

THE LOGIC OF RELIABLE INQUIRY

KEVIN T. KELLY

New York Oxford
OXFORD UNIVERSITY PRESS
1996

Contents

1. Introduction, 3

2. Reliable Inquiry, 11

1. Background Assumptions, 11
2. Methods and Data Streams, 11
3. Data Protocols, 14
4. Truth and Global Underdetermination, 16
5. The Philosophy of Global Underdetermination, 19
6. The Philosophy of Local Underdetermination, 24
7. Scientific Realism, Probability, and Subjunctives, 30
8. The Logic of Reliable Inquiry, 35

3. The Demons of Passive Observation, 38

1. Introduction, 38
2. Decidability with a Deadline, 42
3. Decidability, Verifiability, and Refutability with Certainty, 48
4. Verification, Refutation, and Decision in the Limit, 51
5. Decision with n Mind Changes, 64
6. Gradual Verification, Refutation, and Decision, 66
7. Optimal Background Assumptions, 69
8. Exercises, 71

- 4. Topology and Ideal Hypothesis Assessment, 74**
 1. Introduction, 74
 2. Basic Topological Concepts, 74
 3. The Baire Space, 78
 4. Restricted Topological Spaces, 83
 5. A Characterization of Bounded Sample Decidability, 83
 6. Characterizations of Certain Assessment, 85
 7. Characterizations of Limiting Assessment, 88
 8. Efficient Data Use, 96
 9. A Characterization of n -Mind-Change Decidability, 103
 10. A Demon-Oriented Characterization of n -Mind-Change Decidability, 108
 11. Characterizations of Gradual Assessment, 113
 12. The Levels of Underdetermination, 115
 13. Exercises, 117

- 5. Reducibility and the Game of Science, 121**
 1. Introduction, 121
 2. Ideal Inductive Methods as Continuous Operators on the Baire Space, 122
 3. Assessment as Reduction, 124
 4. Ideal Transcendental Deductions as *Cnt*-Completeness Theorems, 127
 5. Inductive Demons as Continuous Counterreductions, 128
 6. Science as a Limiting Game, 130
 7. Exercises, 136

- 6. The Demons of Computability, 138**
 1. Introduction, 138
 2. Church Meets Hume, 138
 3. Programs as Reliable Methods, 140
 4. The Arithmetical Hierarchy, 143
 5. Uncomputability and Diagonalization, 144
 6. The Demons of Uncomputability, 146
 7. Some Disanalogies, 155
 8. Exercises, 157

7. Computers in Search of the Truth, 158

1. Ideal Epistemology and Computability, 158
2. Computation as Internalized Inductive Inquiry, 160
3. The Arithmetical Hierarchy over the Baire Space, 162
4. Universal Relations and Hierarchy Theorems, 165
5. Characterization Theorems, 169
6. Data-Minimal Computable Methods, 173
7. The Empirical Irony of Cognitive Science, 175
8. The Computable Assessment of Uncomputable Theories, 176
9. Ideal Norms and Computational Disasters, 183
10. Computable Inquiry, 186
11. Exercises, 187

8. So Much Time, Such Little Brains, 190

1. Introduction, 190
2. Finite State Automata, 191
3. Regular Sets, 193
4. Scientific Automata, 194
5. Scientific Automata and Certainty, 194
6. Scientific Automata in the Limit, 195
7. Limiting Regular Expressions, 203
8. ω -Expressions, 206
9. The Inductive Power of Indeterminism, 208
10. Primitive Recursion, 212
11. The Empirical Irony of Cognitive Science Revisited, 214
12. Exercises, 216

9. The Logic of Ideal Discovery, 217

1. Introduction, 217
2. Basic Definitions, 219
3. Assessment as Discovery, 222
4. Conjectures and Refutations, 222
5. A Complete Architecture for Discovery, 226
6. Data-Minimal Limiting Discovery, 230
7. Discovery with Bounded Mind Changes, 233

8. A Characterization of Almost Stable Identification in the Limit, 234
 9. Unstable Identification in the Limit, 240
 10. Gradual Identification, 241
 11. Exercises, 244
-
- 10. Computerized Discovery, 246**
 1. Introduction, 246
 2. Computable Hypothesis Enumerations, 246
 3. Characterization, 252
 4. Function Identification, 253
 5. Cognitive Science Revisited, 258
 6. Exercises, 259
-
- 11. Prediction, 260**
 1. Introduction, 260
 2. Ideal Extrapolation, 260
 3. Computable Extrapolation, 262
 4. Exercises, 267
-
- 12. Inquiry Concerning First-Order Theories, 269**
 1. Introduction, 269
 2. Logical Hypothesis Assessment from Complete, True Data, 270
 3. Truth and Underdetermination, 272
 4. Quantifier Prefix Complexity, 273
 5. An Example, 274
 6. Data Complexity, 276
 7. Theories and Axiomatizations, 287
 8. Theory Discovery, 292
 9. Discovery and Vocabulary, 296
 10. Exercises, 301
-
- 13. Probability and Reliability, 302**
 1. Introduction, 302
 2. Conditionalization, 303

3. Probabilistic Reliability, 317
 4. Countable Additivity, 321
 5. Probabilistic Reliability without Countable Additivity, 327
 6. Probabilistic Mathematics and Nonprobabilistic Science, 330
 7. Probabilistic Theories, 333
 8. Conclusion, 337
 9. Proofs of Propositions 13.18 and 13.20, 338
 10. Exercises, 345
-
- 14. Experiment and Causal Inference, 347**
 1. Introduction, 347
 2. Systems, 348
 3. Causation and Manipulation, 352
 4. Variable Causation, 358
 5. Experimental Methods, 362
 6. The Course of Experimental Inquiry, 363
 7. Hypothesis Correctness and Background Knowledge, 364
 8. Experimental Reliability, 365
 9. Dreaming and the Principle of Plenitude, 366
 10. Weakened Assumptions and Global Underdetermination, 371
 11. Exercises, 374
-
- 15. Relativism and Reliability, 376**
 1. Introduction, 376
 2. Relativism, Truth, and Interpersonal Agreement, 380
 3. Relativistic Reliabilism, 383
 4. Functional vs. Metaphysical Relativism, 385
 5. Causal vs. Semantic Relativism, 386
 6. Acts, Scientists, and Worlds-in-Themselves, 387
 7. Transcendental Background Knowledge, 389
 8. The Course of Relativistic Inquiry, 389
 9. Relativistic Hypothesis Assessment, 390
 10. Relativistic Hypothesis Assessment as Nonrelativistic Discovery, 392
 11. Relativistic Theory Discovery, 393
