 8.4 | Halmos–Hopf–von Neumann Classification | 144 |
| 9 | No Equivalent Invariant Measures: Type III Maps | 151 |
| 9.1 | Ratio Sets | 152 |
| 9.2 | Odometers of Type II and Type III | 157 |
| 9.2.1 | Krieger Flows | 161 |
| 9.2.2 | Type III ₀ Dynamical Systems | 163 |
| 9.3 | Other Examples | 164 |
| 9.3.1 | Noninvertible Maps | 165 |
| 10 | Dynamics of Automorphisms of the Torus and Other Groups | 167 |
| 10.1 | An Illustrative Example | 167 |
| 10.2 | Dynamical and Ergodic Properties of Toral Automorphisms | 171 |

| | | |
|-----------|------------------------------------------------------------------------------|------------|
| 10.3 | Group Endomorphisms and Automorphisms on \mathbb{T}^n | 173 |
| 10.3.1 | Ergodicity and Mixing of Toral Endomorphisms | 177 |
| 10.4 | Compact Abelian Group Rotation Dynamics | 180 |
| 11 | An Introduction to Entropy | 185 |
| 11.1 | Topological Entropy | 188 |
| 11.1.1 | Defining and Calculating Topological Entropy | 188 |
| 11.1.2 | Hyperbolic Toral Endomorphisms | 192 |
| 11.1.3 | Topological Entropy of Subshifts | 194 |
| 11.2 | Measure Theoretic Entropy | 196 |
| 11.2.1 | Preliminaries for Measure Theoretic Entropy | 196 |
| 11.2.2 | The Definition of $h_\mu(f)$ | 197 |
| 11.2.3 | Computing $h_\mu(f)$ | 199 |
| 11.2.4 | An Information Theory Derivation of $H(P)$ | 203 |
| 11.3 | Variational Principle | 204 |
| 11.4 | An Application of Entropy to the Papillomavirus Genome | 205 |
| 11.4.1 | Algorithm | 206 |
| 12 | Complex Dynamics | 209 |
| 12.1 | Background and Notation | 211 |
| 12.1.1 | Some Dynamical Properties of Iterated Functions | 214 |
| 12.2 | Möbius Transformations and Conformal Conjugacy | 216 |
| 12.2.1 | The Dynamics of Möbius Transformations | 216 |
| 12.3 | Julia Sets | 217 |
| 12.3.1 | First Properties of $J(R)$ | 220 |
| 12.3.2 | Exceptional and Completely Invariant Sets | 222 |
| 12.3.3 | Dynamics on Julia Sets | 223 |
| 12.3.4 | Classification of the Fatou Cycles | 226 |
| 12.4 | Ergodic Properties of Some Rational Maps | 228 |
| 12.4.1 | Ergodicity of Non-Critical Postcritically Finite Maps | 233 |
| 13 | Maximal Entropy Measures on Julia Sets and a Computer Algorithm | 237 |
| 13.1 | The Random Inverse Iteration Algorithm | 238 |
| 13.2 | Statement of the Results | 239 |
| 13.3 | Markov Processes for Rational Maps | 243 |
| 13.3.1 | Proof of Theorem 13.2 | 245 |
| 13.4 | Proof That the Algorithm Works | 246 |
| 13.5 | Ergodic Properties of the Mañé–Lyubich Measure | 247 |
| 13.6 | Fine Structure of the Mañé–Lyubich Measure | 248 |
| 14 | Cellular Automata | 255 |
| 14.1 | Definition and Basic Properties | 256 |
| 14.1.1 | One-Dimensional CAs | 256 |
| 14.1.2 | Notation for Binary CAs with Radius 1 | 259 |
| 14.1.3 | Topological Dynamical Properties of CA F_{90} | 260 |
| 14.1.4 | Measures for CAs | 262 |

| | | |
|----------|---------------------------------------------------------------|------------|
| 14.2 | Equicontinuity Properties of CA | 264 |
| 14.3 | Higher Dimensional CAs | 267 |
| 14.3.1 | Conway's Game of Life | 269 |
| 14.4 | Stochastic Cellular Automata | 270 |
| 14.5 | Applications to Virus Dynamics | 273 |
| A | Measures on Topological Spaces | 279 |
| A.1 | Lebesgue Measure on \mathbb{R} | 279 |
| A.1.1 | Properties of m | 280 |
| A.1.2 | A Non-measurable Set | 283 |
| A.2 | Sets of Lebesgue Measure Zero | 284 |
| A.2.1 | Examples of Null Sets | 284 |
| A.2.2 | A Historical Note on Lebesgue Measure | 285 |
| A.3 | The Definition of a Measure Space | 286 |
| A.4 | Measures and Topology in Metric Spaces | 287 |
| A.4.1 | Approximation and Extension Properties | 290 |
| A.4.2 | The Space of Borel Probability Measures on X | 291 |
| A.4.3 | Hausdorff Measures and Dimension | 292 |
| A.4.4 | Some Useful Tools | 293 |
| A.5 | Examples of Metric Spaces with Borel Measures | 295 |
| A.5.1 | One-Dimensional Spaces | 295 |
| A.5.2 | Discrete Measure Spaces | 297 |
| A.5.3 | Product Spaces | 297 |
| A.5.4 | Other Spaces of Interest | 298 |
| B | Integration and Hilbert Spaces | 303 |
| B.1 | Integration | 303 |
| B.1.1 | Conventions About Values at ∞ and Measure 0 Sets | 306 |
| B.1.2 | L^p Spaces | 306 |
| B.2 | Hilbert Spaces | 308 |
| B.2.1 | Orthonormal Sets and Bases | 309 |
| B.2.2 | Orthogonal Projection in a Hilbert Space | 309 |
| B.3 | Von Neumann Factors from Ergodic Dynamical Systems | 312 |
| C | Connections to Probability Theory | 315 |
| C.1 | Vocabulary and Notation of Probability Theory | 315 |
| C.2 | The Borel-Cantelli Lemma | 319 |
| C.3 | Weak and Strong Laws of Large Numbers | 321 |
