

Table of contents

Preface

A. INTRODUCTION

I. Introduction	3
1. What is naturalness?	3
2. Inflection and word formation	4
3. Towards a theory of morphological naturalness	7
4. The structure of a theory of naturalness	8
5. Evidence for naturalness	12
6. The semiotic framework of natural morphology	15
7. Divergences and convergences among proponents of natural approaches to morphology	18
Notes	20

B. NATURALNESS IN INFLECTION

I. System-independent morphological naturalness	25
Willi Mayerthaler	
0. Introduction	25
1. Universal grammar and markedness	31
2. Preference theories	33
2.1. Preferences, open systems, and some misunderstandings	34
2.2. On the relation of preference theories and the theory of grammar	38
2.3. Foundations of markedness relations	39
3. Some other prerequisites of theoretical morphology	42
3.1. Some remarks about the lexicon	44
3.1.1. Which word classes are supposed to be universal?	46

4.	Principles of morphological markedness theory	48
4.1.	Summary of symbolic generalizations	50
5.	What is a 'theory'?	52
5.1.	Shortcomings of system-independent naturalness theory	53
6.	Appendix on attractors in catastrophe theory	55
	Notes	57
II.	System-dependent morphological naturalness in inflection	59
	Wolfgang U. Wurzel	
0.	Naturalness, morphology and language system	59
1.	System-dependent naturalness I: System-congruity	62
1.1.	System-defining structural properties and system-congruity	62
1.2.	System-defining structural properties and morphological change	65
1.3.	System-congruity and system-independent naturalness	69
1.4.	Example: Noun inflection in New High German	71
2.	System-dependent naturalness II: Stability of inflectional classes	76
2.1.	Structure of inflectional paradigms: Implicative paradigm structure conditions	76
2.2.	Dominant paradigm structure conditions, stable and unstable inflectional classes	78
2.3.	Superstable markers	82
2.4.	Change in the stability of inflectional classes	83
2.5.	Stability of inflectional classes and system-independent naturalness	86
3.	System-congruity and class-stability: Productivity in inflectional morphology	87
3.1.	Primary productivity	87
3.2.	Secondary productivity	90
4.	Naturalness principles of inflectional morphology	92
	Notes	94

C. NATURALNESS IN WORD FORMATION

I. Word formation as part of natural morphology	99
Wolfgang U. Dressler	
1. Introduction	99
2. Iconicity in word formation	101
2.1. Images and diagrams	101
2.2. Diagrammaticity of compounds	101
2.3. Constructional iconicity	102
2.4. Morphotactic transparency	102
2.5. Conversion and suppletion	103
2.6. Subtraction	104
2.7. Scales of naturalness	104
2.8. Predictions	105
2.9. Typological prospect	110
3. Indexicality in word formation	110
4. The scale of (bi)uniqueness in word formation	111
5. Signans shapes adequate for motivation in word formation	116
6. Typological adequacy of word formation rules	118
7. System adequacy (congruity) of word formation rules	121
8. Inflection vs. derivation again	123
Notes	124
II. Productivity and diachronic change in morphology	127
Oswald Panagl	
0. Introduction	127
1. Interpretations of productivity	128
1.1. Quantitative criterion	131
1.2. Qualitative criterion	131
1.3. Grammatical criterion	131
1.4. Typological criterion	131
2. Vedic root-nouns and Ancient Greek diminutives	132
3. Semantic predictability (transparency)	133
4. Transition from word formation into inflection	134
5. Hierarchy of productivity in types of word formation	136

6.	Conclusion on productivity in corpus languages <i>The Latine Supine in -(t)um — a Case Study of Categorical Change</i>	137
7.	From derivational to inflectional morphology	137
8.	Reasons for loss of productivity	143
9.	Indo-European cognates	149
	Notes	150
	Abbreviations	153
	General bibliography	155
	Subject index	165
