List of contributors	xvii
About the editors	xxi
Preface	xxiii
1. Entangling the interaction between essential and nonessential nutrients: implications for global food security	1
<i>Mohsin Tanveer and Sergey Shabala</i>	
1.1 Introduction	1
1.2 Potassium/sodium interaction	2
1.3 Zinc/cadmium interaction	6
1.4 Arsenic/nitrogen/phosphorus interaction	11
1.5 Concluding remarks	15
References	15
2. The importance of beneficial and essential trace and ultratrace elements in plant nutrition, growth, and stress tolerance	27
<i>Surabhi Awasthi, Reshu Chauhan and Sudhakar Srivastava</i>	
2.1 Introduction	27
2.2 Beneficial and essential elements	28
2.2.1 Aluminum	29
2.2.2 Boron	30
2.2.3 Cobalt	31
2.2.4 Copper	32
2.2.5 Iodine	33
2.2.6 Iron	34
2.2.7 Manganese	35
2.2.8 Molybdenum	36
2.2.9 Nickel	37
2.2.10 Selenium	38
2.2.11 Silicon	39
2.2.12 Zinc	40
References	40

3. Crop nitrogen use efficiency for sustainable food security and climate change mitigation	47
<i>Bhumika Madan, Aakansha Malik and Nandula Raghuram</i>	
3.1 Introduction	47
3.2 Reactive nitrogen, climate change, and agriculture	47
3.3 Understanding nitrogen use efficiency	49
3.4 Agronomic approaches to improve nitrogen use efficiency	50
3.5 Microbial nitrogen fixation and crop nitrogen use efficiency	51
3.6 Plant biological approaches to improve nitrogen use efficiency	53
3.7 Transgenic and genome-editing approaches for improving nitrogen use efficiency	54
3.8 Manipulation of genes involved in nitrogen acquisition	54
3.9 Manipulation of genes involved in nitrogen assimilation	55
3.10 Manipulation of genes involved in nitrogen translocation and remobilization	58
3.11 Manipulation of genes involved in carbon metabolism and its regulation	59
3.12 Manipulation of genes involved in signaling	60
3.13 Conclusions	62
Acknowledgments	66
References	66
4. Role of plant sulfur metabolism in human nutrition and food security	73
<i>Anna Koprivova and Stanislav Kopriva</i>	
4.1 Introduction	73
4.2 Sulfur compounds in human nutrition and health	75
4.3 Plant sulfate assimilation and methionine synthesis	79
4.4 Control of plant sulfate assimilation	81
4.5 Impact of changing environment on plant sulfur nutrition	83
4.6 Plant sulfur nutrition and food security—open questions	85
4.7 Conclusions	87
Acknowledgments	87
References	87
5. Potassium: an emerging signal mediator in plants?	97
<i>Swati Mahiwal and Girdhar K. Pandey</i>	
5.1 Introduction	97
5.1.1 K^+ as a signal in the biological world	97
5.2 K^+ as a signal in bacteria	98
5.3 Does a similar mechanism exist in plants?	99
5.4 How is potassium perceived and sensed in plants?	99
5.5 How does K^+ sensing take place?	100
5.5.1 Membrane potential as a potent K^+ sensor	100
5.5.2 Plasma membrane localized K^+ sensors	102

5.5.3	Cytoplasmic K ⁺ sensors: an interplay of cytoplasmic enzymes	103
5.6	Is potassium deficiency a potential stress signal?	103
5.7	K⁺ as a signal mediator in plants: connecting the dots between K⁺ deprivation and Ca²⁺ signaling	104
5.7.1	Can potassium act as a signaling molecule? What have we learned so far?	108
5.7.2	Why is K ⁺ not considered a second messenger? Does it have the potential qualities to qualify as a second messenger?	110
5.8	Conclusion and future perspectives	111
	Acknowledgments	112
	References	112
6.	Exploring the relationship between plant secondary metabolites and macronutrient homeostasis	119
	<i>Kareem A. Mosa, Muna A. Ali, Kalidoss Ramamoorthy and Ahmed Ismail</i>	
6.1	Introduction	119
6.2	Macronutrient cycling in soil	120
6.2.1	Nitrogen (N) cycling in soil	121
6.2.2	Phosphorus (P) cycling in soil	122
6.2.3	Potassium (K) cycling in soil	123
6.2.4	Sulfur (S) cycling in soil	124
6.3	Plant–soil interactions: macronutrient sensing, uptake, and regulation	124
6.3.1	Nitrogen sensing and uptake	126
6.3.2	Phosphorus sensing and uptake	128
6.3.3	Potassium sensing and uptake	128
6.3.4	Sulfur sensing and uptake	129
6.3.5	Regulations of macronutrients within the circadian clock	130
6.4	Plant secondary metabolites and their response to soil fertility	131
6.4.1	Classes of plant secondary metabolites	131
6.4.2	Response of plant secondary metabolites to soil macronutrient fertility	132
6.5	Conclusion	138
	References	138
7.	Water and nitrogen fertilization management in light of climate change: impacts on food security and product quality	147
	<i>A.P.G. Fernandes, J. Machado, T.R. Fernandes, M.W. Vasconcelos and S.M.P. Carvalho</i>	
7.1	Introduction	147
7.2	Impact of climate change on water resources	150

