1 Quantum Field Theory Basics	1
Introduction	1
1 Relationship between the Equations of Motion of ϕ and ϕ_{in}	11
2 Little-Group Elements for Massless Particles	12
3 S-matrix in Terms of ϕ_{in} and ϕ_{out}	15
4 Constraints on the S-matrix from Causality	17
5 Landau Equations for Soft and Collinear Singularities	22
6 Multi-loop Integration in D Dimensions	28
7 Weinberg Convergence Theorem	31
8 Electron Anomalous Magnetic Moment	34
9 Ward-Takahashi Identities and Lorentz Invariance	38
10 Equivalence Principle and Lorentz Invariance	41
11 Lee-Nauenberg Theorem	42
12 Classical External Field Approximation	49
13 Subleading Soft Radiation in Scalar QED	53
14 Low-Burnett-Kroll Theorem	57
15 Coherent States in Quantum Field Theory	62
16 Running Couplings in a Two-Field Scalar Field Theory	64

17	Solution of the Running Equation at Two Loops	68
2	Functional Methods	71
	Introduction	71
18	Weyl Quantization	77
19	Combinatorial Interpretation of the Legendre Transform	79
20	Coherent State Path Integral	83
21	Coherent State Path Integral (Continued)	86
22	Spin Coherent States and the Berry Phase	90
23	Zeta Function Regularization of the Klein–Gordon Operator	101
24	Casimir Zero-Point Energy	103
25	The Feynman Diagrams behind the Casimir Force	106
26	Gross–Neveu Model	110
27	D’Hoker–Gagné Formula	114
28	Stochastic Quantization	118
29	Complex Langevin Equation	123
3	Non-Abelian Fields	130
	Introduction	130
30	Basic $\mathfrak{su}(n)$ Identities	137
31	More $\mathfrak{su}(n)$ Identities	138
32	More $\mathfrak{su}(n)$ Identities (Continued)	140
33	An $\mathfrak{su}(2)$ Identity	142
34	Area Derivative of a Wilson Loop	144
35	Endpoint Derivative of a Wilson Line	145
36	Makeenko–Migdal Loop Equation	148
37	Classical Non-Abelian Particles and the Wong Equations	151
38	Wong Equations from the Worldline Formalism	154
39	Non-Abelian Stokes’s Theorem	157
40	QED in the ’t Hooft–Veltman Gauge	162
41	LSZ Reduction Formula and Gauge Invariance	167
42	Large- N Expansion in $SU(N)$ Yang–Mills Theory	171
43	Soft Radiation and Antenna Effects in QCD	175
44	An Identity Obeyed by On-Shell QCD Amplitudes	183
45	Low–Burnett–Kroll Theorem in QCD	184
46	Globally Gauge Invariant Operators	188
47	Banks–Zaks Fixed Points	191
48	Instantons and Tunneling in Quantum Mechanics	193
49	Instantons as Transitions between Pure Gauges in Yang–Mills Theory	196
50	Vacua of Yang–Mills Theory	199

4 Scattering Amplitudes	205
Introduction	205
51 Enumeration of Tree Graphs	212
52 Six-Point $---+++$ Amplitude	214
53 Two Spinor-Helicity Identities	216
54 Auxiliary Vector Dependence of the Polarization Vectors	218
55 Polarization Sum in the Spinor-Helicity Formalism	220
56 Photon Decoupling Identity	221
57 Scalar–Antiscalar–Gluon Amplitudes	223
58 Color Decomposition with a Quark–Antiquark Pair	226
59 Quark–Antiquark–Gluon Amplitudes	229
60 Quark–Antiquark–Gluon Amplitudes (Continued)	233
61 Gluon–Gluon Scattering in the Spinor-Helicity Framework	238
62 Soft Limit of Gluon Amplitudes	242
63 Collinear Limit of Gluon Amplitudes	247
64 Enumeration of One-Loop Graphs	252
65 Ultraviolet Finiteness of One-Loop All-Plus Amplitudes	258
66 Rationality of One-Loop All-Plus Amplitudes	259
67 One-Loop Four-Point $++++$ Amplitude from Generalized Unitarity	261
68 One-Loop Five-Point $+++++$ Amplitude from Generalized Unitarity	267
5 Lattice, Finite T, Strong Fields	276
Introduction	276
69 Banks–Casher Relation	283
70 Nielsen–Ninomiya Theorem	285
71 Wigner Transform of a Convolution Product	290
72 Center Symmetry and Deconfinement	293
73 Photon Hard Thermal Loop from Classical Particles	297
74 Gluon Hard Thermal Loop from Colored Classical Particles	301
75 Landau–Pomeranchuk–Migdal Effect	305
76 Microcanonical Equilibration in ϕ^4 Scalar Theory	312
77 Combinatorics of Multi-particle Production	315
78 Generating Functional for Particle Production	320
79 Correlations in the Schwinger Mechanism	324
80 Schwinger Mechanism from Bogoliubov Transformations	331
81 Unruh Effect, Hawking Radiation	339
82 Anderson Localization	347
83 Scaling Theory of Anderson Localization	350
