Contents

1 Introductory Material 1
- 1.1 Various Maximal Functions 1
- 1.2 Nontangential Convergence 6
- 1.3 Unrestricted Convergence 16
- 1.4 The Area Integral 19
- 1.5 Generalizations of $\mathbb{R}_+$ and $H^p(\mathbb{R}_+)$ 22
- 1.6 Relationships Among Domains 33

2 More on Hardy Spaces 35
- 2.1 Hardy Spaces and Maximal Functions 35
- 2.2 More Maximal Functions 43
- 2.3 Real Variable H^p 51
- 2.4 Some Thoughts on Summability 59

3 Background on H^p Spaces 73
- 3.1 Where Did H^p Spaces Get Started? 73
- 3.2 Hardy Spaces in $\mathbb{C}^1$ 76
- 3.3 The Hardy–Littlewood Maximal Function 86
- 3.4 The Poisson Kernel and Fourier Inversion 93

4 Hardy Spaces on D 101
- 4.1 The Role of the Hilbert Transform 101
- 4.2 Blaschke Products 120
- 4.3 Passage from D to $\mathbb{R}^2_+$ 129

5 Hardy Spaces on $\mathbb{R}^n$ 137
- 5.1 The Poisson Kernel on the Ball 137
- 5.2 The Poisson Kernel on the Upper Halfspace 140
- 5.3 Cauchy–Riemann Systems 149
- 5.4 A Characterization of H^p, $p > 1$ 159
- 5.5 The Area Integral 163
- 5.6 Applications of the Maximal Function Characterization 179
- 5.7 $H^1(\mathbb{R}^n)$ and Duality with Respect to *BMO* 206

6 Developments Since 1974 227
6.1 The Atomic Theory 227
6.2 The Local Theory of Hardy Spaces 228
6.3 The Work of Chang/Krantz/Stein on Hardy Spaces for Elliptic Boundary Value Problems 231
6.4 Multi-Parameter Harmonic Analysis 232
6.5 The $T1$ Theorem of David/Journé 233
6.6 Contributions of Tom Wolff 233
6.7 Wavelets 234
6.7.1 Localization in the Time and Space Variables 234
6.7.2 Building a Custom Fourier Analysis 235
6.7.3 The Haar Basis 237

7 Concluding Remarks 243
