
Table of Contents

Preface.....	ix
1. Introduction to Geospatial Analytics.....	1
Democratizing Data	2
Asking Data Questions	5
A Conceptual Framework for Spatial Data Science	7
Map Projections	9
Vector Data: Places as Objects	13
Raster Data: Understanding Spatial Relationships	15
Evaluating and Selecting Datasets	16
Summary	17
2. Essential Facilities for Spatial Analysis.....	19
Exploring Spatial Data in QGIS	20
Installing QGIS	20
Adding Basemaps to QGIS	21
Exploring Data Resources	24
Visualizing Environmental Complaints in New York City	24
Uploading Data to QGIS	25
Setting the Project CRS	29
Using the Query Editor to Filter Data	29
Visualizing Population Data	31
The QGIS Python Console	32
Loading a Raster Layer	34
Redlining: Mapping Inequalities	36
Summary	39

3. QGIS: Exploring PyQGIS and Native Algorithms for Spatial Analytics.	41
Exploring the QGIS Workspace: Tree Cover and Inequality in San Francisco	42
The Python Plug-in	44
Accessing the Data	46
Working with Layer Panels	48
Addressing the Research Question	50
Web Feature Service: Identifying Environmental Threats in Massachusetts	51
Accessing the Data	52
Discovering Attributes	54
Working with Iterators	56
Layer Styling	59
Using Processing Algorithms in the Python Console	59
Working with Algorithms	61
Extract by Expression	62
Buffer	62
Extract by Location	63
Summary	65
4. Geospatial Analytics in the Cloud: Google Earth Engine and Other Tools.	67
Google Earth Engine Setup	69
Using the GEE Console and geemap	69
Creating a Conda Environment	71
Opening the Jupyter Notebook	72
Installing geemap and Other Packages	72
Navigating geemap	74
Layers and Tools	75
Basemaps	77
Exploring the Landsat 9 Image Collection	78
Working with Spectral Bands	78
The National Land Cover Database Basemap	82
Accessing the Data	82
Building a Custom Legend	85
Leafmap: An Alternative to Google Earth Engine	86
Summary	89
5. OpenStreetMap: Accessing Geospatial Data with OSMnx.	91
A Conceptual Model of OpenStreetMap	92
Tags	92
Multidigraphs	94
Installing OSMnx	95
Choosing a Location	96
Understanding Arguments and Parameters	99

Calculating Travel Times	101
Basic Statistical Measures in OSMnx	104
Circuitry	104
Network Analysis: Circuitry in Paris, France	105
Betweenness Centrality	107
Network Types	109
Customizing Your Neighborhood Maps	110
Geometries from Place	111
Geometries from Address	111
Working with QuickOSM in QGIS	117
Summary	118
6. The ArcGIS Python API.....	119
Setup	119
Modules Available in the ArcGIS Python API	119
Installing ArcGIS Pro	120
Setting Up Your Environment	120
Installing Packages	121
Connecting to the ArcGIS Python API	122
Connecting to ArcGIS Online as an Anonymous User	122
Connecting to an ArcGIS User Account with Credentials	122
Exploring Imagery Layers: Urban Heat Island Maps	123
Raster Functions	127
Exploring Image Attributes	132
Improving Images	135
Comparing a Location over Multiple Points in Time	136
Filtering Layers	138
Summary	142
7. GeoPandas and Spatial Statistics.....	143
Installing GeoPandas	143
Working with GeoJSON files	144
Creating a GeoDataFrame	146
Working with US Census Data: Los Angeles Population Density Map	151
Accessing Tract and Population Data Through the Census API and FTP	152
Accessing Data from the Census API in Your Browser	156
Using Data Profiles	158
Creating the Map	160
Summary	163
8. Data Cleaning.....	165
Checking for Missing Data	165

Uploading to Colab	166
Nulls and Non-Nulls	169
Data Types	169
Metadata	169
Summary Statistics	171
Replacing Missing Values	175
Visualizing Data with Missingno	175
Mapping Patterns	178
Latitude and Longitude	179
Shapefiles	180
Summary	184
9. Exploring the Geospatial Data Abstraction Library (GDAL).....	185
Setting Up GDAL	186
Installing Spyder	186
Installing GDAL	187
Working with GDAL at the Command Line	187
Editing Your Data with GDAL	189
The Warp Function	190
Capturing Input Raster Bands	191
Working with the GDAL Library in Python	192
Getting Oriented in Spyder	192
Exploring Your Data in Spyder	194
Transforming Files in GDAL	195
Using the Binmask in GDAL	197
The Complete Script	199
Exploring Open Source Raster Files	200
USGS EarthExplorer	200
Copernicus Open Access Hub	204
Google Earth Engine	204
Summary	206
10. Using Python to Measure Climate Data.....	209
Example 1: Examining Climate Prediction with Precipitation Data	210
Goals	210
Downloading Your Data	210
Working in Xarray	211
Combining Your 2015 and 2021 Datasets	213
Generating the Images	217
More Exploration	219
Example 2: Deforestation and Carbon Emissions in the Amazon Rain Forest	
Using WTSS Series	220

Setup	221
Creating Your Map	223
Analysis	224
Refinements	225
Example 3: Modeling and Forecasting Deforestation in Guadeloupe with Forest at Risk	229
Setup	230
Plotting the Data	233
Sampling the Data	235
Correlation Plots	237
Modeling the Probability of Deforestation with the iCAR Model	239
The MCMC Distance Matrix	240
Modeling Deforestation Probability with predict_raster_binomial_iCAR	241
Carbon Emissions	244
Analysis	245
Summary	245
Additional Resources.....	247
Bibliography.....	249
Index.....	251
