## Contents

	Preface and Acknowledgments	xix
	<b>Before All Else</b>	1
	0.1 Data Tables	1
	0.2 What Is Getformula?	1
	0.3 How to Put Getformula into Your Excel Notebook	1
	0.4 Saving the Excel Workbook: Windows	4
	0.5 Saving the Excel Workbook: Mac	5
	0.6 Do You Have to Put Getformula into Each Excel Workbook?	5
	0.7 Using Formulatext() Instead of Getformula	6
	0.8 A Shortcut to Use Getformula and Formulatext	7
	0.9 Recording Getformula: The Windows Case	7
	0.10 Recording Getformula: The Mac Case	10
	0.11 Using R	11
<b>I</b>	<b>CORPORATE FINANCE</b>	13
<b>1</b>	<b>Basic Financial Analysis</b>	15
	1.1 Overview	15
	1.2 Present Value and Net Present Value	16
	1.3 The Internal Rate of Return (IRR) and Loan Tables	22
	1.4 Multiple Internal Rates of Return	27
	1.5 Flat Payment Schedules	29
	1.6 Future Values and Applications	30
	1.7 A Pension Problem—Complicating the Future Value Problem	33
	1.8 Continuous Compounding	38
	1.9 Discounting Using Dated Cash Flows	42
	Exercises	45
<b>2</b>	<b>Corporate Valuation Overview</b>	53
	2.1 Overview	53
	2.2 Three Methods to Compute Enterprise Value (EV)	53
	2.3 Using Accounting Book Values to Value a Company: The Firm's Accounting Enterprise Value	54
	2.4 The Efficient Markets Approach to Corporate Valuation	59

<b>8</b>	<b>Modeling the Term Structure</b>	207
	8.1 Overview	207
	8.2 The Term Structure of Interest Rates	207
	8.3 Bond Pricing Using the Equivalent Single Bond Approach	211
	8.4 Pricing with Several Bonds at the Same Maturity	215
	8.5 The Nelson-Siegel Approach of Fitting a Functional Form to the Term Structure	219
	8.6 The Properties of the Nelson-Siegel Term Structure	222
	8.7 Term Structure for Treasury Notes	224
	8.8 Summary	227
	Appendix: VBA Functions Used in This Chapter	227
<b>9</b>	<b>Calculating Default-Adjusted Expected Bond Returns</b>	231
	9.1 Overview	231
	9.2 Calculating the Expected Return in a One-Period Framework	233
	9.3 Calculating the Bond Expected Return in a Multi-period Framework	234
	9.4 A Numerical Example	238
	9.5 Experimenting with the Example	240
	9.6 Computing the Bond Expected Return for an Actual Bond	242
	9.7 Semiannual Transition Matrices	246
	9.8 Computing Bond Beta	249
	9.9 Summary	250
	Exercises	251
<b>III</b>	<b>PORTFOLIO THEORY</b>	253
<b>10</b>	<b>Portfolio Models—Introduction</b>	255
	10.1 Overview	255
	10.2 Computing Descriptive Statistics for Stocks	255
	10.3 Calculating Portfolio Means and Variances	263
	10.4 Portfolio Mean and Variance—Case of $N$ Assets	268
	10.5 Envelope Portfolios	276
	10.6 Summary	279
	Exercises	279
	Appendix 10.1: Continuously Compounded versus Geometric Returns	281
	Appendix 10.2: Adjusting for Dividends	283

