

Contents

1	Introduction	1
1.1	Fibrations as Structure	1
1.2	Effective Kan Fibrations	4
1.3	Summary of Contents	8
 Part I Π-Types from Moore Paths		
2	Preliminaries	13
2.1	Fibred Structure	16
2.2	Double Categories of Left and Right Lifting Structures	19
2.3	Algebraic Weak Factorisation Systems	26
2.4	A Double Category of Coalgebras	31
2.5	Cofibrant Generation by a Double Category	37
2.6	Fibred Structure Revisited	38
2.7	Concluding Remark on Notation	40
3	An Algebraic Weak Factorisation System from a Dominance	43
4	An Algebraic Weak Factorisation System from a Moore Structure	49
4.1	Defining the Algebraic Weak Factorisation System	51
4.1.1	Functorial Factorisation	51
4.1.2	The Comonad	52
4.1.3	The Monad	53
4.1.4	The Distributive Law	53
4.2	Hyperdeformation Retracts	55
4.2.1	Hyperdeformation Retracts are Coalgebras	59
4.2.2	Hyperdeformation Retracts are Bifibred	62
4.3	Naive Fibrations	66
5	The Frobenius Construction	75
5.1	Naive Left Fibrations	77
5.2	The Frobenius Construction	79

6	Mould Squares and Effective Fibrations	87
6.1	A New Notion of Fibred Structure	90
6.2	Effective Fibrations	92
6.2.1	Effective Trivial Fibrations	94
6.2.2	Right and Left Fibrations	96
7	Π-Types	99
Part II Simplicial Sets		
8	Effective Trivial Kan Fibrations in Simplicial Sets	107
8.1	Effective Cofibrations	107
8.2	Effective Trivial Kan Fibrations	109
8.3	Local Character and Classical Correctness	116
9	Simplicial Sets as a Symmetric Moore Category	119
9.1	Polynomial Yoga	119
9.2	A Simplicial Poset of Traversals	122
9.3	Simplicial Moore Paths	124
9.4	Geometric Realization of a Traversal	129
10	Hyperdeformation Retracts in Simplicial Sets	137
10.1	Hyperdeformation Retracts Are Effective Cofibrations	137
10.2	Hyperdeformation Retracts as Internal Presheaves	138
10.3	A Small Double Category of Hyperdeformation Retracts	142
10.4	Naive Kan Fibrations in Simplicial Sets	159
11	Mould Squares in Simplicial Sets	167
11.1	Small Mould Squares	167
11.2	Effective Kan Fibrations in Terms of “Filling”	175
12	Horn Squares	181
12.1	Effective Kan Fibrations in Terms of Horn Squares	181
12.2	Local Character and Classical Correctness	201
13	Conclusion	205
13.1	Properties of Effective Kan Fibrations	205
13.2	Directions for Future Research	206
A	Axioms	207
A.1	Moore Structure	207
A.2	Dominance	212
B	Cubical Sets	213
C	Degenerate Horn Fillers Are Unique	215
D	Uniform Kan Fibrations	217
	References	225