7.2.1	The effect of water scarcity on agricultural yield and product quality	150
7.2.2	Effect of poor water quality on yield and product quality	154
7.3	Nitrogen fertilization management in light of climate change	156
7.3.1	Effects of low nitrogen levels on yield and nutritional quality	157
7.3.2	Effects of high nitrogen levels on the environment, yield, and nutritional quality	159
7.4	Overview on strategies to enhance water use efficiency and N use efficiency and future prospects	160
7.5	Conclusions	163
	Acknowledgments	164
	References	164

8. **Soilless indoor smart agriculture as an emerging enabler technology for food and nutrition security amidst climate change** 179

Arun Banerjee, Kenny Paul, Alok Varshney, Rajesh Nandru, Rahul Badhwar, Ajit Sapre and Santanu Dasgupta

8.1	Climate change and its impact on food and nutrition security	179
8.1.1	Climate change and connection to food and nutrition insecurity	182
8.1.2	Food security scenario and climate change	182
8.1.3	Nutrition security scenario and climate change	183
8.1.4	Climate-smart agriculture and soilless cultivation as an “emerging enabler” technology	184
8.2	Soilless indoor cultivation as climate-smart agriculture	185
8.2.1	Controlled environment agriculture and soilless cultivation technology	185
8.2.2	Different types of soilless cultivation	186
8.3	Soilless systems as an enabling technology for food security	192
8.3.1	Year-round productivity and yield improvement in soilless cultivation systems	192
8.3.2	Improving resource use efficiency—water use efficiency and land surface use efficiency	196
8.3.3	Role of microbiome and biostimulants in improving crop performances in soilless systems	199
8.4	Soilless systems as an enabling technology for nutrition security	206
8.4.1	Healthy and fresh produce through soilless systems	206
8.4.2	Improving nutrient use efficiency via biofortification of micronutrients	206
8.4.3	Enriching antioxidants, vitamins, and essential nutrients through soilless systems	208
8.5	Role of precision agriculture and automation for enabling food and nutrition security	209

4

5.

8.5.1	Precision agriculture and automation in context with soilless cultivation system	210
8.5.2	Automation and IoT tools to manage soilless cultivation systems	211
8.5.3	Reducing labor costs and contactless farming using modern tools	213
8.6	Challenges and future perspectives	213
8.7	Conclusion	214
	Acknowledgments	215
	References	215
9.	Plant ionomics: toward high-throughput nutrient profiling	227
	<i>Anshuman Singh, Ashutosh Singh, Ram Sewak Tomar, Ayushi Jaiswal and Anil Kumar</i>	
9.1	Introduction	227
9.2	Concept of ionomics	228
9.3	Important events in ionomics	228
9.4	Spectrum of mineral elements	229
9.5	Mineral acquisition, distribution, and storage in plants	229
9.6	Mineral interaction in plants	230
9.7	Element–element interactions	230
9.8	Element–gene interactions	230
9.9	Element–environment interactions	230
9.10	Interaction with mineral chelating or sequestering molecules	231
9.11	Bioinformatics involved in ionomics	231
9.12	Different technology used in plant element profiling	232
9.13	Techniques based on electronic properties of elements	232
9.13.1	Atomic absorption spectrometry	233
9.13.2	Optical emission spectroscopy	234
9.13.3	Ion beam analysis	234
9.13.4	X-ray fluorescence spectroscopy	234
9.13.5	Inductively coupled plasma–mass spectrometry	235
9.14	Techniques based on nuclear properties of atoms	236
9.14.1	Neutron activation analysis	236
9.15	Recent advances in plant ionomic techniques	237
9.16	Applications of plant ionomics	237
9.17	Paradigm shift from ionome to gene regulating network	238
9.18	Ionomics in Identifying of QTLs/genes	238
9.19	Functional validation of gene(s)	240
9.20	Ionomics for coping with abiotic stresses	241
9.21	Ionomics for biofortification	243
9.22	Conclusion and future prospects	243
	References	245
	Further reading	252

