General preface	vii
Preface	ix
1 The problem of fluency	1
The concept of fluency	1
The assessment of fluency	3
2 Some aspects of a preliminary model of speech production	7
Ideation function	8
Neurolinguistic program-planning function	9
Motor regulator function	13
Myodynamic execution function	14
Monitoring function	15
3 Some speech variables involved in an evaluation of fluency	26
Transition smoothness	26
Pausing	33
Syntactic correlates	37
Cognitive variables	39
Affective-state correlates	40
Social-interaction variables	40
Stylistic variables	41
Rhythmical patterning	41
Regulation of tempo	43
4 Stuttering: theories as to its nature and cause	49
Some organic theories of stuttering	50
Some psychogenic theories of stuttering	53
Stuttering as learned behaviour	55
The role of evaluation in the onset of stuttering	56
Popular concepts concerning the cause of stuttering	58

5	Developmental aspects of stuttering	66
	The development of fluency in children	66
	The development of disfluency in children	70
	Attitudes towards communication and the development of self-concepts in young stutterers	76
	The treatment of stuttering in children	80
	Recovery from stuttering in children	82
6	Stuttering in adults	84
	Overt manifestations	84
	Psychological aspects	90
	Assessment	91
	Assessing communication attitudes	95
	The effects of stuttering on communication for the speaker	97
	The effects of stuttering on communication for the listener	99
	Treatment	101
	Definition	106
7	Cluttering and disfluency of organic origin	107
	The etiology of cluttering	107
	The personality of the clutterer	111
	The relationship between cluttering and stuttering	113
	Effects of cluttering on communication for speaker and listener	114
	The treatment of cluttering	115
	Disfluency in Parkinson's disease	115
	Disfluency caused by dysarthria	116
	Treatment of dysarthria	117
	Articulatory dyspraxia	118
	Treatment of dyspraxia	119
	Loss of fluency in dysphasia	120
	Treatment of dysphasia	122
	The relationship between cluttering and organically-based disfluency	123
8	Some indications for future work	125
	Research needs in stuttering	127
	Research needs in cluttering	131
	Further research into the dysarthrias	133
	Further research into articulatory dyspraxia	134
	Conclusions	135
	Appendix: Phonetic transcription of disfluent speech	137
	References	145
	Index	159
