Table of Contents

Introduction 1

PART ONE: *On neural networks in the retina and the problem of objectivity*

1. Ernst Mach (1838-1916) 7
2. Mach bands 37
3. Mathematical models of neural networks 77
4. The functional significance of inhibitory interaction 143
5. Appearance and reality 208

PART TWO: *Mach's papers on the interdependence of retinal points*

Translator's note 252

1. On the effect of the spatial distribution of the light stimulus on the retina 253
2. On the physiological effect of spatially distributed light stimuli 272
3. On the physiological effect of spatially distributed light stimuli 285
4. On the physiological effect of spatially distributed light stimuli 299

5. On the dependence of retinal points on one another 307
6. On the influence of spatially and temporally varying light stimuli on visual perception 321