<b>11</b>	<b>Efficient Portfolios and the Efficient Frontier</b>	287
	11.1 Overview	287
	11.2 Some Preliminary Definitions and Notation	287
	11.3 Five Propositions on Efficient Portfolios and the CAPM	289
	11.4 Calculating the Efficient Frontier: An Example	294
	11.5 Three Notes on the Optimization Procedure	304
	11.6 Finding the Market Portfolio: The Capital Market Line (CML)	307
	11.7 Computing the Global Minimum Variance Portfolio (GMVP)	309
	11.8 Testing the SML—Implementing Propositions 3–5	312
	11.9 Efficient Portfolios without Short Sales	315
	11.10 Summary	331
	Exercises	331
	Mathematical Appendix	334
<b>12</b>	<b>Calculating the Variance-Covariance Matrix</b>	337
	12.1 Overview	337
	12.2 Computing the Sample Variance-Covariance Matrix	337
	12.3 The Correlation Matrix	342
	12.4 Four Alternatives to the Sample Variance-Covariance Matrix	345
	12.5 Alternatives to the Sample Variance-Covariance: The Single-Index Model	346
	12.6 Alternatives to the Sample Variance-Covariance: Constant Correlation	348
	12.7 Alternatives to the Sample Variance-Covariance: Shrinkage Methods	350
	12.8 Using Option Information to Compute the Variance Matrix	352
	12.9 Which Method to Compute the Variance-Covariance Matrix?	354
	12.10 Summing Up	355
	Exercises	355
<b>13</b>	<b>Estimating Betas and the Security Market Line</b>	357
	13.1 Overview	357
	13.2 Testing the SML	360
	13.3 Did We Learn Something?	366
	13.4 The Non-efficiency of the “Market Portfolio”	368
	13.5 So What’s the Real Market Portfolio? How Can We Test the CAPM?	372

	13.6 Conclusion: Does the CAPM Have Any Uses?	373
	Exercises	374
<b>14</b>	<b>Event Studies</b>	377
	14.1 Overview	377
	14.2 Outline of an Event Study	377
	14.3 An Initial Event Study: Procter & Gamble Buys Gillette	381
	14.4 A Fuller Event Study: Impact of Earnings Announcements on Stock Prices	389
	14.5 Using a Two-Factor Model of Returns for an Event Study	396
	14.6 Using Excel's Offset Function to Locate a Regression in a Data Set	401
	14.7 Conclusion	403
<b>15</b>	<b>The Black-Litterman Approach to Portfolio Optimization</b>	405
	15.1 Overview	405
	15.2 A Naive Problem	407
	15.3 Black and Litterman's Solution to the Optimization Problem	412
	15.4 BL Step 1: What Does the Market Think?	413
	15.5 BL Step 2: Introducing Opinions—What Does Joanna Think?	417
	15.6 Using BL for International Asset Allocation	427
	15.7 Summary	432
	Exercises	432
<b>IV</b>	<b>OPTIONS</b>	435
<b>16</b>	<b>Introduction to Options</b>	437
	16.1 Overview	437
	16.2 Basic Option Definitions and Terminology	437
	16.3 Some Examples	440
	16.4 Option Payoff and Profit Patterns	441
	16.5 Option Strategies: Payoffs from Portfolios of Options and Stocks	445
	16.6 Option Arbitrage Propositions	448
	16.7 Summary	455
	Exercises	455

<b>17</b>	<b>The Binomial Option Pricing Model</b>	459
	17.1 Overview	459
	17.2 Two-Date Binomial Pricing	459
	17.3 The State Prices	461
	17.4 The Multi-period Binomial Model	464
	17.5 Pricing American Options Using the Binomial Pricing Model	471
	17.6 Programming the Binomial Option Pricing Model	474
	17.7 Convergence of Binomial Pricing to the Black-Scholes Price	481
	17.8 Using the Binomial Model to Price Employee Stock Options	483
	17.9 Using the Binomial Model to Price Nonstandard Options: An Example	493
	17.10 Summary	495
	Exercises	495
<b>18</b>	<b>The Black-Scholes Model</b>	499
	18.1 Overview	499
	18.2 The Black-Scholes Model	499
	18.3 Programming the Black-Scholes Option Pricing Model	501
	18.4 Calculating the Volatility	505
	18.5 Programming a Function to Find the Implied Volatility	508
	18.6 Dividend Adjustments to the Black-Scholes	512
	18.7 “Bang for the Buck” with Options	518
	18.8 The Black Model for Bond Option Valuation	520
	18.9 Using the Black-Scholes Model to Price Risky Debt	522
	18.10 Using the Black-Scholes Formula to Price Structured Securities	524
	18.11 Summary	533
	Exercises	534
<b>19</b>	<b>Option Greeks</b>	537
	19.1 Overview	537
	19.2 Defining and Computing the Greeks	538
	19.3 Delta Hedging a Call	546
	19.4 The Greeks of a Portfolio	548
	19.5 Greek-Neutral Portfolio	550
	19.6 The Relationship between Delta, Theta, and Gamma	554
	19.7 Summary	555
	Exercises	555

