

Michele Aresta • Angela Dibenedetto

The Carbon Dioxide Revolution

Challenges and Perspectives
for a Global Society

 Springer

Contents

1	Energy and Our Society	1
1.1	Introduction	1
1.2	The Fossil-C-Based Energy Frame	2
1.2.1	A Short History of Coal	3
1.2.2	Natural Gas: Its Discovery, Early and Actual Uses	5
1.2.3	Oil and Its Superior Properties	6
1.3	The Fossil-C Availability	7
1.4	Recovery and Reuse of Goods	10
	References	12
2	Fossil-C Application in the Energy and Chemical Industry	13
2.1	Fossil-C as Primary Source of Energy	13
2.2	Fossil-C as Source of Carbon in Synthetic Chemistry	14
2.2.1	Use of Coal	15
2.2.2	Use of Oil	17
2.2.3	Use of Natural Gas	18
2.3	Carbon Dioxide Emissions	18
	References	28
3	The Atmosphere, the Natural Cycles, and the “Greenhouse Effect”	31
3.1	The Atmosphere and Its Structure	31
3.2	The Natural Cycles of Selected Species (Elements and Compounds).	32
3.2.1	The Carbon Cycle	32
3.2.2	The Water Cycle	33
3.2.3	The Methane Cycle	34
3.2.4	The Ozone Cycle	34
3.2.5	The NO Cycle	35
3.2.6	The Sulfur Cycle	36
3.3	The Chlorofluorocarbons’ Fate in the Atmosphere	37
3.4	Greenhouse Gases, Their Atmospheric Level, and Effect on Climate Change	38

3.5	The Greenhouse Effect	38
3.6	The CO ₂ Accumulation in the Atmosphere and Correlation to Health of Our Planet	41
	References	43
4	Reduction of the CO₂ Production	45
4.1	How Much of the GHGs Emission Should Be Cut? And by When?	45
4.2	Efficiency in the Production of Electric Energy	49
4.3	Efficiency in the Transport Sector	50
4.4	Energy Utilization Efficiency	51
4.5	Quasi-zero-Carbon Emission Sources of Energy: Use of Biomass	52
	References	58
5	The Alternative, Carbon-Free Primary Energy Sources and Relevant Technologies	61
5.1	Carbon-Free Primary Sources Alternative to Fossil-C and Biomass	61
5.2	The Use of Perennial Energy Sources	62
5.2.1	Solar Energy	62
5.2.2	Wind Energy	66
5.2.3	Hydro Energy (Both Internal Waters and Oceans)	68
5.2.4	Geothermal Energy	70
	References	72
6	Reduction of Carbon Dioxide Emission into the Atmosphere: The Capture and Storage (CCS) Option	73
6.1	The Capture of CO ₂	73
6.2	CO ₂ Capture from Point Sources: Power Stations and Industrial Processes	74
6.3	Direct Capture from the Atmosphere	79
6.4	Recovery from Mobile Sources	80
6.5	Disposal of CO ₂	80
6.6	Enhanced Oil Recovery (EOR) Produces an Economic Advantage	83
6.7	Fixation of CO ₂ into Long-Lasting Inorganic Materials	85
	References	99
7	Properties of the Carbon Dioxide Molecule	101
7.1	Electronic Properties of CO ₂	101
7.1.1	The Ground State of Carbon Dioxide and Its Geometry	101
7.1.2	The Lowest Excited States of Carbon Dioxide	104
7.1.3	Main Features of Carbon Dioxide Reactivity	105

7.2	Spectroscopic Techniques Applied to the CO ₂ States	111
7.2.1	Infrared (and Raman) Spectroscopy	111
7.2.2	UV Spectrum of Carbon Dioxide	113
7.2.3	Nuclear Magnetic Resonance (NMR) Spectroscopy	114
7.3	The Phase Diagram of CO ₂	114
	References	116
8	Use of CO₂ as Technical Fluid (Technological Uses of CO₂)	123
8.1	Introduction	123
8.2	Sources of CO ₂	124
8.3	Uses of CO ₂ and Its Quality	126
8.3.1	Food Industry	126
8.3.2	Additive to Beverages	128
8.3.3	Extraction of Fragrances	129
8.3.4	Solvent and Processing Fluid in the Chemical Industry	130
8.3.5	Dry-Cleaning Fluid	131
8.3.6	Cleaning Agent in the Metal- and Electronic Industry	131
8.3.7	Fluid in Air-Conditioners	132
8.3.8	Fire Extinguisher	133
8.3.9	Water Treatment	133
8.3.10	Greenhouses	134
8.3.11	Dry Ice	135
8.3.12	Other Uses	137
8.4	Some Economic Figures	137
	References	138
9	Circular Economy and Carbon Dioxide Conversion	139
9.1	The Circular Economy	139
9.2	Carbon Dioxide Conversion (CCU)	147
9.2.1	CCU and Resources Conservation	147
9.2.2	CCU, Sustainability and Innovation	149
9.2.3	CCU and the Sustainability of the Polymer Industry	150
9.2.4	CCU and the Innovation in the Synthesis of Chemicals	152
9.2.5	CCU and the Sustainable Production of Fuels	158
9.2.6	CCU in the Production of Large Scale Fuels	161
9.2.7	Other Reactions	163
9.2.8	Electrochemical Reduction of CO ₂	164
9.3	CCU and Clustering of Processes	165

9.4	Conclusions	167
	References	171
10	Solar Chemistry and CO₂ Conversion	177
10.1	Introduction	177
10.2	Utilization of Solar Energy for Driving Chemical Reactions	178
10.3	The Solar Spectrum	179
10.4	Photochemical Reactions for CO ₂ Conversion	180
10.5	PV-Driven Processes	186
10.5.1	Electrochemical Reduction of CO ₂	186
10.5.2	Photoelectrochemical Reduction of CO ₂	187
10.5.3	Electrochemical and Photoelectrochemical Processes Coupled with Biosystems	188
10.6	High-Temperature Processes Driven by Solar Power Concentrators	189
	References	190
11	Enhancing Nature	193
11.1	Introduction	193
11.2	Direct and Indirect Use of Biomass as Source of Energy and the Enhanced CO ₂ Fixation	195
11.2.1	Production of Fuels and Chemicals from Aquatic Biomass	196
11.2.2	Production of Fuels and Chemicals from Terrestrial Biomass	199
11.3	Carbon Dioxide and <i>Biotechnologies</i>	206
11.4	Bioelectrochemical Systems	208
11.5	Integration of Catalysis and Biotechnology	211
	References	214
12	The CO₂ Revolution	219
12.1	Is CO ₂ Majorly Responsible for Climate Change?	219
12.2	The Carbon Dioxide Revolution	222
	References	227
	Appendix A	229
	Appendix B	233
	Appendix C	237
	Appendix D	239
	Appendix E	241

Appendix F	243
Appendix G	245
Appendix H	247
Appendix I	249
Appendix J	261
