

# Table of Contents

1. Introduction	1
1.1. Brief look at the development of agriculture	1
1.2. Brief look at agricultural and rural research	5
1.3. Book outline	7
1.3.1. Unfolding and fading research themes	7
1.3.2. Foundations of knowledge and decisions	11
1.3.3. A handful of ideas for short-term research reorientation	12
1.3.4. Sustainable development: bundling ideas for shooting rapids on a voyage to an uncertain destination	13
1.3.5. Endnote	14
1.4. Autographic annotations	14
1.5. Scope of the book	15
1.6. References	16
2. Unfolding themes in agricultural and rural research	23
2.1. Introduction	23
2.1.1. Critical look at postmodern agriculture	23
2.1.2. Scope of the chapter	25
2.1.3. References	26
2.2. Classical integrated pest management and biological control: more questions than answers	28
2.2.1. Introduction	28
2.2.2. Biological control: definition and concepts	30
2.2.3. Classical IPM: definition and preliminary notes	32
2.2.4. Autographic annotations	36
2.2.5. Research contributions	37
2.2.6. Closing remarks	43
2.2.7. References	46
2.3. Spatial distributions and temporal dynamics of populations: building a basis for classical integrated pest management	52
2.3.1. Brief outline of theoretical developments	52
2.3.2. Spatial distributions and sampling plans	55

2.3.3. Temporal dynamics and mathematical models	58
2.3.4. Autographic annotations	65
2.3.5. Research contributions	65
2.3.6. Closing remarks	72
2.3.7. References	74
2.4. Spatial distribution functions, population dynamics and uncertainties: elusive attempts to strengthen classical integrated pest management	80
2.4.1. Introduction	80
2.4.2. Distributional models and sampling plans	81
2.4.3. Population system dynamics models	83
2.4.4. Uncertainty	85
2.4.5. Autographic annotations	87
2.4.6. Spatial distribution and sampling plan research	88
2.4.7. Population system dynamics research	91
2.4.8. Uncertainty assessment and risk management	104
2.4.9. Closing remarks	106
2.4.10. References	107
2.5. Redesign of agriculture: I. A shaky attempt to establish an environment-friendly and multifunctional agriculture	118
2.5.1. Introduction	118
2.5.2. A handful of concepts for redesign projects	120
2.5.3. Autographic annotations	128
2.5.4. Projection region	129
2.5.5. Authoritative redesign projects	131
2.5.6. Community initiatives	133
2.5.7. Closing remarks	144
2.5.8. References	148
2.6. Redesign of agriculture: II. Revised integrated pest management and agricultural sustainability enhancement projects	157
2.6.1. Introduction	157
2.6.2. Issues in system sustainability enhancement	161

2.6.2.1. Introductory concepts	161
2.6.2.2. Agricultural systems under external actor control	165
2.6.2.3. Rural systems under internal actor control	168
2.6.2.4. Technology systems	169
2.6.3. Autographic annotations and research contributions	173
2.6.3.1. Personal background information	173
2.6.3.2. Revised IPM concept	173
2.6.3.3. Agricultural systems under external actor control	178
2.6.3.4. Rural systems under internal actor control	185
2.6.3.5. Remarks on utilized technology systems	189
2.6.4. Closing remarks	190
2.6.5. References	192
2.7. Redesign of agriculture: III. Adaptive management of agricultural and rural systems	206
2.7.1. Introduction	206
2.7.2. Adaptive management	210
2.7.3. Autographic annotations and research contributions	215
2.7.3.1. Personal background information	215
2.7.3.2. Adaptive tsetse management in Ethiopia	216
2.7.3.3. Adaptive rural projects in Ethiopia	221
2.7.3.4. Adaptive management of grape leafhoppers	225
2.7.4. Closing remarks	233
2.7.5. References	235
2.8. Sustainable rural development: a glimpse into the past for exploring sustainability assessment approaches	244
2.8.1. Introduction	244
2.8.2. Sustainability assessment frameworks	248
2.8.2.1. Short-term development	248
2.8.2.2. Long-term development	252
2.8.3. Autographic annotations and research contributions	254
2.8.3.1. Personal background	254
2.8.3.2. Two diverse rural systems	254

2.8.3.3. Short-term sustainability changes	257
2.8.3.4. Long-term sustainability pattern analysis	264
2.8.4. Closing remarks	271
2.8.5. References	274
3. In search of philosophical support: foundations of knowledge and decisions	282
3.1. Introduction	282
3.2. Theory of knowledge and foundationalism	284
3.3. Autographic annotations	287
3.4. Foundations of ecological and ecological-social knowledge	288
3.5. Foundations of decisions	295
3. 6. Closing remarks	308
3.7. References	309
4. Fading themes and a handful of ideas for short-term reorientation of research	320
4.1. Introduction	320
4.2. Premises	321
4.2.1. Pathways to sustainability	321
4.2.2. Reductionism and holism in knowledge production	323
4.2.3. Fading research themes and sustainability science	324
4.3. Some lessons learned	327
4.4. Incremental knowledge production	330
4.5. Leaps in knowledge production	332
4.5.1. Relevance of philosophical thinking	333
4.5.2. Ethics for consideration	334
4.5.3. Critical assessment of philosophical doctrines	336
4.5.4. Postmodernism: some words of caution	338
4.5.5. Quantum philosophy	340
4.6. Closing remarks	343
4.7. References	344
5. Sustainable rural development: bundling ideas for shooting rapids on a voyage to an uncertain destination	353

5.1. Introduction	353
5.2. Basic knowledge for sharing among stakeholders	354
5.3. Voyage preparations	356
5.4. Redesign of agriculture	359
5.5. Adaptive rural system governance and navigation	360
5.6. Additional support for rural system governance and navigation	362
5.7. Closing remarks	364
5.8. References	366
6. Endnote	372
6.1. Obstacles to project design and execution	372
6.3. Recommendations for researchers and students	375
6.4. References	377