	Appendix 19.1: VBA for Greeks	556
	Appendix 19.2: R Code for Greeks	563
<b>20</b>	<b>Real Options</b>	<b>569</b>
	20.1 Overview	569
	20.2 A Simple Example of the Option to Expand	570
	20.3 The Abandonment Option	573
	20.4 Valuing the Abandonment Option as a Series of Puts	580
	20.5 Valuing a Biotechnology Project	582
	20.6 Summary	589
	Exercises	589
<b>V</b>	<b>MONTE CARLO METHODS</b>	<b>591</b>
<b>21</b>	<b>Generating and Using Random Numbers</b>	<b>593</b>
	21.1 Overview	593
	21.2 Rand() and Rnd: The Excel and VBA Random-Number Generators	594
	21.3 Scaling Uniformly Distributed Numbers	604
	21.4 Generating Normally Distributed Random Numbers	605
	21.5 Norm.Inv: Another Way to Generate Normal Deviates	617
	21.6 Scaling Normally Distributed Numbers	619
	21.7 Generating Correlated Random Numbers	620
	21.8 What's Our Interest in Correlation? A Small Case	624
	21.9 Multiple Random Variables with Correlation: The Cholesky Decomposition	627
	21.10 Multivariate Uniform Simulations	634
	21.11 Summary	636
	Exercises	636
<b>22</b>	<b>An Introduction to Monte Carlo Methods</b>	<b>639</b>
	22.1 Overview	639
	22.2 Computing $\pi$ Using Monte Carlo	639
	22.3 Programming the Monte Carlo Approach to Estimate $\pi$	644
	22.4 Another Monte Carlo Problem: Investment and Retirement	648
	22.5 A Monte Carlo Simulation of the Investment Problem	650
	22.6 Summary	657
	Exercises	657
	Appendix: Some Comments on the Value of $\pi$	659

<b>23</b>	<b>Simulating Stock Prices</b>	661
	23.1 Overview	661
	23.2 What Do Stock Prices Look Like?	662
	23.3 Lognormal Price Distributions and Geometric Diffusions	667
	23.4 What Does the Lognormal Distribution Look Like?	671
	23.5 Simulating Lognormal Price Paths	674
	23.6 Technical Analysis	681
	23.7 Calculating the Parameters of the Lognormal Distribution from Stock Prices	682
	23.8 Summary	684
	Exercises	685
	Appendix: The Itô's Lemma	687
<b>24</b>	<b>Monte Carlo Simulations for Investments</b>	689
	24.1 Overview	689
	24.2 Simulating Price and Returns for a Single Stock	689
	24.3 Portfolio of Two Stocks	693
	24.4 Adding a Risk-Free Asset	697
	24.5 Multiple Stock Portfolios	699
	24.6 Simulating Savings for Pensions	703
	24.7 Beta and Return	707
	24.8 Summary	711
	Exercises	711
<b>25</b>	<b>Value at Risk (VaR)</b>	715
	25.1 Overview	715
	25.2 The Three Types of VaR Models	718
	25.3 VaR of an $N$ -Asset Portfolio	724
	25.4 Backtesting	729
<b>26</b>	<b>Replicating Options and Option Strategies</b>	733
	26.1 Overview	733
	26.2 Imperfect but Cashless Replication of a Call Option	738
	26.3 Simulating Portfolio Insurance	742
	26.4 Some Properties of Portfolio Insurance	749
	26.5 Digression: Insuring Total Portfolio Returns	750
	26.6 Simulating a Butterfly	754

