Contents

1 Introduction 1
- 1.1 Fluid Mechanics and Pseudo-Monotone Operator Theory: A Never-Ending Love Affair or Merely an On-Off Relationship?.... 2
- 1.2 Electro-Rheological Fluids 7
- 1.3 Aims and Outline of This Manuscript..... 10
  - 1.3.1 Main Part..... 10
  - 1.3.2 Extensions..... 13

2 Preliminaries 15
- 2.1 Theory of Pseudo-Monotone Operators..... 15
- 2.2 Variable Exponent Spaces 16
  - 2.2.1 Classical Function Spaces 16
  - 2.2.2 Variable Lebesgue Spaces 17
  - 2.2.3 Duality in Variable Lebesgue Spaces 20
  - 2.2.4 Variable Sobolev Spaces 21
  - 2.2.5 The Hardy–Littlewood Maximal Operator and log-Hölder Continuity 23
  - 2.2.6 Mollification in $L^{p(\cdot)}(\mathbb{R}^n)$ 25
- 2.3 Banach-Valued Function Spaces 26
  - 2.3.1 Banach-Valued Classical Function Spaces 26
  - 2.3.2 Bochner–Lebesgue Spaces 27
  - 2.3.3 Bochner–Sobolev Spaces..... 31
  - 2.3.4 Advanced Theory of Pseudo-Monotone Operators for Evolution Equations 34

Part I Main Part

3 Variable Bochner–Lebesgue Spaces..... 43
- 3.1 The Spaces $\mathcal{X}_{\nabla}^{q,p}(Q_T)$ and $\mathcal{X}_{\varepsilon}^{q,p}(Q_T)$ 45
- 3.2 Duality in $\mathcal{X}_{\varepsilon}^{q,p}(Q_T)$..... 52
- 3.3 Embedding Theorems for $\mathcal{X}_{\varepsilon}^{q,p}(Q_T)$ 57
- 3.4 Smoothing in $\mathcal{X}_{\varepsilon}^{q,p}(Q_T)$..... 69

3.5 The Spaces $\mathring{\mathcal{X}}^{q,p}_{\nabla}(Q_T)$ and $\mathring{\mathcal{X}}^{q,p}_{\varepsilon}(Q_T)$ 83
3.6 Generalized Time Derivative in $\mathring{\mathcal{X}}^{q,p}_{\varepsilon}(Q_T)^*$ 85
3.7 Formula of Integration-by-Parts for $\mathcal{W}^{q,p}_{\varepsilon}(Q_T)$ 90
3.8 Abstract Existence Result for Lipschitz Domains 98
3.9 Application to Model Problem 104

4 Solenoidal Variable Bochner–Lebesgue Spaces 113
4.1 The Spaces $\mathcal{V}^{q,p}_{\nabla}(Q_T)$ and $\mathcal{V}^{q,p}_{\varepsilon}(Q_T)$ 114
4.2 Duality in $\mathcal{V}^{q,p}_{\varepsilon}(Q_T)$ 117
4.3 Smoothing in $\mathcal{V}^{q,p}_{\varepsilon}(Q_T)$ 125
4.3.1 Failure of Smoothing via Bogovskiĭ Correction 125
4.3.2 Smoothing via Transversal Expansion of Lipschitz Domains 128
4.4 The Spaces $\mathring{\mathcal{V}}^{q,p}_{\nabla}(Q_T)$ and $\mathring{\mathcal{V}}^{q,p}_{\varepsilon}(Q_T)$ 153
4.5 Generalized Time Derivative in $\mathring{\mathcal{V}}^{q,p}_{\varepsilon}(Q_T)^*$ 157
4.6 Formula of Integration-by-Parts for $\mathcal{W}^{q,p}_{\varepsilon,\sigma}(Q_T)$ 160

5 Existence Theory for Lipschitz Domains 177
5.1 Bochner Pseudo-Monotonicity, Bochner Condition (M) and Bochner Coercivity 178
5.2 The Hirano–Landes Approach 189
5.3 C^0-Bochner Pseudo-Monotonicity, C^0-Bochner Condition (M) and C^0-Bochner Coercivity 204
5.4 Abstract Existence Theorem for Lipschitz Domains and $p^- \geq 2$ 211
5.5 Application to Model Problems 217
5.5.1 Unsteady $p(\cdot,\cdot)$-Stokes Equations in a Lipschitz Domain with $p^- \geq 2$ 218
5.5.2 Unsteady $p(\cdot,\cdot)$-Navier–Stokes Equations in a Lipschitz Domain with $p^- \geq \frac{3d+2}{d+2}$ 219

Part II Extensions

6 Pressure Reconstruction 225
6.1 Pressure Reconstruction 225
6.2 Application to Model Problems 237
6.3 Applicability of Parabolic L^∞- and Lipschitz Truncation 240
6.3.1 Parabolic L^∞- and Lipschitz Truncation 240
6.3.2 Parabolic Solenoidal Lipschitz Truncation 241

7 Existence Theory for Irregular Domains 245
7.1 Bochner–Sobolev Condition (M) 246
7.2 L^1-Monotonicity 253
7.2.1 Finite Radon Measures 255
7.2.2 Minty–Trick Like Argument for L^1-Monotone Operators 257

7.3 Anisotropic Variable Exponent Bochner–Lebesgue Spaces 260
7.3.1 The Space $\mathcal{X}^{q,p,s}_{\boldsymbol{\varepsilon},\mathrm{div}}(Q_T)$ 261
7.3.2 Duality in $\mathcal{X}^{q,p,s}_{\boldsymbol{\varepsilon},\mathrm{div}}(Q_T)$ 262
7.3.3 Smoothing in $\mathcal{X}^{q,p,s}_{\boldsymbol{\varepsilon},\mathrm{div}}(Q_T)$ 263
7.3.4 Generalized Time Derivative in $\mathcal{X}^{q,p,s}_{\boldsymbol{\varepsilon},\mathrm{div}}(Q_T)^*$ and Formula of Integration-by-Parts for $\mathcal{W}^{q,p,s}_{\boldsymbol{\varepsilon},\mathrm{div}}(Q_T)$ 268
7.4 First Parabolic Compensated Compactness Principle 274
7.5 Abstract Existence Result for Irregular Domains and $p^- \geq 2$ 289
7.6 Application to Model Problems 293
7.6.1 Unsteady $p(\cdot,\cdot)$-Stokes Equations in an Irregular Domain with $p^- \geq 2$ 293
7.6.2 Unsteady $p(\cdot,\cdot)$-Navier–Stokes Equations in an Irregular Domain with $p^- > \frac{3d+2}{d+2}$ 295

8 Existence Theory for $p^- < 2$ 297
8.1 Second Parabolic Compensated Compactness Principle 301
8.2 Unsteady $p(\cdot,\cdot)$-Navier–Stokes Equations in an Irregular Domain with $p^- > \frac{3d}{d+2}$ 323
8.3 Unsteady $p(\cdot,\cdot)$-Stokes Equations in an Irregular Domain with $p^- > \frac{2d}{d+2}$ 329

9 Appendix 331
9.1 Point-Wise Poincaré Inequality for the Symmetric Gradient 331
9.2 Generalized Lebesgue Differentiation Theorem 340
9.3 Portemanteau Theorem for Weak-* Convergence 344
