Contents

1 Introduction and Main Results 1
- 1.1 Objective of the Monograph 1
- 1.2 The Elliptic Equation 3
- 1.3 The Critical Numbers 4
- 1.4 Square Root Problem and Hardy Spaces 6
- 1.5 Main Results on Dirichlet Problems 7
- 1.6 Dirichlet Problems with Fractional Spaces of Data 13
- 1.7 Neumann Problems 18
- 1.8 Synthesis 20
- 1.9 Notation 21

2 Preliminaries on Function Spaces 23
- 2.1 Lebesgue Spaces and Distributions 23
- 2.2 Tent Spaces 24
- 2.3 Z-spaces 26
- 2.4 Hardy Spaces 27
- 2.5 Homogeneous Smoothness Spaces 28
- 2.6 Interpolation Functors 31

3 Preliminaries on Operator Theory 33
- 3.1 Definition of the Elliptic Operators 33
- 3.2 (Bi)sectorial Operators 34
- 3.3 Classes of Holomorphic Functions 35
- 3.4 Holomorphic Functional Calculi 36
- 3.5 Adjoints 39
- 3.6 Kato Problem and Riesz Transform 39
- 3.7 Off-Diagonal Estimates 40

4 $H^p - H^q$ Bounded Families 43
- 4.1 Abstract Principles 43
- 4.2 Off-Diagonal Estimates 45
- 4.3 Interpolation Principles 50
- 4.4 Applications to the Functional Calculus 53

5 Conservation Properties 57

6 The Four Critical Numbers 63
6.1 General Facts on Critical Numbers 64
6.2 Worst-Case Estimates for the Critical Numbers 69
6.3 a-Independence of Critical Numbers 70

7 Riesz Transform Estimates: Part I 73
7.1 Sufficient Condition for $1 < p < 2$ 75
7.2 Sufficient Condition for $p > 2$ 78
7.3 Necessary Condition for $1 < p < 2$ 82
7.4 Necessary Condition for $p > 2$ 82

8 Operator-Adapted Spaces 85
8.1 Bisectorial Operators with First-Order Scaling 86
8.2 Sectorial Operators with Second-Order Scaling 90
8.3 Molecular Decomposition for Adapted Hardy Spaces 92
8.4 Connection with the Non-tangential Maximal Function 98
8.5 D-Adapted Spaces 103
8.6 Spaces Adapted to Perturbed Dirac Operators 107

9 Identification of Adapted Hardy Spaces 111
9.1 Identification Regions 111
9.2 The Identification Theorem 114
9.3 Consequences for Square Functions 135

10 A Digression: H^∞-Calculus and Analyticity 141

11 Riesz Transform Estimates: Part II 143

12 Critical Numbers for Poisson and Heat Semigroups 147
12.1 Identification of the Critical Heat Numbers 150
12.2 Identification of the Critical Poisson Numbers 152
12.3 More on Off-diagonal Decay for the Poisson Semigroup 156

13 L^p Boundedness of the Hodge Projector 159
13.1 Compatible Adapted Hodge Decompositions 161
13.2 Adapted Hodge Decompositions 164
13.3 Characterizations of $\mathcal{P}(L_0)$ 166

14 Critical Numbers and Kernel Bounds 169
14.1 Consequences of $p_-(L) < 1$ 169
14.2 Equivalence with Kernel Estimates 172
14.3 Dirichlet Property, Stability, and Examples 176
14.4 Remarks on Multiplicative Perturbations 179
14.5 Kernel estimates for $L = -a^{-1}\Delta_x$ 180

15 Comparison with the Auscher–Stahlhut Interval 185

16 Basic Properties of Weak Solutions 189
16.1 Energy Solutions 190
16.2 Semigroup Solutions 192
16.3 Interior Estimates 193

17 Existence in H^p Dirichlet and Regularity Problems 197
17.1 Estimates Toward the Dirichlet Problem 197
17.2 Estimates Toward the Regularity Problem 205
17.3 Conclusion of the Existence Part 209

18 Existence in the Dirichlet Problems with $\dot{\Lambda}^\alpha$-Data 213

19 Existence in Dirichlet Problems with Fractional Regularity Data 237
19.1 Fractional Identification Regions 237
19.2 Solvability for Fractional Regularity Data 241

20 Single Layer Operators for $\mathcal{L}$ and Estimates for $\mathcal{L}^{-1}$ 253

21 Uniqueness in Regularity and Dirichlet Problems 259
21.1 The Strategy of Proof 259
21.2 Uniqueness for $(R)_p^{\mathcal{L}}$—Conclusion of the Proof of Theorem 1.2 263
21.3 Uniqueness for $(D)_p^{\mathcal{L}}$—Conclusion of the Proof of Theorem 1.1 270
21.4 Uniqueness for $(\widetilde{D})_{\dot{\Lambda}^\alpha}^{\mathcal{L}}$ 274
21.5 Uniqueness for $(D)_{\dot{\Lambda}^\alpha}^{\mathcal{L}}$—Conclusion of the Proof of Theorem 1.3 275
21.6 Uniqueness for $(D)_{\dot{X}^{s,p}}^{\mathcal{L}}$—Conclusion of the Proof of Theorem 1.4 278

22 The Neumann Problem 283

A Non-tangential Maximal Functions and Traces 287

B The L^p-Realization of a Sectorial Operator in L^2 299