	26.7 Summary	762
	Exercises	763
<b>27</b>	<b>Using Monte Carlo Methods for Option Pricing</b>	<b>765</b>
	27.1 Overview	765
	27.2 Pricing Plain-Vanilla Options Using Monte Carlo Methods	766
	27.3 State Prices, Probabilities, and Risk-Neutrality	773
	27.4 Pricing Plain-Vanilla Options—Monte Carlo Binomial Model Approach	776
	27.5 Pricing Asian Options	789
	27.6 Barrier Options	802
	27.7 Basket Options	813
	27.8 Rainbow Options	816
	27.9 Binary Options	818
	27.10 Chooser Options	820
	27.11 Lookback Options	821
	27.12 Summary	825
	Exercises	826
<b>VI</b>	<b>TECHNICAL</b>	<b>829</b>
<b>28</b>	<b>Data Tables</b>	<b>831</b>
	28.1 Overview	831
	28.2 An Example	831
	28.3 Creating a One-Dimensional Data Table	832
	28.4 Creating a Two-Dimensional Data Table	834
	28.5 An Aesthetic Note: Hiding the Formula Cells	835
	28.6 Excel Data Tables Are Arrays	837
	28.7 Data Tables on Blank Cells (Advanced)	837
	28.8 Data Tales Can Stop Your Computer	844
	Exercises	845
<b>29</b>	<b>Matrices</b>	<b>849</b>
	29.1 Overview	849
	29.2 Matrix Operations	849
	29.3 Matrix Inverses	854
	29.4 Solving Systems of Simultaneous Linear Equations	855
	Exercises	856

<b>30</b>	<b>Excel Functions</b>	859
	30.1 Overview	859
	30.2 Financial Functions	859
	30.3 Dates and Date Functions	873
	30.4 Statistical Functions	879
	30.5 Doing Regressions with Excel	884
	30.6 Conditional Functions	896
	30.7 Reference Functions	898
	30.8 Large, Rank, Percentile, and Percentrank	901
	30.9 Count, CountA, Countif, Countifs, Averageif, Averageifs	902
<b>31</b>	<b>Array Functions</b>	905
	31.1 Overview	905
	31.2 Some Built-In Excel Array Functions	906
	31.3 Homemade Array Functions	911
	31.4 Array Formulas with Matrices	913
	Exercises	917
<b>32</b>	<b>Some Excel Hints</b>	919
	32.1 Overview	919
	32.2 Fast Copy: Filling in Data Next to Filled-In Column	919
	32.3 Filling Cells with a Series	921
	32.4 Multi-line Cells	922
	32.5 Multi-line Cells with Text Formulas	923
	32.6 Writing on Multiple Spreadsheets	924
	32.7 Moving Multiple Sheets of an Excel Notebook	925
	32.8 Text Functions in Excel	926
	32.9 Chart Titles That Update	926
	32.10 Putting Greek Symbols in Cells	929
	32.11 Superscripts and Subscripts	931
	32.12 Named Cells	933
	32.13 Hiding Cells (in Data Tables and Other Places)	935
	32.14 Formula Auditing	938
	32.15 Formatting Millions as Thousands	940
	32.16 Excel's Personal Notebook: Automating Frequent Procedures	942
	32.17 Quick Number Formatting	949

<b>33</b>	<b>Essentials of R Programming</b>	951
	33.1 Rule #1: Use the Provided Help for R Functions	951
	33.2 Installing a Package	952
	33.3 Setting a Default Folder (Working Directory)	953
	33.4 Understanding Data Types in R	954
	33.5 How to Read a Table from a CSV File	955
	33.6 How to Directly Import Stock Price Data to R	956
	33.7 Defining a Function	957
	33.8 Plotting Data in R	958
	33.9 The apply Function	960
	33.10 The lapply and sapply Functions	961
	Selected References	963
	Index	975
