FOREWORD	xi
1. <i>Technology, Productivity and Economic Analysis</i>	1
BY BELA GOLD	
A. The Prevailing Mythology	1
B. Initial Empirical Perspectives on Productivity and Cost Effects	3
1. <i>Technological Innovations and Expected Effects</i>	3
2. <i>Actual Findings</i>	4
C. Implications for Revising the Analytical Framework	13
1. <i>Analyzing Productivity Effects</i>	13
2. <i>Analyzing Cost and Broader Economic Effects</i>	17
3. <i>Some Implications for Wage-Price Policies</i>	18
D. Empirically Rooted Hypotheses Concerning Effects of Innovations	19
1. <i>Productivity-Factor Price Interactions</i>	19
2. <i>Factor Proportions and Cost Proportions</i>	22
3. <i>Innovation-Cost-Profitability Interactions</i>	22
E. Needed Revisions in Economic Concepts and Measures	25
1. <i>Technological Change, Outputs, Inputs and Prices</i>	25
2. <i>Productivity, Costs and Capacity</i>	31
3. <i>Some Additional Measurement Requirements</i>	36
F. Concluding Observations	38
<i>References</i>	39
2. <i>Technological Change, Managerial Incentives and Environmental Effects</i>	43
BY GERHARD ROSEGGER	
A. The Problem and Prevailing Approaches	43
B. The Production System and its Demands on the Environment	45
1. <i>Materials Flows</i>	45
2. <i>Recycling Activities</i>	47
C. Innovations and Environmental Effects	49

D.	Technological Change, Conversion Efficiency and Recycling	54
	1. Basic Materials Inputs	54
	2. Energy Inputs	57
	3. Scrap Consumption	59
E.	Summary and Conclusions	62
	References	63
3.	<i>Scale, Costs and Environmental Pressures</i>	65
	BY DAVID A. HUETTNER	
A.	Some Basic Concepts and Analytical Problems	65
B.	Scale Economies of Fossil-fuel Plants	69
C.	Scale Economies of Light-water Nuclear Plants	78
D.	Investment and Cost Effects of Pollution-Control Equipment	85
	1. Thermal Pollution	85
	2. Air Pollution	86
E.	Transmission and Generation in an Interconnected System	92
F.	Diffusion of Nuclear Plants	98
G.	Further Perspectives on Long Term Trends	101
	References	104
4.	<i>Changing Technology and Optimal Industry Structure</i>	107
	BY JOHN H. LANDON	
A.	Theoretical Overview	107
	1. Single Process Dynamics	108
	2. Multiple Unit Complications	111
B.	The Case of Communications Technologies	114
	1. From Wire to Microwave	114
	2. Beyond Microwave	116
C.	The Case of Electric Power Technology	118
	1. Slow Adaptation to Scale Economies	118
	2. New Technologies	122
D.	Concluding Observations	124
	References	124

5. <i>Diffusion of Major Technological Innovations</i>	129
BY BELA GOLD, WILLIAM S. PEIRCE AND GERHARD ROSEGGER	
A. Basic Questions and Approach	129
B. Actual Rates of Diffusion	130
C. Diffusion Rates and Growth of Output	133
D. Exploratory Diffusion Models	136
E. Illustrative Applications	138
F. Towards a Broader Analytical Framework	140
1. <i>Decision-making Processes</i>	140
2. <i>The Decision Model</i>	142
3. <i>The Innovation</i>	146
<i>References</i>	147
6. <i>The Effects of Technological Change: Exploring Successive Ripples</i>	149
BY WILLIAM S. PEIRCE	
A. The Taconite Process	150
B. Costs in a Broader Framework	151
1. <i>Pellet Costs</i>	151
2. <i>Unit Cost of Hot Pig Iron</i>	151
C. Capital Requirements in a Broader Framework	153
1. <i>Capital Requirements up to the Blast Furnace</i>	153
2. <i>Capital Requirements for Blast Furnaces</i>	156
D. Environmental Impacts in a Broader Framework	159
E. Further Ripples	162
1. <i>The First Ripple</i>	162
2. <i>The Second Ripple</i>	163
3. <i>Future Ripples</i>	164
F. Some Implications for Management	166
Appendix: Changes in Energy Inputs as a Result of Pelletizing	167
<i>References</i>	168
Index	169