10. Cobalt and molybdenum: deficiency, toxicity, and nutritional role in plant growth and development	255
<i>Aryadeep Roychoudhury and Swarnavo Chakraborty</i>	
10.1 Introduction	255
10.2 Toxicity and deficiency of cobalt and molybdenum in plants	257
10.2.1 Cobalt toxicity and deficiency	257
10.2.2 Molybdenum toxicity and deficiency	259
10.3 Role in plant growth and development	261
10.3.1 Role of cobalt	261
10.3.2 Role of molybdenum	263
10.4 Conclusion and future perspectives	266
Acknowledgments	267
References	267
11. Interplay between sodium and chloride decides the plant's fate under salt and drought stress conditions	271
<i>Koushik Chakraborty, Subhankar Mondal, Debarati Bhaduri, Ankita Mohanty and Alivia Paul</i>	
11.1 Introduction	271
11.2 Relative impact of dominant ions on plants under ionic stress	273
11.3 Impact of sodium and other associated cations	277
11.3.1 Sodium: its role as a nutrient and an osmoticum in plants under stress	277
11.3.2 Na ⁺ uptake and transport under stress	277
11.3.3 Impact of Na ⁺ on K ⁺ and its regulation for maintaining cellular homeostasis	278
11.3.4 Interaction between Na ⁺ and Ca ²⁺	280
11.4 Impact of chloride and other associated anions	281
11.4.1 Cl ⁻ uptake and regulation in response to salt stress	281
11.4.2 Differential accumulation of chloride and its compartmentalization	282
11.4.3 Interaction between Cl ⁻ and NO ₃ ⁻	283
11.5 Regulation of uptake and in-planta movement of Na ⁺ and Cl ⁻ ions	283
11.5.1 Regulation of uptake and in-planta movement of sodium (Na ⁺) ions	283
11.5.2 Regulation of uptake and in-planta movement of chloride (Cl ⁻) ions	286
11.6 Differential impact of sodium and chloride on glycophytes, halophytes, and xerophytes	292
11.6.1 Impact of sodium (Na ⁺) and chloride (Cl ⁻) on glycophytes	292
11.6.2 Impact of sodium and chloride on xerophytes	293

11.6.3	Molecular mechanism of hypertolerance of xerophytes to salt and osmotic stress	295
11.6.4	Impact of sodium (Na^+) and chloride (Cl^-) on halophytes	295
11.6.5	Gene family members that are involved in regulating drought and salinity stress tolerance	296
11.7	Changes in overall ionomics in plants under Na^+ and Cl^- stress	297
11.8	Ameliorative role of sodium and chloride on stress tolerance	299
11.8.1	Priming as an ameliorative technique for drought and salt stress	300
11.8.2	Halopriming and growth enhancement of seedlings	301
11.9	Conclusions	302
	References	302
12.	Drought and nitrogen stress effects and tolerance mechanisms in tomato: a review	315
	<i>J. Machado, A.P.G. Fernandes, T.R. Fernandes, E. Heuvelink, M.W. Vasconcelos and S.M.P. Carvalho</i>	
12.1	Introduction	315
12.2	Tomato plant responses to drought stress	316
12.2.1	Impact on plant growth, yield, and fruit quality	317
12.2.2	Physiological and biochemical mechanisms underlying drought stress and tolerance	322
12.2.3	Molecular mechanisms underlying drought tolerance	326
12.3	Tomato plant responses to nitrogen stress	332
12.3.1	Impact of nitrogen on plant growth, yield, and fruit quality	332
12.3.2	Physiological and biochemical mechanisms underlying N stress	335
12.3.3	Molecular mechanisms underlying nitrogen stress and tolerance	338
12.4	Conclusions and future prospects	343
	Acknowledgments	343
	References	344
13.	Arsenic stress and mineral nutrition in plants	361
	<i>Santanu Samanta and Aryadeep Roychoudhury</i>	
13.1	Introduction	361
13.2	Effects of arsenic on plants	362
13.3	Mineral nutrition in plants	363
13.4	Effect of arsenic on mineral nutrition in plants	364
13.4.1	Nitrogen	364
13.4.2	Phosphorus	365
13.4.3	Potassium	366

