

Contents

1	Introduction	1
1.1	Motivation	1
1.2	What Is in This Book	4
1.3	What Is Not in This Book	5
1.4	Book Organization	6
	References	7
2	Robot Models	9
2.1	Attitude Representation and Coordinate Frames	9
2.2	Models	12
2.2.1	Kinematic Unicycles	12
2.2.2	Flying Robots	14
2.3	Local and Distributed Feedback	16
	References	19
3	Coordination Problems	21
3.1	Rendezvous of Flying Robots	21
3.2	Rendezvous of Kinematic Unicycles	22
3.3	Formation Control Problems	23
3.3.1	Parallel Formations That Stop	24
3.3.2	Parallel Formation Flocking	25
3.3.3	Parallel Formation Path Following	26
3.3.4	Circular Formation Flocking	27
3.3.5	Circular Formation Path Following	29
	Reference	30
4	Control Primitives	31
4.1	Control Primitives for Single Integrators	31
4.1.1	Single Integrator Consensus Controllers	31
4.1.2	Path Following Controllers	33
4.2	Control Primitives for Double Integrators	34
4.2.1	Double Integrator Consensus	34

4.3	Control Primitives for Rotational Integrators	35
4.3.1	Rotational Integrator Equilibrium Stabilization	35
4.3.2	Rotational Integrator Consensus	36
4.4	Control Primitive for Rotating Bodies in $SO(3)$	38
	References	38
5	Rendezvous of Flying Robots	41
5.1	Review of the Rendezvous Control Problem	41
5.2	Solution of the Rendezvous Control Problem	42
5.3	Outline of the Proof of Theorem 5.1	45
5.4	Remarks on the Proposed Controller	46
5.5	Simulation Results	47
5.6	From Rendezvous to Formations	50
	References	51
6	Rendezvous of Unicycles	53
6.1	Review of The Rendezvous Control Problem	53
6.2	Solution of the Rendezvous Control Problem	54
6.3	Outline of the Proof of Theorem 6.1	56
6.4	Remarks on the Proposed Controller	58
6.5	Simulation Results	58
	References	60
7	Unicycle Formations Coming to Rest	61
7.1	The Parallel Formation Problem (PP)	61
7.2	Solution of the Parallel Formation Problem	62
7.3	Outline of the Proof of Theorem 7.1	64
7.4	Remarks on the Proposed Controller	65
7.5	Special Cases: Line Formations and Full Synchronization	66
7.6	Simulation Results	68
	References	70
8	Unicycle Formations with Parallel and Circular Motions	71
8.1	Introduction	71
8.2	Final Linear Motion	72
8.3	Proof of Theorem 8.1	78
8.4	Final Circular Motion	86
8.5	Proof of Theorem 8.2	90
8.6	Simulation Results	94
	Reference	95
9	Unicycle Formation Simulation Trials	97
9.1	Performance Measures	97
9.2	Simulation Trials	100
9.2.1	Variation of the Formation Threshold	104
9.2.2	Variation of the High-Gain Parameters $\bar{\alpha}$ and k	105
9.2.3	State-Dependent Undirected Graphs	107

9.2.4	Directed Graphs	108
9.2.5	Input Saturation	110
9.2.6	Disturbances and Sampling	112
10	Bibliographical Notes	115
10.1	Literature on Multi-agent Coordination	115
10.1.1	Coordination Problems for Single and Double Integrators	115
10.1.2	Relative Equilibria for Kinematic Unicycles	116
10.1.3	Kinematic Unicycle Rendezvous	116
10.1.4	Flying Robot Attitude Synchronization and Rendezvous	117
10.1.5	Formations of Kinematic Unicycles	117
10.1.6	Kinematic Unicycle Formations with Final Collective Motions	118
	References	119
	Appendix A: Notions of Stability Theory	123
	Appendix B: Notions of Graph Theory	139
	References	145
	Index	147
