

Contents

1	First Steps	1
1.1	Prologue: Gambler's Ruin	1
1.2	Groups and Their Cayley Graphs	3
1.3	Random Walks: Definition	9
1.4	Recurrence and Transience	12
1.5	Symmetric Random Walks on \mathbb{Z}^d	16
1.6	Random Walks on $\mathbb{Z}_2 * \mathbb{Z}_2 * \mathbb{Z}_2$	18
1.7	Lamplighter Random Walks	24
1.8	Excursions of Recurrent Random Walks [†]	29
2	The Ergodic Theorem	33
2.1	Formulation of the Theorem	33
2.2	The Range of a Random Walk	37
2.3	Cut Points of a Random Walk	39
2.4	Proof of the Ergodic Theorem	45
2.5	Non-Ergodic Transformations [†]	49
3	Subadditivity and Its Ramifications	57
3.1	Speed of a Random Walk	57
3.2	Subadditive Sequences	58
3.3	Kingman's Subadditive Ergodic Theorem	62
3.4	The Trail of a Lamplighter	64
3.5	Proof of Kingman's Theorem [†]	68
4	The Carne-Varopoulos Inequality	73
4.1	Statement and Consequences	73
4.2	Chebyshev Polynomials	75
4.3	A Transfer Matrix Inequality	77
4.4	Markov Operators	80
5	Isoperimetric Inequalities and Amenability	87
5.1	Amenable and Nonamenable Groups	87
5.2	Klein's Ping-Pong Lemma	90

5.3	Kesten's Theorem: Amenable Groups	92
5.4	The Dirichlet Form	93
5.5	Sobolev-Type Inequalities	95
5.6	Kesten's Theorem: Nonamenable Groups.....	96
5.7	Nash-Type Inequalities.....	97
6	Markov Chains and Harmonic Functions	107
6.1	Markov Chains	107
6.2	Harmonic and Superharmonic Functions	112
6.3	Space-Time Harmonic Functions [†]	116
6.4	Reversible Markov Chains [†]	118
7	Dirichlet's Principle and the Recurrence Type Theorem	123
7.1	Dirichlet's Principle	123
7.2	Rayleigh's Comparison Principle.....	130
7.3	Varopoulos' Growth Criterion	133
7.4	Induced Random Walks on Subgroups	134
8	Martingales.....	139
8.1	Martingales: Definitions and Examples	140
8.2	Doob's Optional Stopping Formula	142
8.3	The Martingale Convergence Theorem	145
8.4	Martingales and Harmonic Functions [†]	149
8.5	Reverse Martingales.....	151
9	Bounded Harmonic Functions	155
9.1	The Invariant σ -Algebra I.....	155
9.2	Absolute Continuity of Exit Measures	159
9.3	Two Examples	161
9.4	The Tail σ -Algebra T	165
9.5	Weak Ergodicity and the Liouville Property	168
9.6	Coupling	170
9.7	Tail Triviality Implies Weak Ergodicity	174
10	Entropy	177
10.1	Avez Entropy and the Liouville Property	177
10.2	Shannon Entropy and Conditional Entropy	178
10.3	Avez Entropy	180
10.4	Conditional Entropy on a σ -Algebra	182
10.5	Avez Entropy and Boundary Triviality	185
10.6	Entropy and Kullback-Leibler Divergence.....	187
11	Compact Group Actions and Boundaries.....	191
11.1	Γ -Spaces	191
11.2	Stationary and Invariant Measures	194
11.3	Transitive Group Actions	198
11.4	μ -Processes and μ -Boundaries	200
11.5	Boundaries and Speed.....	206

11.5.1	A. Random Walks on \mathbb{F}_k	206
11.5.2	B. Random Walks on $SL(2, \mathbb{Z})$	208
11.6	The Busemann Boundary	211
11.7	The Karlsson–Ledrappier Theorem	215
12	Poisson Boundaries	221
12.1	Poisson and Furstenberg–Poisson Boundaries	221
12.2	Entropy of a Boundary	227
12.3	Lamplighter Random Walks [†]	233
12.4	Existence of Poisson Boundaries	238
13	Hyperbolic Groups	243
13.1	Hyperbolic Metric Spaces	243
13.2	Quasi-Geodesics.....	248
13.3	The Gromov Boundary of a Hyperbolic Space	254
13.4	Boundary Action of a Hyperbolic Group	263
13.5	Random Walks on Hyperbolic Groups	269
13.6	Cannon’s Lemma.....	273
13.7	Random Walks: Cone Points	276
14	Unbounded Harmonic Functions	283
14.1	Lipschitz Harmonic Functions.....	283
14.2	Virtually Abelian Groups [†]	285
14.3	Existence of Harmonic Functions	292
14.4	Poincaré and Cacciopoli Inequalities	298
14.5	The Colding–Minicozzi–Kleiner Theorem	301
14.5.1	A. Preliminaries: Positive Semi-Definite Matrices.....	303
14.5.2	B. Preliminaries: Efficient Coverings.....	305
14.5.3	C. The Key Estimate.....	306
14.5.4	D. Bounded Doubling	307
14.5.5	E. The General Case.....	309
15	Groups of Polynomial Growth	313
15.1	The Kleiner Representation.....	313
15.2	Subgroups of \mathbb{U}_D	318
15.3	Milnor’s Lemma.....	325
15.4	Sub-cubic Polynomial Growth.....	327
15.5	Gromov’s Theorem.....	331
A	A 57-Minute Course in Measure–Theoretic Probability	341
A.1	Definitions, Terminology, and Notation	341
A.2	Sigma Algebras.....	342
A.3	Independence	344
A.4	Lebesgue Space	346
A.5	Borel–Cantelli Lemma	346
A.6	Hoeffding’s Inequality	348
A.7	Weak Convergence	349

A.8	Likelihood Ratios	352
A.9	Conditional Expectation	354
References	359