13.4.4	Calcium	366
13.4.5	Sulfur	367
13.4.6	Magnesium	367
13.4.7	Manganese	368
13.4.8	Boron	368
13.4.9	Iron	368
13.4.10	Copper	369
13.4.11	Zinc	369
13.5	Conclusion and future perspectives	369
	Acknowledgments	370
	References	370
	Further reading	375
14.	Recent advances in micronutrient foliar spray for enhancing crop productivity and managing abiotic stress tolerance	377
	<i>Ratnakumar Pasala, Ramesh Kulasekaran, Brij Bihari Pandey, C.H.L.N. Manikanta, K. Gopika, P.S. John Daniel, Sonia Elthury and Praduman Yadav</i>	
14.1	Micronutrients	377
14.2	Micronutrients as foliar sprays	378
14.2.1	Boron	378
14.2.2	Copper	383
14.2.3	Iron	383
14.2.4	Manganese	384
14.2.5	Zinc	385
14.2.6	Molybdenum	385
14.2.7	Silica	386
14.3	Micronutrient use efficiency	386
14.4	Nano-form of micronutrients	387
14.5	Micronutrients for mitigation of abiotic stresses	387
14.5.1	Drought	387
14.5.2	Heat stress	388
14.5.3	Salinity stress	388
14.5.4	Cold stress	389
14.5.5	Light stress	389
14.6	Cell homeostasis and crosstalk between micronutrients	390
14.7	Enhanced crop yield and productivity	391
14.8	Way forward	391
	References	392
15.	Biotechnological tools for manipulating nutrient homeostasis in plants	399
	<i>Jorge González-Villagra, Marjorie Reyes-Díaz, Zed Rengel and Claudio Inostroza-Blancheteau</i>	
15.1	Introduction	399

15.2	Biotechnological tools for macronutrient manipulation	400
15.2.1	Nitrogen	400
15.2.2	Phosphorus	402
15.2.3	Potassium	403
15.2.4	Calcium	404
15.2.5	Magnesium	405
15.3	Biotechnological tools for micronutrient manipulation	406
15.3.1	Boron	406
15.3.2	Manganese	409
15.3.3	Zinc	411
15.4	Future directions	412
	References	412
16.	Crop biofortification and food security	423
	<i>Erum Shoab and Kathleen Hefferon</i>	
16.1	Introduction	423
16.2	New plant-breeding technologies	423
16.3	Agricultural biotechnology to address food insecurity and poverty	424
16.4	Crops biofortified with iron and zinc	425
16.5	Golden rice and golden bananas	427
16.6	Biofortified maize and cassava	429
16.7	Nutritionally enhanced tomatoes	429
16.8	Future of biofortified crops and importance to global food security	430
	References	432
	Further reading	435
17.	Biotechnological approaches for generating iron-rich crops	437
	<i>Samriti Mankotia, Jagannath Swain and Santosh B. Satbhai</i>	
17.1	Introduction	437
17.2	Biofortification methods	439
17.3	Transgenic approaches for improving iron content of plants	440
17.3.1	Increasing iron content by modifying iron-uptake strategy	440
17.3.2	Facilitating iron transport and distribution	441
17.3.3	Facilitating iron storage	442
17.4	Role of microbes in the biofortification of iron	443
17.5	Conclusions and future perspectives	443
	Acknowledgments	447
	References	447

18. Use of nanomaterials in plant nutrition	453
<i>Adalberto Benavides-Mendoza</i>	
18.1 Introduction	453
18.2 Fertilizers and their efficiency	455
18.3 Nanofertilizers and fertilizer nanoadditives	460
18.3.1 Minor soil fixation, precipitation, or speciation in nonbioavailable forms	468
18.3.2 Less volatilization and leaching	468
18.3.3 Greater productivity and yield	470
18.4 Pros and cons of nanofertilizers and nanomaterials	470
18.5 Conclusions	474
References	474
19. Plant beneficial microbes in mitigating the nutrient cycling for sustainable agriculture and food security	483
<i>Richa Salwan and Vivek Sharma</i>	
19.1 Introduction	483
19.2 Plant beneficial microorganisms	484
19.3 Microorganisms in nutrient recycling	489
19.4 Nitrogen fixation	489
19.5 Mineral solubilization by beneficial microbes	492
19.6 Phosphorus solubilization	493
19.7 Potassium solubilization	494
19.8 Siderophore production	496
19.9 Zinc solubilization	497
19.10 Phytohormone production	498
19.11 Application of plant beneficial microorganisms in agriculture and food security	500
19.12 Conclusion and future prospects	501
Acknowledgments	502
References	502
Further reading	512
20. Nutritional imbalance in plants under rising atmospheric CO₂	513
<i>Pravesh Kundu, Komal Goel and Gaurav Zinta</i>	
20.1 Introduction	513
20.2 Effect of elevated CO ₂ on C3 and C4 plants	514
20.3 Effect of elevated CO ₂ on photosynthesis	516
20.4 Effect of elevated CO ₂ on yield and growth	516
20.5 Effect of elevated CO ₂ on leaf area	518
20.6 Effect of elevated CO ₂ on proteins	518
20.7 Effect of elevated CO ₂ on stoichiometry	519

20.8	Effect of elevated CO ₂ on photorespiration	520
20.9	Effect of elevated CO ₂ on nitrogen	521
20.10	Effect of elevated CO ₂ on human nutrition	522
20.11	Effect of elevated CO ₂ on secondary metabolites	523
20.12	Effect of elevated CO ₂ on vitamins	528
20.13	Conclusion	528
	References	528
	Index	537
