1 Itinerary: How Gabor Analysis Met Feynman Path Integrals	1
1.1 The Elements of Gabor Analysis	1
1.1.1 The Analysis of Functions via Gabor Wave Packets	3
1.2 The Analysis of Operators via Gabor Wave Packets	5
1.2.1 The Problem of Quantization	6
1.2.2 Metaplectic Operators	10
1.3 The Problem of Feynman Path Integrals	12
1.3.1 Rigorous Time-Slicing Approximation of Feynman Path Integrals	15
1.3.2 Pointwise Convergence at the Level of Integral Kernels for Feynman-Trotter Parametrices	21
1.3.3 Convergence of Time-Slicing Approximations in $\mathcal{L}(L^2)$ for Low-Regular Potentials	22
1.3.4 Convergence of Time-Slicing Approximations in the L^p Setting	24
Part I Elements of Gabor Analysis	
2 Basic Facts of Classical Analysis	27
2.1 General Notation	27
2.2 Function Spaces	29
2.2.1 Lebesgue Spaces	29
2.2.2 Differentiable Functions and Distributions	31
2.3 Basic Operations on Functions and Distributions	33
2.4 The Fourier Transform	34
2.4.1 Convolution and Fourier Multipliers	35
2.5 Some More Facts and Notations	37
3 The Gabor Analysis of Functions	39
3.1 Time-Frequency Representations	39
3.1.1 The Short-Time Fourier Transform	39
3.1.2 Quadratic Representations	43

3.2	Modulation Spaces	46
3.3	Wiener Amalgam Spaces	50
3.4	A Banach-Gelfand Triple of Modulation Spaces	55
3.5	The Sjöstrand Class and Related Spaces	57
3.6	Complements	60
3.6.1	Weight Functions	60
3.6.2	The Cohen Class of Time-Frequency Representations	62
3.6.3	Kato-Sobolev Spaces	63
3.6.4	Fourier Multipliers	67
3.6.5	More on the Sjöstrand Class	69
3.6.6	Boundedness of Time-Frequency Transforms on Modulation Spaces.....	70
3.6.7	Gabor Frames	71
4	The Gabor Analysis of Operators	73
4.1	The General Program	73
4.2	The Weyl Quantization	74
4.3	Metaplectic Operators	78
4.3.1	Notable Facts on Symplectic Matrices.....	78
4.3.2	Metaplectic Operators: Definitions and Basic Properties	81
4.3.3	The Schrödinger Equation with Quadratic Hamiltonian	84
4.3.4	Symplectic Covariance of the Weyl Calculus	90
4.3.5	Gabor Matrix of Metaplectic Operators	92
4.4	Fourier and Oscillatory Integral Operators	93
4.4.1	Canonical Transformations and the Associated Operators ...	93
4.4.2	Generalized Metaplectic Operators	96
4.4.3	Oscillatory Integral Operators with Rough Amplitude	100
4.5	Complements	101
4.5.1	Weyl Operators and Narrow Convergence.....	101
4.5.2	General Quantization Rules	103
4.5.3	The Class $FIO'(S, v_S)$	104
4.5.4	Finer Aspects of Gabor Wave Packet Analysis.....	105
5	Semiclassical Gabor Analysis	109
5.1	Semiclassical Transforms and Function Spaces	110
5.1.1	Sobolev Spaces and Embeddings	111
5.2	Semiclassical Quantization, Metaplectic Operators and FIOs	112
Part II Analysis of Feynman Path Integrals		
6	Pointwise Convergence of the Integral Kernels	119
6.1	Summary	119
6.2	Preliminary Results	122
6.2.1	The Schwartz Kernel Theorem	122
6.2.2	Uniform Estimates for Linear Changes of Variable	123

6.2.3	Exponentiation in Banach Algebras	124
6.2.4	Two Technical Lemmas	125
6.3	Reduction to the Case $\hbar = (2\pi)^{-1}$	126
6.4	The Fundamental Solution and the Trotter Formula	127
6.5	Potentials in $M_{0,s}^\infty$	132
6.6	Potentials in C_b^∞	135
6.7	Potentials in the Sjöstrand Class $M^{\infty,1}$	136
6.8	Convergence at Exceptional Times.....	140
6.9	Physics at Exceptional Times.....	143
7	Convergence in $\mathcal{L}(L^2)$ for Potentials in the Sjöstrand Class	145
7.1	Summary	145
7.2	An Abstract Approximation Result in $\mathcal{L}(L^2)$	148
7.3	Short-Time Analysis of the Action.....	150
7.4	Estimates for the Parametrix and Convergence Results	154
8	Convergence in $\mathcal{L}(L^2)$ for Potentials in Kato-Sobolev Spaces	161
8.1	Summary	161
8.2	Sobolev Regularity of the Hamiltonian Flow	163
8.3	Sobolev Regularity of the Classical Action.....	172
8.4	Analysis of the Parametrices and Convergence Results	174
8.5	Higher-Order Parametrices	178
9	Convergence in the L^p Setting	183
9.1	Summary	183
9.2	Review of the Short Time Analysis in the Smooth Category	185
9.3	Wave Packet Analysis of the Schrödinger Flow	187
9.4	Convergence in L^p with Loss of Derivatives	190
9.5	The Case of Magnetic Fields	192
9.6	Sharpness of the Results	195
9.7	Extensions to the Case of Rough Potentials	197
	Bibliography	199
	Index	209
